UNDERGRADUATE

Rider University's Vision and Mission

Rider's Vision

Rider University will be a leader in American higher education celebrated for educating talented students for citizenship, life and career success in a diverse and interdependent world. Rider will achieve distinctiveness by focusing on students first, by cultivating leadership skills, by affirming teaching and learning that bridges the theoretical and the practical and by fostering a culture of academic excellence.

Rider's Mission

Rider attracts and graduates talented and motivated students with diverse backgrounds from across the nation and around the world and puts them at the center of our learning and living community.

As a learner-centered University dedicated to the education of the whole student, Rider provides students the intellectual resources and breadth of student life opportunities of a comprehensive university with the personal attention and close student-faculty interactions of a liberal arts college.

Through a commitment to high quality teaching, scholarship and experiential opportunities, faculty on both campuses provide undergraduate and graduate students rigorous and relevant programs of study to expand their intellectual, cultural and personal horizons and develop their leadership skills. Our highly regarded programs in the arts, social sciences, sciences, music, business and education challenge students to become active learners who can acquire, interpret, communicate and apply knowledge within and across disciplines to foster the integrative thinking required in a complex and rapidly changing world.

Rider attracts highly qualified faculty, staff and administrators with diverse backgrounds who create an environment which inspires intellectual and social engagement, stimulates innovation and service and encourages personal and professional development. As key members of our University community, it is their commitment to our values, vision and mission that will ensure Rider's success.

The University's institutional identity will continue to reflect the strengths of its people, history, location and shared values, among which are a commitment to diversity, social and ethical responsibility and community.

The success of our graduates will be demonstrated by their personal and career achievements and by their contributions to the cultural, social and economic life of their communities, the nation and the world.

Accreditations

Rider University is regionally accredited by the Middle States Commission on Higher Education.

The University also holds many specialized accreditations that attest to the quality of its academic programs. Rider is among the select business schools to have attained AACSB International (Association to Advance Collegiate Schools of Business) accreditation. Elementary and secondary education programs and their applicable graduate programs on both campuses are accredited by the National Council for the Accreditation of Teacher Education (NCATE). The undergraduate and graduate music programs of Westminster Choir College are accredited by the National Association of Schools of Music (NASM). In addition,

Rider's graduate counseling services program in the School of Education holds the Council for Accreditation of Counseling and Related Education Programs (CACREP) national accreditation, and its school psychology program holds the National Association of School Psychologists (NASP) accreditation. Rider's chemistry program is accredited by the American Chemical Society.

Rider University is a member of the National Collegiate Athletic Association (NCAA) Division I for both men's and women's athletics. The University offers 20 sports—10 men's and 10 women's teams. Rider is a member of the Metro Atlantic Athletic Conference (MAAC), Eastern Wrestling League (EWL) and the Eastern College Athletic Conference (ECAC).

Notice of the Title IX Coordinator

As a community of educators and learners, Rider University is committed to fostering an environment dedicated to learning and mutual respect as reflected in the University's mission, Statement of Community Values, Anti-Harassment and Non-Discrimination Policy and Title IX. All students, faculty, administrators and staff at the University have the right to expect an environment that allows them to enjoy the full benefits of their work or learning experience. The University, therefore, does not condone violations of its Anti-Harassment and Non-Discrimination Policy and treats all allegations about violations very seriously. As outlined in the Anti-Harassment and Non-Discrimination Policy (www.rider.edu/ahnd) (http://www.rider.edu/sites/default/files/docs/anti-harassment-non-discrimination-2015-16_v08012016.pdf), the University prohibits all forms of discrimination, harassment, sexual assault, sexual misconduct, sexual harassment, dating violence, domestic violence and stalking.

Rider University is an Equal Opportunity and Affirmative Action Employer.

No one will be denied employment at, admission to, or the opportunity to participate in educational programs and activities at the University on the basis of race, creed, color, religion, handicap/disability, gender, age, marital status, sexual orientation, gender identity, national origin, ethnicity, status as a Vietnam-era qualified disabled veteran or other protected veteran, or status as a member of any other protected class under federal or state law. The University does not discriminate on the basis of any of the aforementioned protected bases in the recruitment and admission of students, the recruitment and employment of faculty, administrators and staff, and the operation of any of its programs and activities.

The Associate Vice President for Human Resources serves as both the Affirmative Action Officer and the Title IX Coordinator for the University, and is the resource available to anyone seeking additional information or wishing to file a complaint related to Affirmative Action and discrimination on the basis of race, creed, color, religion, handicap/disability, gender, age, marital status, sexual orientation, gender identity, national origin, ethnicity, status as a Vietnam-era, qualified disabled veteran or other protected veteran, or status as a member of any other protected class under federal or state law.

The Affirmative Action Officer and the Title IX Coordinator for the University may be contacted as follows:

Robert Stoto

Associate Vice President for Human Resources/Title IX Coordinator and Affirmative Action Officer
Moore Library, Room 108
609-895-5683
rstoto@rider.edu

Rider University is an Equal Opportunity and Affirmative Action Employer. The Associate Vice President for Human Resources serves as both the Affirmative Action Officer and the Title IX Coordinator for the University, and is the resource available to anyone seeking additional information or wishing to file a complaint related to Affirmative Action and discrimination on the basis of race, creed, color, religion, handicap/disability, gender, age, marital status, sexual orientation or national origin. The Associate Vice President for Human Resources is located in Moore Library, Room 108 and can also be reached at 609-895-5683.

Degrees

At its Lawrenceville campus, Rider University offers programs leading to six undergraduate degrees: Bachelor of Arts, Bachelor of Science, Bachelor of Fine Arts, Bachelor of Arts and Education, Bachelor of Science in Education, Bachelor of Science in Business Administration, and Associate in Arts.

Undergraduate degrees in Bachelor of Music and Bachelor of Arts in Music are offered at Westminster Choir College on the Princeton campus.

Academic Calendar

Fall Semester 2016

September

Date	Activity
4 Sunday	Residences open for new students
4-6 Sunday-Tuesday	Final new student testing and scheduling New student orientation
5 Monday	Residences open for continuing students
7 Wednesday	Day, evening, and online classes begin
7 Wednesday	Alumni audit registration 5:00 pm-7:00 pm
7-13 Wednesday-Tuesday	Schedule changes
14-20 Wednesday-Tuesday	Courses may be dropped

October

Date	Activity
1 Saturday	December 2016 degree applications due
17 Monday	Course request period for spring semester begins

November

Date	Activity
23-27 Wednesday-Sunday	Thanksgiving recess
28 Monday	Classes resume

December

Date	Activity
9 Friday	Day classes end
10-11 Saturday-Sunday	Reading days
12-13 Monday-Tuesday	Final exams
14 Wednesday	Reading day

12-15 Monday-Thursday	Evening final exams
15-16 Thursday-Friday	Final exams
17-18 Saturday-Sunday	Reading days
19-20 Monday-Tuesday	Final exams

Fall 2016 Withdrawal Dates ¹

Date	Activity
Sept. 21-Oct. 25	Withdrawal, student discretion
Oct. 26-Nov. 22	Withdrawal, consent of instructor
Nov. 23-Dec. 9	Withdrawal, psychological or physiological incapacity

Spring Semester 2017

January

Date	Activity
2 Monday	Balance of spring charges due
16 Monday	Martin Luther King, Jr. Day (Closed)
19-20 Thursday-Friday	New student orientation
20 Friday	New student testing and scheduling
21 Saturday	Residences open
22 Sunday	Enrollment clearance
23 Monday	Day, evening, and online classes begin
23-27 Monday-Friday	Schedule changes
27 Friday	Deadline for makeup of fall semester incomplete grades
30-Feb. 3 Monday-Friday	Classes may be dropped

February

Date	Activity
1 Wednesday	Incoming freshman, transfer and continuing undergraduate students priority deadline for filing federal financial aid forms
15 Wednesday	Spring 2017 degree applications due

March

Date	Activity
6 Monday	Course request period for fall semester begins
11 Saturday	Last day of classes before spring recess
12-19 Sunday-Sunday	Spring recess
20 Monday	Classes resume

April

Date	Activity
27 Thursday	Evening classes end
28 Friday	Day classes end
29 Saturday	Saturday classes end

29-30 Saturday-Sunday	Reading Days
-----------------------	--------------

May

Date	Activity
1-2 Monday-Tuesday	Final exams
1-4 Monday-Thursday	Evening final exams
3 Wednesday	Reading day
4-5 Thursday-Friday	Final exams
6-7 Saturday-Sunday	Reading days
8-9 Monday-Tuesday	Final exams
12 Friday	Undergraduate Commencement

June

Date	Activity
1 Thursday	Summer 2017 degree applications due
9 Friday	Deadline for makeup of spring semester incomplete grades

Spring 2017 Withdrawal Dates ¹

Date	Activity
Feb. 6-March 10	Withdrawal, student discretion
March 13-April 14	Withdrawal, consent of instructor
April 17-28	Withdrawal, psychological or physiological incapacity

¹ Please refer to www.rider.edu/offices-services/finaid/payments-billing-deposits/refunds (<http://www.rider.edu/offices-services/finaid/payments-billing-deposits/refunds>) for information regarding course withdrawals and refunds.

For additional information and updates, go to www.rider.edu (<http://www.rider.edu>)

Summer Session 2017

Students interested in calendar and course offerings for the summer sessions should consult the summer session catalog, available from the College of Continuing Studies at 609-896-5033 or go to www.rider.edu/summer (<http://www.rider.edu/summer>).

Commencement Information

For Commencement ceremonies information, go to www.rider.edu/commencement (<http://www.rider.edu/commencement>)

Cancellation of Classes

In most cases, Rider will remain open and fully operational during snowstorms and other emergency situations. Under extreme circumstances, however, it may become necessary to cancel classes and other functions, and close certain buildings or take emergency actions.

If such circumstances should arise, a notice will be sent via the Rider Alert System.

Students may sign up for Rider Alert on Rider's homepage, www.rider.edu (<http://www.rider.edu>)

Cancellations will also be announced online at www.rider.edu (<http://www.rider.edu>) and on the Rider University information hotline at 609-219-2000, option 1.

Academic Support Services

Rider University offers a wide array of academic support services. Additional information regarding each of these can be found on Rider's Web site (<http://www.rider.edu/academics/academic-support-services>). (<http://www.rider.edu/academics/academic-support-services>)

Registrar (<http://www.rider.edu/academics/academic-support-resources/registrar>)

Responsible for academic records, registration processing, degree and attendance verification, transcripts, grade reporting, veterans services, and maintenance of the student and course information system.

Career Services (<http://www.rider.edu/careerservices>)

Provides resume assistance, interview preparation, job search/postings, networking, career fairs, graduate school preparation, alumni services, employer partnerships and more.

Student Support Services (<http://www.rider.edu/academics/academic-support-resources/student-support-services>)

A comprehensive academic support program designed to increase performance, retention and graduation rates, primarily of first-generation college students.

Student Success Center (<http://www.rider.edu/academics/academic-support-resources/student-success-center>)

Offers free tutoring and other programs to enhance learning and development.

Services for Students with Disabilities (<http://www.rider.edu/academics/academic-support-resources/services-students-disabilities>)

Ensures equal access by providing services for all students with qualifying documented disabilities.

Math Skills lab (<http://www.rider.edu/academics/academic-support-resources/math-skills-lab>)

Offers peer tutoring in individual or group settings to help students develop stronger math concepts and strategies.

Reading Courses (<http://www.rider.edu/academics/academic-support-resources/reading-courses>)

Rider University offers two levels of reading courses: Introduction to Academic Reading and College Reading.

Additional Learning Opportunities

Study Abroad

Rider University offers a variety of study abroad opportunities through the Center for International Education. For more information, see Rider's website. (<http://www.rider.edu/studyabroad>)

Summer Sessions

The College of Continuing Studies (Bart Luedeke Center, Suite 31) administers the undergraduate summer sessions. The summer sessions include courses scheduled in 3-week or 6-week sessions. Summer I begins in May and Summer II begins in late June or early July. Courses are offered during the day, evening and in an online format. Information regarding summer sessions is available at www.rider.edu/summer (<http://www.rider.edu/summer>). Student registration begins in March.

Leadership Development Program

A program of Rider's Center for the Development of Leadership Skills (CDLS), the Leadership Development Program (LDP) is a university-wide program that is open to all majors. The guiding assumption underlying this program is that every one of us has opportunities to be a leader and a role model for someone. A person does not have to be a CEO, elected official, or designated leader to make a difference.

Leadership at Rider is defined as a process in which one individual influences others to attain goals for the common good. To lead effectively requires skill in communicating, influencing, and teamwork. These are interpersonal skills that can be learned. They have been identified by Rider University, The Wall Street Journal, and the Center for Creative Leadership as the keys to career and life success.

The Leadership Development Program also emphasizes career development. Helping our students achieve career maturity will allow them to develop satisfying and meaningful occupations through which to express their leadership aspirations.

Leadership training at Rider combines traditional classroom learning with intensive skill training and supervised leadership experience through co-curricular activities, experiential learning, fieldwork, and community service. Developmental experiences are provided throughout a student's academic career.

Rider undergraduates of all majors who are interested in advancing their leadership development are invited and encouraged to apply. While first and second year students have the greatest opportunity to complete the program requirements prior to graduation from the university, students in their third year may apply, but are encouraged to speak with the Director of the LDP to assess the likelihood of successful completion. Only applicants with a 2.5 GPA or higher will be considered (first semester Freshmen are exempt from this, as they do not yet have a GPA at Rider).

Upon successful completion of the requirements listed below, students will obtain a Leadership Certificate upon graduation from Rider:

- Foundations of Leadership course (3 credit course – must earn a B or better)
- Leadership Skills Classes (3 skill-building seminars - composed of 9 total classes)
- Ethics or Multicultural Studies elective (3 credit course – must earn a B or better)
- Career Development Workshops
- Community Service Projects
- LDP Program/Workshop Attendance
- Leadership Practicum (200 supervised units of actual leadership experience in clubs, organizations, internships, fieldwork, community service, etc.)
- The maintenance of at least a 2.5 cumulative grade point average (*Applicants with a cumulative GPA of 2.5 or less will not be considered for membership into the LDP)

At graduation, students who have successfully completed the requirements listed above will receive a Certificate in Leadership. Their completion of the Leadership Development Program will also be noted on their transcripts and in the commencement program.

For more information, see Rider's website (<http://www.rider.edu/ldp>). See also Leadership Development Program (p. 66) in the Academic Catalog.

BA, BS/MBA Program

The integrated BA, BS/MBA program is designed for students who wish to combine undergraduate study in liberal arts and sciences leading to a Bachelor of Arts or Bachelor of Science degree, with graduate study leading to the degree of Master of Business Administration. This intensive program enables highly motivated students to engage in a broadly based education for a career in business or not-for-profit organizations.

The admission process for this program carefully tracks students through the course requirements and ensures that only capable students are enrolled. Freshman students are strongly encouraged, when they start classes, to seek advice about the program from the deans' offices in business administration and liberal arts and sciences. Certain courses must be completed in the freshman and sophomore years if the student intends to complete the program within 11-12 semesters. The actual timing of completing the two degrees will be based on courses that may have been taken in summer sessions and the individual student's internships.

The admission process starts prior to the beginning of the student's junior year (defined as 54 earned credit hours) and assumes completion of the first seven required business courses. At that point, the CBA's Associate Dean for Graduate Programs meets with the student and reviews his/her progress in completing the business core. Step two of the admission process occurs in the first semester of the senior year when the student will formally apply to the MBA Program through the Graduate Admissions Office. The process involves the following:

- A completed application for admission to the MBA program, accompanied by a \$50 nonrefundable application fee;
- Receipt of official transcripts from every college or university attended (including Rider University);
- A score on the Graduate Management Admissions Test (GMAT) or the Graduate Record Exam (GRE) that, combined with the student's GPA, work experience and co-curricular activities, shows evidence to the Graduate Admissions Committee of ability to do graduate work at the high level established for the MBA Program. Students are advised to take the GMAT or GRE exams in the summer between the junior and senior years;
- A statement of objectives prepared by the student that presents the student's reasons for wanting to enter the MBA program;
- An interview with the director of the MBA program; and,

- Completion of the required freshman and sophomore classes.

Students completing the BA, BS/MBA program must take at least 90 credits in liberal arts and sciences courses at the undergraduate level.

Students will be awarded the BS or BA degree when they complete the requirements for that degree in liberal arts and sciences. The MBA will be awarded upon completion of the MBA requirements.

Students in the program will complete all the courses required in the liberal arts core as well as those courses necessary to satisfy the requirements for a major in liberal arts and sciences. The following courses will be completed in the first eight semesters along with the following courses offered by business administration comprising the undergraduate business core:

ACC 210	Introduction to Accounting	3
ACC 220	Managerial Uses of Accounting	3
ECO 200	Principles of Macroeconomics ¹	3
ECO 201	Principles of Microeconomics ¹	3
FIN 220	Introduction to Finance	3
MGT 201	Fund Management & Org Behavior	3
MKT 200	Marketing Principles	3
MSD 105	Quantitative Methods for Business	3
MSD 200 & MSD 201	Statistical Methods I and Statistical Methods II ¹	6
CIS 185	Information Systems Essentials	3
CIS 385	Management Information Systems	3
Total Credits		36

¹ May be considered either business or liberal arts course.

In the last semester of the senior year, students will take the following course if they have all of the prerequisites met:

MSD 340	Production and Operations	3
---------	---------------------------	---

In all of the above courses, students must achieve a “B” or better in order for them to waive the equivalent “pre-program requirements” for their MBA Degree. If they do not, the student will be required to take the corresponding course at the graduate level.

In the three (3) or four (4) graduate semesters, the following graduate courses must be completed:

PMBA 8000	Executive Communications	1.5
PMBA 8210	Information Technology Management	3
PMBA 8220	Strategic Accounting for Manager	3
PMBA 8230	Managerial Economics ¹	3
PMBA 8240	Applied Corporate Finance	3
PMBA 8250	Operations & Supply Chain Management	3
PMBA 8260	Mkt Analysis & Decision Making	3
PMBA 8270	Adv. Organizational Behavior	3
PMBA 8290	Legal and Ethical Aspects of Management	3
PMBA 8880	Strategic Planning	3
Electives		6
Total Credits		34.5

¹ PMBA 8050 Introduction to Calculus or an equivalent calculus course must be completed before the student may take PMBA 8230.

Note: There is not a specific combination BS, BA/MBA program for business majors. All business majors may apply directly to the MBA program. If accepted, the student may be able to complete the MBA within twelve months after undergraduate graduation.

Further information concerning the MBA program is available from the Graduate Business Academic Coordinator, Mrs. Jean Cherney, at (609) 895-5557 or jcherney@rider.edu

Colleges and Schools

Originally founded in 1865 as a business college to prepare professionals for the booming post-Civil War economy, in 1959 Rider moved from Trenton to its current 280-acre campus in Lawrenceville, New Jersey. Thirty-three years later, a merger took place between Rider and Westminster Choir College in Princeton, NJ. Considered one of the leading schools of music of its kind in the world, the merger also led to the successful integration of the theatre and dance programs at Rider University and the college, in its entirety, became the Westminster College of the Arts in 2007. Housing both the School of the Fine and Performing Arts and Westminster Choir College, WCA was formed to offer select music and theatre programs on both the Princeton and Lawrenceville campuses, providing a complement to the liberal arts, sciences, education and business programs.

The colleges and schools within Rider University include:

- College of Business Administration (p. 10)
- College of Continuing Studies (p. 95)
- College of Liberal Arts and Sciences (p. 166)
- School of Education (p. 461)
- Westminster College of the Arts (p. 560)

College of Business Administration

Business administration is for anyone who wants to develop the skills needed to turn ideas and dreams into reality. Whether it's creating a own company or rising to the top of a major corporation, the key is having the skills to make it happen.

In each of its majors, the College of Business Administration (CBA) seeks to develop in students the skills needed to perform effectively in a variety of organizational settings—small business, multinational corporation, service industry, not-for-profit, family company, Wall Street—depending upon the student's interests and goals. Each program is designed to provide an educational experience for the whole person by combining theory and practice. Business students participate in a learning environment that offers both the practical skills needed to launch a career and the learning skills needed for continued growth.

Mission Statement

The mission of Rider University's College of Business Administration is to provide a dynamic and innovative business education that builds functional expertise as well as professional competencies that enable our students to be productive, ethical, and socially responsible participants in the rapidly changing global marketplace.

The college fosters a supportive and personalized environment in which students develop communication, interpersonal, teamwork, leadership, and critical thinking skills for integrated problem solving.

The CBA infuses current theory and practice into the curricula through professional activity, business partnering, and experiential learning as well as through a combination of discipline-based, pedagogical, and applied scholarly research efforts.

Key Objectives

To support students in preparing to perform effectively in the workplace and to continue to grow as individuals, the CBA seeks to realize the following key objectives for its undergraduate programs:

- To provide an outstanding faculty of teacher/scholars in the business fields who bring to the classroom a wide range of diverse expertise and who emphasize teaching excellence as well as research and scholarship;
- To develop an understanding of the functions of business, an ability to apply the tools and skills that will solve business and organizational problems, and an appreciation for the global environment of organizations in society;
- To offer sufficient breadth and depth in the curriculum to enable the student to achieve a level of competence in a major, while also providing opportunities for independent study, skill-building, and learning through experience;
- To ensure a useful balance between professional course work in the functional areas of business administration and study in the liberal arts and sciences; and
- To foster the development of leadership qualities and to encourage an attitude that values continuing education.

To remain strongly competitive, the CBA maintains high visibility and involvement in the corporate community outside of Rider. It seeks to be regarded by that community as a useful and valuable resource of educational knowledge, business and management talent, economic expertise and applied research, as well as an excellent source of college graduates in business. Students and faculty are involved regularly in real business situations through internships, meetings, and programs of the Executive Advisory Council, the CBA Accounting Advisory Council, the CBA Global Supply Chain Management Advisory Board, the CBA Human Resource Management Board, the CBA Entrepreneurship Board, the CBA Business Analytics Advisory Board, and the CBA Marketing and Advertising Board. Students benefit from special programs for the community such as the Volunteer Income Tax Assistance (VITA) program coordinated by the Department of Accounting, Minding Our Business (a mentoring program of entrepreneurship for inner city students), and many student clubs and organizations.

Regardless of the functional area of business that students select for their careers, they will be impacted by what occurs in the world of technology-enhanced business practices. Rider's courses will continue to adapt and change as this fast-paced environment continually reinvents itself.

Professional Accreditation

Rider University's College of Business Administration programs were accredited by AACSB International—The Association to Advance Collegiate Schools of Business — in 1993 and most recently reaffirmed in 2012. In addition, the accounting program was further recognized for excellence with accreditation in accounting by AACSB International in 2000 and recently reaffirmed in 2012.

BSBA/MBA Option

It is possible to apply to the graduate business program after completing 90 credits in a Rider undergraduate business degree program. Those students admitted may enter the program upon the completion of the BSBA degree. Courses waived should permit them to graduate with an advanced degree in one year by taking the required graduate course work. See the Graduate Academic Catalog (p. 752) for requirements for the MBA program and the Master of Accountancy degree.

Students are eligible to take graduate business courses in the spring of their senior year if they are senior business majors with a minimum cumulative GPA's of 3.5 for MBA courses and 3.3 for MAcc courses. In order to take a MAcc course, a student must be an accounting major. Graduate business courses do not count toward both the undergraduate and graduate program requirements. Up to six credits of graduate level courses may be taken, and would be included in the regular full-time tuition fee.

Degrees

The CBA offers curricula at the undergraduate level leading to the degree of Bachelor of Science in Business Administration (BSBA).

(For master's level work, see the Graduate Academic Catalog (p. 751).)

Fields of Study: Majors, Minors, Concentrations and Certificates

To see the variety of programs of study that the CBA has to offer, please visit the list of Majors, Minors and Certificates (p. 11) available.

Selection of a Major

Students who are undecided regarding an area of business specialization are enrolled as business administration majors.

A student may elect to double major, but there is no guarantee that the student will be able to complete the second major within the 120 credit hours required for graduation.

Independent Study and Research

Students are offered opportunities for independent study in business-related areas for which formal courses are not available. Each program in the CBA provides these opportunities during the regular semester via offerings labeled 490, Independent Research and Study. Projects may be taken by an individual or a group of students working together. Each person must submit an independent study proposal including definitive statements on the following: an elaborate, clear statement of the study's significance; the study's design and objective; the utilization and expectation of on- and off-campus resources related to the study; and method to be used to demonstrate the results of the study.

Independent study proposal requests can be obtained and approved by the appropriate chairperson and the CBA Dean's Office. Such proposals must be submitted prior to the semester of the independent study and must include a timeline for completion.

Accounting

Program Overview

Rider's accounting programs are designed to build professionals. The BSBA in accounting provides students with the skills and knowledge needed for careers with corporations, public accounting firms and governmental organizations.

Accounting majors learn in the classroom, during co-op and internship positions and through ongoing networking opportunities with accounting executives.

Curriculum Overview

The BSBA accounting curriculum prepares students for a variety of career paths in the dynamic field of accounting. The curriculum emphasizes

technical knowledge, professional development, written and oral communication, information technology, ethics and global perspectives.

The BSBA program has an active co-op and internship program in which students work in paid positions during the semester or summer and earn academic credit for the program. Both the co-op and internship can be completed within the four year program and often lead to full-time employment. The BSBA also offers a business forensic concentration.

Students who want to pursue **CPA certification** can meet the 150 hour requirement for CPA licensure by double majoring in the BSBA program or by continuing in the **4+1 Master of Accountancy (MAcc) program**.

Undergraduate accounting majors are encouraged to work closely with their advisor to select courses which will best address their career and certification plans. Students should consult the specific certification requirements of the state jurisdiction in which they plan to become certified and plan accordingly. To learn more about individual state requirements for CPA licensure see www.nasba.org. (<https://nasba.org/exams/cpaexam>)

Master of Accountancy (4 + 1 MAcc Program)

The 4 +1 MAcc program is the fastest growing program in the College of Business Administration. The MAcc prepares students for CPA licensure and allows for an area of specialization. Students may enter the program directly from the BSBA program, and for students with overall and accounting GPA of 3.0, the GMAT requirement for admission is waived. The MAcc can be completed on either a full-time or part-time basis.

Accreditation Information

The accounting program is one of less than 4% of accounting programs worldwide to hold the prestigious AACSB business and accounting accreditation. The accounting faculty are committed to continuous improvement in curriculum, faculty and student preparation.

Degrees Offered

- B.S.B.A. in Accounting
- Master of Accountancy (fifth year program, 4+1)

Accounting Major Requirements

(24 credits)

Business Core

See Business Core Requirements (p. 89)

Major Requirements

ACC 302	Cost Management	3
ACC 310 & ACC 311	Acct Theory & Concepts I and Acct Theory & Concepts II	6
ACC 320	Accounting Info Systems	3
ACC 400	Principles of Auditing	3
ACC 405	Acct Problems & Practice	3
ACC 406	Integrative Professional Capstone	3
ACC 410	Fund of Federal Taxation	3
Total Credits		24

Students who are accepted into the MAcc program after 90 credit hours may substitute a required graduate accounting course for ACC 406. Students who do not take ACC 406 must take an additional free elective in order to meet the 120 required credits at the baccalaureate level. Students who plan to take the CPA track in the MAcc must take MACC 658 Governmental and Not-for-Profit Accounting in place of ACC 406; for these students, MACC 658 may also be used to fulfill the 120 undergraduate credit requirement.

Students desiring to become certified public accountants (CPAs) will be required to have 120 credit hours of education to take the CPA exam and have completed 150 credit hours of education for licensure. Rider accounting majors may graduate after four years (120 credit hours) or seek to achieve the additional credit hours directly through admission to the Master of Accountancy (MAcc) program at the University. It is possible to apply to the MAcc program at Rider after completion of 90 credit hours. (Please consult the Rider University Graduate Academic Catalog for details on the MAcc program.) Undergraduate accounting majors are encouraged to work closely with their advisor to select courses that will best address their career and certification plans. Students should consult the specific certification requirements of the state jurisdiction in which they plan to become certified and plan accordingly.

Students majoring in accounting must receive a grade of at least "C-" in a prerequisite course for any advanced course in accounting, and must have a cumulative average of at least 2.0 in the major.

Academic Plan for Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Course	Title	Semester Credit Hours
Year 1		
Fall Semester		
ACC 210	Introduction to Accounting	3

¹ Transfer students may be required to take MGT 336 Career Management as a substitute.

² Choose from LDP 398 The Co-op Experience Seminar, LDP 200 Foundations of Leadership, LDP 220 Service Learning Through Minding Our Bus, MGT 355 Team Management, or MGT 363 Management Skills. Students taking ACC 399 The Co-Operative Experience are required to take LDP 398 The Co-op Experience Seminar during the co-op semester.

NOTES

1 – **Business Fraud and Forensic Concentration:** Students should take ACC 325 Fraud Examination and Business Forensics in the spring of sophomore year, ACC 321 Internal Auditing in the fall of junior year, and ACC 450 Business Forensic Application in the spring of senior year.

2 – **CPA Licensure Requirements for Students Not Entering the MAcc**
To meet licensing requirements, as part of the BSBA program, students should take the following electives: BUS 210, Business Law and FIN 308 International Finance. Students should also work with their academic advisor to plan the additional 30 credits.

3 – Students should take FIN 308 International Finance as one of the two required international business electives.

4 – Global/Cultural Liberal Arts Elective can be satisfied by courses that are designed as global/cultural, including language courses at the 101 level or above.

5 – Students are strongly suggested to complete a credit-bearing experiential course (e.g., Internship, Co-op, Study Tour, study abroad, ENT 448 Seminar in Small Business Consulting, ECO 450 Seminar in Economic Research.)

6 – Students working co-op positions in the spring of their third year will substitute ACC 399 (6 credits of free electives) for CIS 385 and MSD 340. CIS 385 and MSD 340 must be taken in another semester.

7 – Students entering the MAcc are waived from ACC 406 but must substitute with another business elective.

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different

plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

¹ Students who wish to complete the Concentration in Fraud and Business Forensics (p. 42) must take ACC 325 Fraud Examination and Business Forensics, ACC 321 Internal Auditing, and ACC 450 Business Forensic Application.

- NOTES
- Assumes no AP or other credits transferred into Rider University.
- Students are required to take 6 credits of International Business Electives. The Accounting Department recommends FIN 308 International Finance as one of the two International Business Electives.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts electives can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 200 Foundations of Leadership, LDP 220 Service Learning Through Minding Our Bus, LDP 398 The Co-op Experience Seminar, MGT 355 Team Management, or MGT 363 Management Skills.
- it is strongly suggested that students complete a credit-bearing experiential course (e.g., internship, co-op, study tour, study abroad, ENT 448 Small Business Consulting Sem, ECO 450 Seminar in Economic Research).
- Students who plan to complete the CPA 150-hour requirement in 4 years should take BUS 210 Intro to Law: Contracts as a free elective and FIN 308 International Finance as one of the required International Business Electives.

Courses and Descriptions

ACC 210 Introduction to Accounting 3 Credits

This course provides an introduction to basic principles and methods of accounting essential to preparation, understanding and interpretation of financial statements. Topics include accounting for merchandising concerns, current assets, long-term assets, liabilities and equity accounts. A brief overview of internal control is also covered.

ACC 220 Managerial Uses of Accounting 3 Credits

This course provides an introduction to the use of accounting information in managerial decision-making. Topics include cost behavior, cost classifications, and problem-solving functions of accounting as they pertain to planning, control, evaluation of performance, special decisions, and budgeting. The interpretation of published financial statements and the statement of cash flow are also covered.

Prerequisite(s): ACC 210.

ACC 302 Cost Management 3 Credits

This course focuses on firm strategy and the role managerial accounting information plays in the decision making process. Topics include the balanced scorecard, the value chain, product life cycles, target costing, theory of constraints, strategic pricing, management and control of quality cost systems, traditional and activity-based costing, cost control, standard costs and variances, and capital budgeting.

Prerequisite(s): ACC 220 and CIS 185.

ACC 310 Acct Theory & Concepts I 3 Credits

This is the first upper-level course in a sequence in financial accounting courses. Topics include the conceptual framework, and standard setting process followed by application and evaluation of generally accepted accounting principles including content, and structure of financial statements, present value concepts, current assets, current liabilities, property, plant, and equipment, intangible assets and non-current liabilities are studied. An overview of comparable international financial reporting standards (IFRS) is also included.

Prerequisite(s): ACC 210 and ACC 220.

ACC 311 Acct Theory & Concepts II 3 Credits

This course is a continuation of ACC 310. Topics include long-term investments, stockholders' equity, earnings per share, interperiod income tax allocation, accounting changes, revenue recognition, pensions, leases and cash flow analysis. An overview of comparable international financial reporting standards (IFRS) is also included.

Prerequisite(s): ACC 310.

ACC 320 Accounting Info Systems 3 Credits

This course provides an introduction to accounting information systems and enterprise-wide, process-focused information systems. Topics include quality of data for decision usefulness, internal control concepts and documentation tools, and database theory and applications.

Prerequisite(s): ACC 310.

ACC 321 Internal Auditing 3 Credits

This course provides an introduction to the internal audit profession, including understanding the nature and activities associated with the internal audit process. Topics include: international auditing standards, risk assessment including internal control system evaluation, business processes, and the relationship of management and employee fraud to the internal audit process.

Prerequisite(s): ACC 220.

ACC 325 Fraud Examination and Business Forensics 3 Credits

This course is designed to introduce students to the prevalence of fraud and fraudulent financial reporting in all forms of business, including the many methods used by employees and managers to perpetrate fraud. Topics will include: the motivation of individuals to commit fraud, various types of fraud schemes perpetrated in the workplace, as well as the various tools and techniques that are used to investigate, detect and prevent fraud.

Prerequisite(s): ACC 210.

ACC 335 Small Business Taxation 3 Credits

This course provides an understanding of the key tax issues faced by small businesses and their business implications. It also familiarizes prospective business owners with various tax filing requirements so that they can use the expertise of tax professionals more effectively.

Prerequisite(s): ACC 210.

ACC 399 The Co-Operative Experience 6 Credits

This course provides the student with a semester long supervised employment with participating companies. Students are evaluated periodically by senior staff members of the participating firms and required to complete a work journal, self-assessment and reflection paper. Eligible students include junior and senior accounting majors with a minimum GPA of 3.0 in accounting coursework. Co-op credits can be applied toward business or free elective requirements. Grading is on a pass/fail basis.

Prerequisite(s): ACC 210, ACC 220, and ACC 310 and permission of department chairperson.

ACC 400 Principles of Auditing 3 Credits

This course provides an introduction to financial statement audits performed by certified public accountants. Topics include corporate governance, the audit environment, professional standards, audit methodology, and audit report preparation. The course also provides an overview of other types of assurance and non-assurance services provided by CPA firms.

Prerequisite(s): ACC 302 and ACC 311.

ACC 405 Acct Problems & Practice 3 Credits

This course provides additional coverage of financial reporting issues and procedures. Topics include business combinations, consolidated financial statements, foreign currency translation, the effects of diversity across countries, disclosure and SEC reporting issues. Governmental and not-for-profit accounting standards are also covered.

Prerequisite(s): ACC 302 and ACC 311.

ACC 406 Integrative Professional Capstone 3 Credits

This course provides an integrative experience that applies financial statement and data analysis tools to a variety of accounting settings. Topics include issues of ethics and professionalism and linkages between accounting methods and company policy, equity valuation, bond ratings and other decision areas.

Prerequisite(s): ACC 405 or permission of department chairperson.

ACC 410 Fund of Federal Taxation 3 Credits

This course provides fundamental federal tax concepts applicable to individuals, partnerships, corporations, estates, and gifts. Topics are considered from a tax compliance and planning perspective. Preparation of individual and corporate tax returns is also included.

Prerequisite(s): ACC 311.

ACC 450 Business Forensic Application 3 Credits

This course is designed so that students to integrate various business disciplines to perform complex investigative cases and analyses, thus demonstrating mastery of the knowledge and skills required to be effective forensic professionals. The course covers how to manage and present digital and technical evidence gathered for forensic litigation cases, including the ability to be an expert witness in court.

Prerequisite(s): ACC 325 and ACC 321.

ACC 490 Independent Research and Study 3-4 Credits

Topic to be approved by professor and department chairperson. Available to juniors and seniors.

ACC 491 Accounting Internship 3 Credits

This honors course provides the student with approximately two months of supervised employment with participating companies. Students are evaluated periodically by senior staff members of the participating firms and are required to complete a term paper. Eligible students include junior and senior accounting majors with a minimum GPA of 3.0 in accounting coursework. Upon completion of course, a letter grade will be awarded.

Prerequisite(s): Permission of department chairperson.

Advertising

Program Overview

A degree in advertising gives students the opportunity to develop and enhance their management, creativity, and communication skills to become competitive in today's global marketplace. Graduates from the advertising program enter the workforce with a critical understanding of consumer behavior, creative strategy, and marketing communications management.

Curriculum Overview

An advertising major prepares students for careers in advertising agencies, large or small, or in the advertising or promotion departments of profit or nonprofit organizations. Possible entry-level positions include media buyer, copy writer, and assistant account executive. This program combines a solid background in the business disciplines with the study of marketing communications. It emphasizes the role of advertising and promotions within the marketing communications strategy.

Degree Offered

- B.S.B.A. in Advertising

Note: a minor in web design (p. 444) is required.

- Assumes no AP or other credits transferred into Rider University.
- Students are required to take 6 credits of International Business Electives which can be fulfilled as major courses or as free elective courses.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as Global/Cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 398 Co-op Experience Seminar, LDP 200 Foundations of Leadership, LDP 220 Service Learning Through MOB, MGT 355 Team Management, or MGT 363 Management Skills.
- Assumes student takes MGT 336 Career Management as a substitute for CBA 102, CBA 202 CBA 302.

Courses and Descriptions

ADV 311 Advertising Copy and Layout 3 Credits

This course focuses on the development and planning of creative and strategic advertisements for a variety of products. The course includes creating concepts for ads, designing ads, and writing copy for all media. The student will become familiar with the activities and responsibilities of copywriters and art directors. The relationship between creative advertising and other functions of advertising will be emphasized. **Prerequisite(s):** either ADV 200 or MKT 205 and COM 212. Required for advertising majors.

ADV 315 Media Planning and Strategy 3 Credits

This course focuses on the essential principles, measurements, procedures and problems encountered in determining appropriate media in which to place specific kinds of advertising messages designed to reach closely defined target audiences. The advantages and disadvantages of all media will be discussed from an advertising perspective. Specific audience and cost calculations and analyses will be used to develop comprehensive media plans.

Prerequisite(s): either ADV 200 or MKT 205. Required for advertising majors.

ADV 435 Advertising Campaigns 3 Credits

This capstone course for advertising majors provides an opportunity for students to plan comprehensive advertising campaigns. Coverage includes segmentation research, creative development of the campaign, media planning, and determining advertising effectiveness. Integration of advertising into the marketing program will be emphasized. Required for advertising majors.

Prerequisite(s): ADV 311, ADV 315; advertising major or minor, senior standing or permission of instructor.

ADV 490 Independent Research and Study 1-4 Credits

Topic to be approved by the professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation, which may be counted as a business or free elective.

ADV 491 Internship-Based Indep Study 3 Credits

Provides the student an opportunity to supplement and apply classroom work in supervised employment with participating marketing and advertising firms. Requirements include a journal with a log of daily activities, and a project or term paper presented to and evaluated by the internship sponsor. Evaluation will also include a report by the company on the intern's performance. Credits may be used to satisfy business or free elective requirements.

Prerequisite(s): Permission of instructor.

Advertising for English Majors

Overview

This minor will help students study and practice the strategic and creative aspects of integrated marketing communications, including advertising.

ENG 304	Creative Writing: Fiction	
ENG 305	Creative Writing: Nonfiction	
ENG 311	Creative Writing: Playwriting	
ENG 312	Creative Writing: Screen Writing	
ENG 322	Workplace Writing: Grant Proposals, Fundraising and Development	
Total Credits		27

Students must achieve a minimum GPA of 2.0 in the minor, with no course grade less than "C-."

Courses and Descriptions

CIS 260 Business Graphics 3 Credits

Basic color theory, typography, and page/slide layout are presented. Students utilize presentation, word processing and photo editing applications to create and edit various documents through hands-on labs and projects.

Prerequisite(s): CIS 185 or permission of instructor.

COM 212 Publication Design 3 Credits

Explains theories, principles, and techniques of print media layout and design. Provides an understanding of the use of type and art as design elements in various publication formats, such as newspapers, newsletters, advertisements and brochures. Directs students to apply these concepts to the creation of published materials using Adobe Creative Suite.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MKT 205 Advertising Principles 3 Credits

Basic theory, functions, principles, and applications of advertising are the focus of this course. The relation of advertising to our economy, the advertising department and the ad agency, selection of media, advertising practices, and the use of research to improve advertising techniques are covered.

Prerequisite: MKT 200. Required for advertising majors.

MKT 320 Consumer Behavior 3 Credits

The nature and determinants of consumer behavior are studied, with attention given to the influence of socio-psychological factors such as personality, small groups, demographic variables, social class, and culture on the formation of consumer attitudes, consumption patterns, and purchasing behavior.

Prerequisite(s): MKT 200; Required for advertising majors.

ADV 311 Advertising Copy and Layout 3 Credits

This course focuses on the development and planning of creative and strategic advertisements for a variety of products. The course includes creating concepts for ads, designing ads, and writing copy for all media. The student will become familiar with the activities and responsibilities of copywriters and art directors. The relationship between creative advertising and other functions of advertising will be emphasized.

Prerequisite(s): either ADV 200 or MKT 205 and COM 212. Required for advertising majors.

MKT 375 Digital Advertising and Social Media 3 Credits

This course surveys the concepts, principles, practices and industry standards of digital advertising, including standard display and rich media advertising, search advertising, email advertising, game advertising, and mobile advertising. It also introduces the strategies and tactics in social media marketing. The course emphasizes a strategic, holistic view of digital advertising and social media as marketing communication tools that are situated in the marketing strategic framework and employed to engage consumers in community building.

Prerequisite(s): MKT 200.

ADV 435 Advertising Campaigns 3 Credits

This capstone course for advertising majors provides an opportunity for students to plan comprehensive advertising campaigns. Coverage includes segmentation research, creative development of the campaign, media planning, and determining advertising effectiveness. Integration of advertising into the marketing program will be emphasized. Required for advertising majors.

Prerequisite(s): ADV 311, ADV 315; advertising major or minor, senior standing or permission of instructor.

ENG 304 Creative Writing: Fiction 3 Credits

Students write original fiction and analyze the techniques of writing fiction in discussion of both their own drafts and published examples of the form.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 305 Creative Writing: Nonfiction 3 Credits

A workshop in Creative Nonfiction (aka Literary Nonfiction or Narrative Nonfiction, abbreviated CNF) in which students will write and read different forms of memoir and essay, including Personal Essay, Lyric Essay, Travel Writing, Oral History, and Personal Profiles. Creative Nonfiction (CNF) tells true stories using the literary techniques of fiction-writing, such as building dramatic scenes, establishing suspense, and developing a narrative sequence of events, or plot. CNF employs vivid sensory detail and builds characters and scenes to enhance the reader's experience of the story. Challenging the traditional journalist's stance of objectivity and emotional distance from her topics, CNF writers often put themselves into their stories to create a voice of reflection. We'll talk about what types of creative license CNF gives writers, and also about the ethics of storytelling, especially when your story's characters are real, living people.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 311 Creative Writing: Playwriting 3 Credits

A workshop teaching and analyzing how students write for the stage that pays particular attention to the demands of the genre. Through reading and writing assignments, students will discuss and analyze the development of their own dramatic scripts for theatrical performance. A portfolio of revisions will serve as a final for the course.

ENG 312 Creative Writing: Screen Writing 3 Credits

A workshop teaching and analyzing how students write for the screen, both television and film, that pays particular attention to the demands of the genre. Through reading and writing assignments, students will discuss and analyze the development of their own dramatic scripts for production. A portfolio of revisions will serve as a final for the course.

ENG 321 Workplace Writing 3 Credits

A workshop in writing effectively to achieve specific practical purposes in various business and professional workplace environments.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 322 Workplace Writing: Grant Proposals, Fundraising and Development 3 Credits

Students employ their analytical and writing skills to research and write grants for non-profit organizations in their local or regional communities. Fundraising and development activities on behalf of area organizations introduce them to career opportunities in this growing field.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 324 Workplace Writing: Online Contexts 3 Credits

This course will help students adapt their writing to online environments. A writing-intensive course, grounded in rhetorical principles, it focuses upon planning, writing and producing online texts distributed entirely through virtual portals. Students will write documents intended for a variety of virtual purposes, including E-mail, instant messages, text messages, blogs, wikis, workplace social-media, and online team collaborations.

Prerequisite(s): completion of composition requirements or permission of instructor.

Business Administration (B.S.B.A.)

Program Overview

Rider's business administration major provides students with a general business focus, and is ideal for students who do not want to concentrate

in a particular functional area, but instead intend to pursue one of the following goals: attend graduate school, such as law school or a MBA or Ph.D. program, enter a management training or marketing program with a future employer and/or enter a family business or start a new one.

Curriculum Overview

The Business Administration major requires completion of 18 credit hours of upper-level business courses across a variety of disciplines, including: economics, finance, management and marketing and more.

For graduation students must achieve an overall GPA of 2.0 in the major. Business Administration majors may not count more than six credit hours toward a second major, with the exception of International Business. Students majoring in Business Administration can count up to nine credit hours toward the International Business major.

Degree Offered

- B.S.B.A. in Business Administration

 - Students are required to take 6 credits of International Business Electives which can be fulfilled as major courses or as free elective courses.
 - Business Honors students will have a different sequence.
 - Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as Global/Cultural, including language courses at the 101-level or above.
 - For the Leadership Elective, choose from LDP-398 Co-op Experience Seminar, LDP-200 Foundations of Leadership, LDP-220 Service Learning Through MOB, MGT-355 Team Management, or MGT 363 Management Skills.
 - Students are strongly suggested to complete a credit-bearing experiential course (e.g., Internship, Co-op, Study Tour, study abroad, ENT-448 Seminar in Small Business Consulting, ECO-450 Seminar in Economic Research.)

ACC 210 Introduction to Accounting 3 Credits

This course provides an introduction to basic principles and methods of accounting essential to preparation, understanding and interpretation of financial statements. Topics include accounting for merchandising concerns, current assets, long-term assets, liabilities and equity accounts. A brief overview of internal control is also covered.

ACC 220 Managerial Uses of Accounting 3 Credits

This course provides an introduction to the use of accounting information in managerial decision-making. Topics include cost behavior, cost classifications, and problem-solving functions of accounting as they pertain to planning, control, evaluation of performance, special decisions, and budgeting. The interpretation of published financial statements and the statement of cash flow are also covered.

Prerequisite(s): ACC 210.

BUS 300 Social & Legal Environment Bus 3 Credits

The strategies by which organizations in the private as well as the public sectors interact with, adapt to, and attempt to influence their external environments are explored. The primary emphasis is on evaluating the effect of business and governmental decisions on the quality of life. The role of regulatory agencies and the impact of local and national legislation on organizational behavior are considered.

Prerequisite(s): 54 credits.

CBA 102 Career Plan & Perspective I 1 Credits

In this course students will explore their own history, goals and values as input to their definition of success. The course will set the stage for the remainder of students' college career, and will encourage them to draw connections among their career goals, educational performance, extra-curricular experiences, and available resources.

CBA 202 Career Plan & Perspective II 1 Credits

In this course, students will build on their CBA 102 self assessments to identify specific occupations that match who they are and where they want to go. The course will provide students with the understanding of the changed nature of the current work and career environment they will be entering when they graduate from Rider. They will acquire career management skills and apply these skills to develop short and long term career goals and plans for achieving them while at Rider. The course will also touch on the intersection of work and family roles.

Prerequisite(s): CBA 102.

CBA 302 Career Plan & Perspective III 1 Credits

This one credit course will be targeted to second semester sophomores and juniors. In this course, students will build on their CBA 102 and 202 self assessments to develop strategies for a successful job search. The course will provide students with an understanding of the changed nature of the current work and career environment they will be entering when they graduate from Rider. They will acquire career management and job search skills and apply these skills to developing, networks, identify job search resources and enhance resume and interview skills. Students will understand how to research potential employers and translate their experiences into a successful job search strategy.

Prerequisite(s): CBA 102 and CBA 202.

CIS 185 Information Systems Essentials 3 Credits

This course will enable students to use Microsoft Excel and Access to design and create complex applications to support effective decision making. Students will use Excel to design and create spreadsheets to support business analytics. Access will be used to understand, design, create, and utilize relational databases.

CIS 385 Management Information Systems 3 Credits

The course focuses on the management and use of information systems and technology for the strategic and operational advantage of the firm. Students explore the business value of information resources including current communication, database, as well as hardware and software technologies. GSC 385 can fulfill the CIS 385 requirement for all business majors. Please note: Students will not receive credit for both GSC 385 and CIS 385 without prior approval by the Dean's office.

Prerequisite(s): CIS 185 and junior or senior standing.

CMP 120 Expository Writing 3 Credits

Students will increase their competence in the critical reading of challenging college-level texts that engage significant ideas and in writing effective essays that advance a clear and meaningful thesis while demonstrating understanding of those texts. The second of the department's three-course composition sequence,

Prerequisite(s): Successfully completed CMP 115 or have attained a 530 or above on the writing section and 500 or above on the critical reading section of the SAT or a score of 4 or above on the English department placement test.

CMP 125 Research Writing 3 Credits

Introduces students to the process of library research and documented writing. Emphasis will be on the refinement of critical reading, thinking, and writing strategies applied to multiple sources and documented papers.

Prerequisite(s): CMP 120 or BHP 100.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

ECO 200 Principles of Macroeconomics 3 Credits

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 201 Principles of Microeconomics 3 Credits

Market price systems are analyzed. The nature and characteristics of consumer and producer behavior, the theory of pricing in competitive and noncompetitive markets, and determination of the distribution of output are re evaluated. Welfare, social control, monopoly, and income inequality are explored in the light of price theory. The role of the United States in the world economy is explored.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MSD 105 Quantitative Methods for Business 3 Credits

The aim of this introductory course is to acquaint students with a number of basic mathematical techniques that will enhance their ability to become effective decision-makers in a realistic business environment. Topics covered include linear equations and inequalities, linear programming, summation notation, geometric series, counting techniques, event probability and discrete random variables. Where appropriate, these tools will be illustrated with examples chosen from business settings.

Prerequisite(s): MSD 104 or a passing grade on the Math Placement Exam.

MSD 340 Production and Operations 3 Credits

This course introduces the concepts and techniques of designing and managing manufacturing and service systems and their operations effectively and efficiently. Major topics include product and process design, facility location, forecasting, aggregate planning, inventory management, supply chain management, project management, just-in-time systems, quality assurance, linear programming, and the transportation problem. Current issues such as productivity, global competitiveness, and quality are also discussed.

Prerequisite(s): MSD 105 or MSD 110, MSD 200 or MTH 340, MSD 201 or MTH 341.

Business Analytics Minor

Program Overview

The Business Analytics Minor helps students develop the skills and gain the knowledge of the technologies, applications, and processes used by organizations to turn massive, diverse, and complex data into actionable insights to drive their decision making across all aspects of business, including finance, marketing, accounting, and operations. The minor utilizes a problem solving approach that combines the management of data with training in data mining, predictive analytics, and data visualization. Students will graduate with hands-on expertise using current software applications that will enable them to contribute to their organizations immediately upon graduation.

Learning Objectives

The Business Analytics Minor will focus on preparing students in the following ways:

- Students will gain an understanding of data management tools and the practical design and use of databases in a business environment
- Students will develop the abilities to use data mining techniques to derive useful business insights
- Students will be able to author enterprise dashboards to report trends and support "what-if" analysis in real time
- Students will gain proficiency in applying current analytics technology to explore, analyze, and visualize data
- Students will strengthen presentation skills to effectively communicate business-relevant implications of data analysis
- Students will display the abilities to apply data analytics skills in one or more functional areas of business

Minor Offered

- Minor in Business Analytics. The minor is currently only available to business students.

(15 credits not including prerequisites)

Prerequisite Courses

CIS 185	Information Systems Essentials
MSD 200	Statistical Methods I
MSD 201	Statistical Methods II

Required Courses

CIS 330	Database Management	9
CIS 350	Practical Business Analytics with Excel	
CIS 360	Data Mining	
Select two from the following menu		6
ACC 320	Accounting Info Systems	
ECO 450	Seminar in Economic Research	
FIN 315	Financial Modeling	
HTH 215	Population Healthcare Management	
MKT 366	Marketing Research	
MSD 320	Quantitative Methods for Business Forecasting	
MSD 325	Regression/Analysis Variance	
Total Credits		15

- ¹ The minor is currently only available to business students.
- ² Business students pursuing the Business Analytics Minor are advised to take GSC 385 Management Information Systems for Global Supply Chain Management in lieu of CIS 385 Management Information Systems for their business major requirement.
- ³ Only two CIS courses can count towards both the Information Systems Major and the Business Analytics Minor.

CIS 330 Database Management 3 Credits

This course involves the study of computer databases. Major topics include relational databases, use of the structured query language (SQL) to query relational databases, and design and maintenance of relational databases.

Prerequisite(s): CIS 185.

CIS 350 Practical Business Analytics with Excel 3 Credits

CIS 350 – Practical Business Analytics with Excel is a required course for the proposed Business Analytics minor. This course will provide the student with an opportunity to gain proficiency in analyzing and visualizing data using Excel. The learning experience includes not only classic tools, such as pivot tables and VLOOKUP, but also more advanced Excel data tools such as building Excel data models, creating data mash ups, and using the Power Pivot add-in. The course also requires students to complete a data analysis project along with a presentation about the business insights drawn from the data analysis results. The project requires students to understand the business problem, identify and apply the appropriate analytic and visualization tools, and communicate the insight in an intuitive and effective manner.

Prerequisite(s): CIS 185, MSD 200 & MSD 201.

CIS 360 Data Mining 3 Credits

This course deals with modern technologies for data analysis. Hands-on exercises for data retrieval, data visualization and predictive analytics will be carried out using up-to-date methodologies and software tools. The full data mining life cycle will be covered from recognizing business problems and opportunities amenable to data mining analysis through deploying and monitoring solutions.

Prerequisite(s): CIS 185.

CIS 370 Systems Analysis and Design Project 3 Credits

Topics include modeling techniques and methodologies to address the planning, analysis, design, and implementation of high quality systems, delivered on time and within budget. Using rapid application development tools, students will also construct an operational system within the span of a single semester. Issues and tools related to the management of project teams are also discussed.

Prerequisite(s): CIS 330.

ACC 320 Accounting Info Systems 3 Credits

This course provides an introduction to accounting information systems and enterprise-wide, process-focused information systems. Topics include quality of data for decision usefulness, internal control concepts and documentation tools, and database theory and applications.

Prerequisite(s): ACC 310.

ECO 450 Seminar in Economic Research 3 Credits

Students in the course learn to conduct economic research by engaging in an actual community-based research project. At the beginning of the semester, students are assigned to a community-based organization. As a team, students meet with the client, devise a plan of action, collect and analyze data and other information, and write a report to the client. At the end of the semester, students present their findings to the client. Students are permitted to take ECO 450 up to two times for credit.

Prerequisite(s): Permission of instructor.

FIN 315 Financial Modeling 3 Credits

Provides instruction in computer use beyond what is available in other finance courses. Topics include more sophisticated applications of computers in financial management, investments, and other areas of finance and business. Students work on cases and projects which require more advanced usage of spreadsheets and other software and databases.

Prerequisite(s): CIS 185 and FIN 220.

HTH 215 Population Healthcare Management 3 Credits

In this course, we study how disease is distributed in populations and of the factors that influence or determine this distribution. This course introduces the basic methods and tools epidemiologists use to study the origin and control of non-communicable and communicable diseases so that policies and mechanisms to enhance the health of populations can be developed.

Prerequisite(s): MSD 201 or MTH 120 or ENV 200 or PSY 201.

MKT 366 Marketing Research 3 Credits

Topics include specific research procedures in gathering, processing, analyzing, and presenting information relevant to marketing problems: advertising planning and effectiveness; product development; distribution channels; sales techniques; consumer behavior; and forecasting. Student learning about research planning, implementation, and interpretation is facilitated by the use of projects or cases.

Prerequisite(s): MKT 200; MSD 200, MSD 201; junior standing; Required for marketing and advertising majors.

MSD 320 Quantitative Methods for Business Forecasting 3 Credits

A study of the various quantitative techniques applicable to the problems of forecasting that occur in business and industry. Topics may include the regression techniques of causal modeling, as well as the moving average, exponential smoothing, and Box-Jenkins approaches of time series analysis. All methods are illustrated with the use of realistic forecasts.

Prerequisite(s): MSD 201 or MTH 341.

MSD 325 Regression/Analysis Variance 3 Credits

This course examines the use of applied linear statistical models to adequately describe practical relationships in business and economics. The implementation of a popular statistical computing package to analyze realistic data sets is an important component of the course. Topics include simple and multiple linear regression, model diagnostics and remedial measures, and the analysis of variance.

Prerequisite(s): MSD 201 or MTH 341.

Economics (B.S.B.A.)

Program Overview

Rider's economics students master the tools needed to succeed in their careers and in their lives. Studying economics helps develop skills for careers in business, law, teaching, public administration and research, while also building an understanding of contemporary social issues. In this challenging world, few areas of study are more relevant and essential than economics.

Rider economics majors are in demand among consulting firms, corporations, private banking and financial institutions, government agencies and non-profit agencies. Many graduates begin their careers as analysts, then progress to management positions in business and government. An undergraduate degree in economics from Rider also provides outstanding preparation for graduate study in economics, business and law.

Curriculum Overview

Our economics program offers a flexible curriculum that allows you to target your specific career goals, whether you are a business or liberal arts major. The program offers a Bachelor of Science through the College of Business Administration, or a Bachelor of Arts through the College of Liberal Arts, Education and Sciences.

The curriculum allows students to select classes based on their area of interest. For example, a B.A. in economics with a minor in political science provides an excellent foundation for a career in law or politics. Students with a double major in economics (B.S.B.A.) and finance are prepared for careers in the financial and corporate sectors.

Studies center on macroeconomics and microeconomics. Students become trained in economic theory while learning how to apply principles and concepts to specific problems. This is done via small class sizes so that students can interact closely with faculty.

A minor in economics also is available, allowing students from different fields to study international economics, public policy and economic theory.

Notes:

- This accelerated plan assumes no AP or other credits were transferred into Rider University.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as Global/Cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 398, LDP 200, LDP 220, MGT 355, or MGT 363.
- Students are strongly suggested to complete a credit-bearing experiential course (e.g., Internship, Co-op, Study Tour, study abroad, ENT 448, ECO 450.)

Courses and Descriptions**ECO 200 Principles of Macroeconomics 3 Credits**

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 201 Principles of Microeconomics 3 Credits

Market price systems are analyzed. The nature and characteristics of consumer and producer behavior, the theory of pricing in competitive and noncompetitive markets, and determination of the distribution of output are evaluated. Welfare, social control, monopoly, and income inequality are explored in the light of price theory. The role of the United States in the world economy is explored.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 210 Intermediate Macroeconomics 3 Credits

An analytical study of modern aggregate economic theory. Emphasizes the measurement and determination of income, employment, and price levels, as well as economic policy in theory and practice.

Prerequisite(s): ECO 200 and ECO 201.

ECO 211 Intermediate Microeconomics 3 Credits

This course is designed to give the student a thorough understanding of microeconomic theory. As such, the course will analyze the behavior of both consumers and producers, and how this behavior determines the price and quantity observed in the market. The course objective is to provide students with the necessary theoretical background to enable them to solve meaningful and practical problems. Thus, the course is both theoretical and applied in its orientation. The course will emphasize that economic theory can be used not only to solve market oriented problems, but social and public policy problems as well.

Prerequisite(s): ECO 200 and ECO 201.

ECO 300 Business Conditions Analysis/Forecast 3 Credits

Business conditions change daily. Students study them as they change, learning to understand them in the light of economic theory, learning how each part of the economy is affected, and learning the advantages and limitations of the most reliable forecasting methods.

Prerequisite(s): ECO 200, MSD 201.

ECO 301 Managerial Economics 3 Credits

Intensively examines the theory of the firm with applications to the solution of such managerial problems as demand forecasting, the nature and behavior of costs, and product pricing. Introduces the use of simple mathematical and statistical tools that are employed with economic analysis for solving managerial problems.

Prerequisite(s): ECO 200 and ECO 201 and MSD 201 or permission of instructor.

ECO 305 Internatl Trade and Investment 3 Credits

Studies the theory, institutions, and structures underlying the international flow of trade and investment. Topics are: the theory of international trade; balance of payment analysis; the international monetary system; adjustment to balance of payment disequilibrium; regional economic integration; the economic effects of trade restrictions; and trade and foreign investment problems of developing nations.

Prerequisite(s): ECO 200 and ECO 201.

ECO 315 Comparative Economic Systems 3 Credits

Provides a conceptual framework for classifying and comparing economic systems. Presents theory of the capitalist market economy and case studies of the U.S., Japanese, French, and Swedish economies. Examines theory of the centrally planned economy, its transition, and case studies of the Soviet and its successor states, Chinese, and East European economies. Case studies are necessarily limited, concentrating on selected topics, such as transition strategies, industrial policy, etc.

Prerequisite(s): ECO 200 and ECO 201.

ECO 325 Industrial Organization 3 Credits

Explores the relationship between market structure and performance. Topics include concentration in individual industries, product differentiation and entry barriers, pricing and marketing policies, and antitrust policies and their consequences.

Prerequisite(s): ECO 200 and ECO 201.

ECO 326 Economics of Sports 3 Credits

The overall objective of this course is to deepen student understanding of microeconomic principles by applying microeconomic concepts to the analysis of professional and amateur sports. This course will utilize concepts from many different microeconomic specialties, (primarily Industrial Organization, Labor Economics and Public Finance). The tools from these different microeconomic fields will be used to explain and analyze the operation of professional sports teams and leagues in the U.S. with an emphasis on baseball, football, basketball and hockey. International comparisons will be made between professional sports in the U.S. and the rest of the world. The course will also analyze the not-for-profit sports sector, focusing on college sports and the National Collegiate Athletic Association.

Prerequisite(s): ECO 201.

ECO 330 Labor Market Analysis 3 Credits

Intensive study of the economics of the labor market, which examines the determinants of labor supply and demand, and market equilibrium in the labor market. This enables the student to understand what determines wages, labor force participation, occupational choice, the extent of education and training, unemployment, poverty, union membership, and discrimination in the labor market.

Prerequisite(s): ECO 200 and ECO 201.

ECO 335 Economics of the Public Sector 3 Credits

Analyzes the economic roles of government: allocation; distribution; and stabilization. The course examines the tools used by governments, especially the federal government, such as taxation, expenditures, regulations and laws in order to achieve economic goals. The course will give special attention to social regulation.

Prerequisite(s): ECO 200 and ECO 201.

ECO 336 Economics of Health Care Sys 3 Credits

This course presents ways in which economic analysis can be used to explain issues in the health care industry. Microeconomic tools will be used to describe the behavior of consumers, producers, and third parties of the health care sector. The course also investigates the role of government in regulating the health care sector, and in providing services to the poor and elderly. Finally, we will use this foundation to examine some recent changes in this industry, and to analyze the most recent proposals for further changes.

Prerequisite(s): ECO 201 or HTH 205.

ECO 365 Post-Soviet Economy 3 Credits

Studies the contemporary post-Soviet economic system, with emphasis on institutions, policies and issues related to business opportunities in this area. Topics covered include the historic, geographic, political, and cultural setting, planning and plan implementation in the traditional system, current reforms and prospects for the future, with special reference to the foreign trade institutions and experience of foreign firms doing business in the post-Soviet Union and Eastern European countries.

Prerequisite(s): ECO 200 and ECO 201 or permission of instructor.

ECO 450 Seminar in Economic Research 3 Credits

Students in the course learn to conduct economic research by engaging in an actual community-based research project. At the beginning of the semester, students are assigned to a community-based organization. As a team, students meet with the client, devise a plan of action, collect and analyze data and other information, and write a report to the client. At the end of the semester, students present their findings to the client. Students are permitted to take ECO 450 up to two times for credit.

Prerequisite(s): Permission of instructor.

ECO 490 Independent Research and Study 3 Credits

Topic to be approved by professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation.

ECO 491 Internship/Independent Study 3 Credits

This course is available to qualified economics majors and minors. Evaluation is based on a performance appraisal provided by the participating firm and a project/paper judged by the major's internship director. This course can be used as a business or free elective. Grading is done on a pass/fail basis.

Prerequisite(s): Permission of instructor.

Entrepreneurial Studies

Program Overview

Rider entrepreneurial studies (ES) students develop the skills and knowledge needed to become independent, innovative and informed entrepreneurs. Entrepreneurs look at the world differently, and see opportunity where others do not. The programs emphasize practical experience and holistic thinking, encourage students to develop their own business plan, and enhance analytical skills through experiential classes.

Entrepreneurs and small businesses are the engines for job creation and economic growth. Career opportunities for entrepreneurial students are as boundless as their creativity, imagination and work ethic. Many employers value students with an entrepreneurial attitude and their ability to think outside the box.

The ES program has two key learning objectives. First, encourage entrepreneurial thinking among students. This entails the ability to recognize, evaluate and pursue opportunities. Second, build professional skills relevant for starting and managing a new venture. These include

research, business planning, and understanding functional aspects of small business management and operations.

Curriculum Overview

Rider entrepreneurial studies students gain an education in business, plus the skills, attitude and experience needed to create new ventures or revitalize established businesses. They learn to identify and understand different types of start-up ventures, how to build and present business plans, and how to evaluate sources of financing for start-up and other types of ventures.

The program's interdisciplinary format offers the option of double majoring with another business discipline, such as management, marketing, finance, sports management, information systems, and others. Students also can choose the entrepreneurial studies concentration, a four-course program that is paired with a major in the College of Business Administration.

¹ Accounting majors double majoring in Entrepreneurial Studies may substitute ACC 410 Fund of Federal Taxation for the ENT 335 requirement.

For graduation, students must achieve an overall 2.0 GPA in the major, with no course grade less than "C-".

Students are also encouraged to take ENT 491 Internship, ENT 399 Co-Op, and ENT 100 Intro to Entrepreneurship as free electives.

Entrepreneurial Studies Concentration Requirements

(12 credits)

The ES concentration is an option for any business student desiring to focus on starting a new venture, or working in a small or family firm environment. The concentration must be taken with a major in the College of Business Administration.

The ES concentration requires four business courses as outlined below (courses to be counted as either major or free electives):

ENT 348	Small Business Management	3
ENT 410	New Venture Planning	3

Select two of the following, one of which must be an ENT-prefixed course: 6

ENT 210	Sports Entrepreneurship
BUS 210	Intro to Law: Contracts
MKT 250	Retailing Management
or MKT 320	Consumer Behavior
ENT 260	Family Business Management
MGT 310	Intro to Human Resource Mgmt
or MGT 363	Management Skills
CIS 325	User-Centered Design
or CIS 340	Electronic Commerce
ENT 335	Small Business Tax Planning ¹
ENT 350/FIN 350	Entrepreneurial Finance
ENT 375	International Entrepreneurship
ENT 420	Student Venture Experience
ENT 444	Special Topics
ENT 448	Small Business Consulting Sem

ENT 490	Independent Study	
Total Credits		12

¹ Accounting majors can substitute ACC 410 Fund of Federal Taxation for ENT 335.

Students must achieve an overall 2.0 GPA in the concentration, with no course grade less than "C-".

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Footnotes

- ¹ ENT 100 is not required. If a student does not take ENT 100, the student must complete an additional 3 credit free elective.
- ² In addition to the three required major courses (ENT 348, ENT 335, and ENT 410), ENT majors must take three additional ENT Major Electives from the following list, at least one of which must be an ENT-prefixed course: BUS 210, CIS 325 or CIS 340, ENT 210, ENT 260, ENT 350/FIN 350, ENT 375, ENT 420, ENT 444, ENT 448, ENT 490, MGT 310 or MGT 363, MKT 250 or MKT 320.
- ³ ENT majors have the option of completing MGT 363 for their major requirement as well as for their Leadership Elective requirement. If they choose to do this, they must complete another 3 credit free elective.
- ⁴ Students are required to take 6 credits of International Business Electives which can be fulfilled as major courses (ENT 375 International Entrepreneurship) or as free elective courses.

Notes:

- This accelerated plan assumes no AP or other credits were transferred into Rider University.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as Global/Cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 398, LDP 200, LDP 220, MGT 355, or MGT 363.
- Students are strongly suggested to complete a credit-bearing experiential course (e.g., Internship, Co-op, Study Tour, study abroad, ENT 448, ECO 450.)

Courses and Descriptions

ENT 100 Intro to Entrepreneurship 3 Credits

ENT 210 Sports Entrepreneurship 3 Credits

Sports Entrepreneurship will introduce students to entrepreneurship in the sports industries as they explore opportunities and challenges for new ventures in this sector. Using an industry's business model, students will identify competitive advantages and understand what is required for startup success.

ENT 260 Family Business Management 3 Credits

This course is directed at understanding the family-owned and managed firm. Topics included are the strengths and weaknesses of a family firm, the dynamics of the family and business interactions, conflict resolution, succession planning and ownership transfer. The course will help individuals involved with a family firm, regardless if they are a family member.

Prerequisite(s): MGT 201 and junior standing.

ENT 335 Small Business Tax Planning 3 Credits

This course provides an understanding of the key tax issues faced by small businesses and their business implications. It also familiarizes prospective business owners with various tax filing requirements so that they can use the expertise of tax professionals more effectively.

Prerequisite(s): ACC 210.

ENT 348 Small Business Management 3 Credits

The role of small business in the American economy is examined. Favorable practices, policies, functions, principles and procedures of and for the small business entrepreneur and owner-manager are studied. Includes learning a method to evaluate a new venture idea.

Prerequisite(s): MGT 201 or permission of instructor and junior standing.

ENT 350 Entrepreneurial Finance 3 Credits

This course covers the techniques for acquiring financial resources as a firm advances through successive business stages: seed, start-up, struggling, growing, and stable. In addition, it examines recent trends in credit markets and the latest financial innovations as they impact the process of financing the venture's growth.

Prerequisite(s): FIN 300.

ENT 375 International Entrepreneurship 3 Credits

Students will learn how new or small ventures enter international markets. Requirements include developing a case about starting or running a venture in a single country of the student's choice.

Prerequisite(s): MGT 201 and junior standing.

ENT 399 Entrepreneurship Co-Op 6 Credits

This course provides students with a semester-long supervised employment with an entrepreneurial firm/organization. Students are required to maintain a journal, complete a reflection paper and are evaluated by the participating firm/organization. Eligible students are entrepreneurial studies juniors or seniors with a 3.0 GPA or better. Co-op credits count as free electives. Grading is on a pass/fail basis.

Prerequisite(s): ENT 348 or permission of program director.

ENT 410 New Venture Planning 3 Credits

This course will require students to select a business and prepare a complete new venture plan for it. This plan would identify the product and its target market, analyze its market potential, choose the location, scale of operation, layout, staffing, type of financing, estimate the revenues and profits, and present the income statement, balance sheet, and the cash flow projections.

Prerequisite(s): ENT 348 or permission of instructor.

ENT 420 Student Venture Experience 3 Credits

Students will start and run a small business while under the supervision and guidance of faculty. Students will take a business plan developed through New Venture Planning (ENT 410) and execute it. Students will experience the launch process and learn, hands on, how to adapt to the marketplace. Some businesses started in this class may also be eligible for seed venture funding from Rider.

Prerequisite(s): ENT 348, ENT 410, and permission of instructor.

ENT 444 Special Topics 3 Credits

ENT 448 Small Business Consulting Sem 3 Credits

This course utilizes student teams to assist existing small businesses in solving problems or researching opportunities. Students will spend the majority of time in the field utilizing an experiential learning approach. Weekly activity logs, proposal development, and project completion are required. Restricted to seniors.

Prerequisite(s): ENT 348 and permission of instructor.

ENT 490 Independent Study 3-4 Credits

Topic to be approved by professor and program chairperson. Available to juniors and seniors.

ENT 491 Internship 3 Credits

Entrepreneurship for Non-business Majors Program Overview

Rider non-business students wishing to take a minor in entrepreneurial studies will develop the skills and know-how they need to become independent, innovative and informed business owners. The minor emphasizes practical experience and holistic thinking, encourages students to develop their own business plan, and enhances analytical skills through experiential classes.

For students in the arts, sciences, or education who may want to have their own business based on their skills and talents, the minor in entrepreneurship can help you reach your dream.

The entrepreneurship minor has two key learning objectives. First, encourage entrepreneurial thinking among students. This entails the ability to recognize, evaluate and pursue opportunities. Second, build professional skills relevant for starting and managing a venture. These include research, business planning, and understanding functional aspects of small business management and operation.

Rider entrepreneurship students gain an education in business, plus the skills, attitude and experience needed to create new ventures or revitalize established businesses. They learn to identify and understand different types of start-up ventures, how to build and present business plans, and how to evaluate sources of financing for start-up and other types of ventures.

Finance

Program Overview

Rider's finance program was designed to meet the various career goals of different students. Many fields require an understanding of both the process of making financial decisions and how those decisions will affect others. Rider's finance major combines a solid analytical foundation with broad coverage on how the financial system operates. Programs of study are structured to benefit students who will enter both finance and non-finance careers.

Rider finance majors have found careers regionally and around the world in business, industry, government service and the non-profit sector. Career paths of our finance graduates include portfolio manager, financial analyst, banker, insurance underwriter, financial planner, corporate financial manager, credit analyst, financial consultant and more.

Curriculum Overview

Our diversified program allows students to acquire finance and general business knowledge needed to compete in today's job market.

For example, Rider offers a Certificate in Investment Analysis Program (p. 65) that prepares students for a variety of careers in investments and corporate finance. The program also provides courses for students who plan to take the Chartered Financial Analyst ® (CFA) Level 1 Exam.

We also offer concentrations in Financial Management and Financial Services Marketing. The Concentration in Financial Management (p. 35) provides preparation for students who wish to take the Certified Management Accounting (CMA) examinations. This certification can be very worthwhile for those who intend to enter careers in Corporate Finance/Accounting. (p. 40) The Concentration in Financial Services Marketing (p. 35) is designed for students interested in the many careers requiring knowledge of finance as well as strong marketing skills.

Non-business majors might find our Minor in Finance to be a worthwhile addition to their program. They can receive their non-business degree and at the same time acquire considerable business knowledge and skills from our Finance minor (p. 35).

In short our flexible program allows students to customize their major to fit their individual career interests. They can choose from a variety of concentrations and electives. Courses offerings range from investment analysis and portfolio management to financial modeling and personal financial planning.

* **Students are required to complete 6 credits of International Business Electives which can be fulfilled as major course elective (FIN 308 International Finance) or free elective courses.**

Notes:

- This accelerated plan assumes no AP or other credits were transferred into Rider University.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Electives can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 398, LDP 200, LDP 220, MGT 355, or MGT 363.
- Students are strongly suggested to complete a credit-bearing experiential course (e.g., internship, co-op, study tour, study abroad, ENT 448, ECO 450.)

Courses and Descriptions**FIN 200 Managing Your Money 3 Credits**

An introduction to the analysis of a wide range of financial decisions which individuals encounter over their careers and lifetime. Topics include financial goals, tax planning, home ownership versus renting, consumer credit, money management and investments, and managing risk with insurance. This course is open to all Rider students, and it counts as a free elective or a business elective. It cannot be used as finance elective.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

FIN 305 Personal Financial Planning 3 Credits

This course focuses on practical issues and problems involving personal financial budgeting, use of credit, selection of banking services, insurance needs, real estate, investments, tax planning, and retirement planning. An important objective of the course is to provide the student with the tools that are utilized in making personal financial decisions and how to apply those tools for a variety of financial needs.

Prerequisite(s): FIN 220.

FIN 307 Financial Markets & Institut 3 Credits

This course provides an introduction to the organization and behavior of financial markets and institutions in the economy. The factors determining security prices and interest rates in the money and capital markets are analyzed. An overview of all major financial institutions is presented. In addition, market returns, the regulatory environment, and monetary policy are examined.

Prerequisite(s): ECO 200 and junior standing.

FIN 308 International Finance 3 Credits

Financial management in the international environment. Topics include balance of payments, foreign exchange markets, arbitrage, hedging of currency risk, country risk management, and the evaluation of foreign investment opportunities.

Prerequisite(s): FIN 220.

FIN 309 Intermediate Corporate Finance 3 Credits

This course builds on and extends the concepts of financial management learned in FIN 220. The course examines long-term corporate financing and investment decisions and how those decisions interface with each other. Topics covered include: cost of capital, financial planning and analysis, capital budgeting, capital structure and dividend policy.

Prerequisite(s): FIN 220.

FIN 312 Investments 3 Credits

The fundamentals of investing in stocks, bonds, and other negotiable instruments are covered. Major topics include trading on securities markets, mutual funds, international investing, margin accounts, short sales, determinants of securities prices, and investment risks. Stock options, financial futures, convertible securities, and implications of taxes on investment decisions are also discussed.

Prerequisite(s): FIN 220.

FIN 315 Financial Modeling 3 Credits

Provides instruction in computer use beyond what is available in other finance courses. Topics include more sophisticated applications of computers in financial management, investments, and other areas of finance and business. Students work on cases and projects which require more advanced usage of spreadsheets and other software and databases.

Prerequisite(s): CIS 185 and FIN 220.

FIN 330 Corporate Cash Management 3 Credits

This course is designed for business students seeking an understanding of modern principles and techniques for corporate treasury management. The course material is useful for finance, accounting, and banking professionals or small business owners. Topics include analysis of liquidity and solvency, credit and accounts receivable management, cash collection and disbursement systems, short-term investment and borrowing, management of treasury information and technology, multinational cash management, and other related topics.

Prerequisite(s): FIN 220.

FIN 340 Risk Management 3 Credits

This course examines the risk management process as applied to the firm as a whole. It integrates the management of all risks facing the firm: strategic, financial, hazard, and operational. Techniques for identifying risk, measuring and analyzing it, and selecting an appropriate treatment will be explored.

Prerequisite(s): FIN 220.

FIN 350 Entrepreneurial Finance 3 Credits

This course covers the techniques for acquiring financial resources as a firm advances through successive business stages: seed, start-up, struggling, growing, and stable. In addition, it examines recent trends in credit markets and the latest financial innovations as they impact the process of financing the venture's growth.

Prerequisite(s): FIN 220.

FIN 360 Fixed Income and Derivatives 3 Credits

This course centers on the quantitative portion of the Chartered Financial Analyst (CFA) level 1 curriculum, which includes materials on fixed-income risk and return, fundamentals of risk analysis, derivative instruments and risk management applications of option strategies. The goal is to help students prepare for the exam, as well as introduce them to a variety of topics in finance.

Prerequisite(s): FIN 312.

FIN 370 Financial Analysis and Ethics 3 Credits

This course covers the topics of financial reporting and analysis and related ethical issues. The course would benefit students interested in augmenting their ability to understand, analyze and apply the information in financial statements. It provides essential knowledge for students seeking either the Certified Management Accountant (CMA) or Chartered Financial Analyst (CFA) certifications. Specifically, the course covers the Ethics and Professional Standards of the CFA curriculum, and materials on financial reporting quality and financial statement analysis. Course goals are to help students prepare for the certification exams, as well as introduce all interested students to a variety of topics in financial analysis and ethics.

Prerequisite(s): FIN 312 or POI.

FIN 380 Real Estate 3 Credits

Real estate finance and related subjects in real estate are examined. Topics include measuring cash flows and taxes, valuation methods for real estate investment decisions, location and value in real estate, home ownership, legal matters, and financing methods and techniques.

Prerequisite(s): FIN 220.

FIN 399 The Co-Operative Experience 6 Credits

The co-op program provides students with an opportunity to work full-time in a company and apply what they have learned in their finance and other business classes. It also enhances students' employment opportunities since many employers use a co-op program as a first step before they hire full-time employees. Eligible students include finance majors with at least junior status, a minimum overall GPA of 3.0, and a minimum GPA of 3.0 in any finance coursework completed prior to the submission of the co-op application. Co-op credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): FIN 220.

FIN 412 Investment Analysis 3 Credits

Real-world application of the concepts and techniques of investment analysis and portfolio theory introduced in FIN 312. Students interact with and make recommendations to professional portfolio managers. Topics include analysis and forecasts of business conditions, market interest rates, international opportunities, and corporate profits. Emphasis is placed on the valuation of securities, stock selection, investment timing, technical analysis, and management of portfolio risk with options, futures, and other tools.

Prerequisite(s): FIN 312 or permission of instructor.

FIN 469 Special Topics in Finance 3 Credits

This course is occasionally offered, with the topics and prerequisites set by the finance program.

FIN 490 Independent Research and Study 3 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation. This course can be used as a business or free elective, but with prior approval it can also be used as finance elective.

FIN 491 Finance Internship 1-3 Credits

The internship offers qualified junior and senior finance majors supervised employment with participating companies. The internship may be taken during the fall or spring semester or during the summer session. Students are evaluated periodically by senior staff members of the participating firms and are required to complete a term paper that will be reviewed by the major's internship director. Internship credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis. **Prerequisite(s):** permission of instructor.

Finance Minor for Non-business Majors

Program Overview

The finance minor is designed to meet the needs of students who have a variety of career goals. For many types of jobs, it is essential that one understands the process of financial decision-making and the environment in which those decisions take place. To provide this understanding, the minor program consists of a well-rounded course of study in principles in macroeconomics, personal financial planning, management, entrepreneurial finance and other related courses.

Minor Offered

- Minor in Finance

Courses and Descriptions

FIN 200 Managing Your Money 3 Credits

An introduction to the analysis of a wide range of financial decisions which individuals encounter over their careers and lifetime. Topics include financial goals, tax planning, home ownership versus renting, consumer credit, money management and investments, and managing risk with insurance. This course is open to all Rider students, and it counts as a free elective or a business elective. It cannot be used as finance elective.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

FIN 305 Personal Financial Planning 3 Credits

This course focuses on practical issues and problems involving personal financial budgeting, use of credit, selection of banking services, insurance needs, real estate, investments, tax planning, and retirement planning. An important objective of the course is to provide the student with the tools that are utilized in making personal financial decisions and how to apply those tools for a variety of financial needs.

Prerequisite(s): FIN 220.

FIN 307 Financial Markets & Institut 3 Credits

This course provides an introduction to the organization and behavior of financial markets and institutions in the economy. The factors determining security prices and interest rates in the money and capital markets are analyzed. An overview of all major financial institutions is presented. In addition, market returns, the regulatory environment, and monetary policy are examined.

Prerequisite(s): ECO 200 and junior standing.

FIN 308 International Finance 3 Credits

Financial management in the international environment. Topics include balance of payments, foreign exchange markets, arbitrage, hedging of currency risk, country risk management, and the evaluation of foreign investment opportunities.

Prerequisite(s): FIN 220.

FIN 309 Intermediate Corporate Finance 3 Credits

This course builds on and extends the concepts of financial management learned in FIN 220. The course examines long-term corporate financing and investment decisions and how those decisions interface with each other. Topics covered include: cost of capital, financial planning and analysis, capital budgeting, capital structure and dividend policy.

Prerequisite(s): FIN 220.

FIN 312 Investments 3 Credits

The fundamentals of investing in stocks, bonds, and other negotiable instruments are covered. Major topics include trading on securities markets, mutual funds, international investing, margin accounts, short sales, determinants of securities prices, and investment risks. Stock options, financial futures, convertible securities, and implications of taxes on investment decisions are also discussed.

Prerequisite(s): FIN 220.

FIN 315 Financial Modeling 3 Credits

Provides instruction in computer use beyond what is available in other finance courses. Topics include more sophisticated applications of computers in financial management, investments, and other areas of finance and business. Students work on cases and projects which require more advanced usage of spreadsheets and other software and databases.

Prerequisite(s): CIS 185 and FIN 220.

FIN 330 Corporate Cash Management 3 Credits

This course is designed for business students seeking an understanding of modern principles and techniques for corporate treasury management. The course material is useful for finance, accounting, and banking professionals or small business owners. Topics include analysis of liquidity and solvency, credit and accounts receivable management, cash collection and disbursement systems, short-term investment and borrowing, management of treasury information and technology, multi-national cash management, and other related topics.

Prerequisite(s): FIN 220.

FIN 340 Risk Management 3 Credits

This course examines the risk management process as applied to the firm as a whole. It integrates the management of all risks facing the firm: strategic, financial, hazard, and operational. Techniques for identifying risk, measuring and analyzing it, and selecting an appropriate treatment will be explored.

Prerequisite(s): FIN 220.

FIN 350 Entrepreneurial Finance 3 Credits

This course covers the techniques for acquiring financial resources as a firm advances through successive business stages: seed, start-up, struggling, growing, and stable. In addition, it examines recent trends in credit markets and the latest financial innovations as they impact the process of financing the venture's growth.

Prerequisite(s): FIN 220.

FIN 360 Fixed Income and Derivatives 3 Credits

This course centers on the quantitative portion of the Chartered Financial Analyst (CFA) level 1 curriculum, which includes materials on fixed-income risk and return, fundamentals of risk analysis, derivative instruments and risk management applications of option strategies. The goal is to help students prepare for the exam, as well as introduce them to a variety of topics in finance.

Prerequisite(s): FIN 312.

FIN 370 Financial Analysis and Ethics 3 Credits

This course covers the topics of financial reporting and analysis and related ethical issues. The course would benefit students interested in augmenting their ability to understand, analyze and apply the information in financial statements. It provides essential knowledge for students seeking either the Certified Management Accountant (CMA) or Chartered Financial Analyst (CFA) certifications. Specifically, the course covers the Ethics and Professional Standards of the CFA curriculum, and materials on financial reporting quality and financial statement analysis. Course goals are to help students prepare for the certification exams, as well as introduce all interested students to a variety of topics in financial analysis and ethics.

Prerequisite(s): FIN 312 or POI.

FIN 380 Real Estate 3 Credits

Real estate finance and related subjects in real estate are examined. Topics include measuring cash flows and taxes, valuation methods for real estate investment decisions, location and value in real estate, home ownership, legal matters, and financing methods and techniques.

Prerequisite(s): FIN 220.

FIN 399 The Co-Operative Experience 6 Credits

The co-op program provides students with an opportunity to work full-time in a company and apply what they have learned in their finance and other business classes. It also enhances students' employment opportunities since many employers use a co-op program as a first step before they hire full-time employees. Eligible students include finance majors with at least junior status, a minimum overall GPA of 3.0, and a minimum GPA of 3.0 in any finance coursework completed prior to the submission of the co-op application. Co-op credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): FIN 220.

FIN 412 Investment Analysis 3 Credits

Real-world application of the concepts and techniques of investment analysis and portfolio theory introduced in FIN 312. Students interact with and make recommendations to professional portfolio managers. Topics include analysis and forecasts of business conditions, market interest rates, international opportunities, and corporate profits. Emphasis is placed on the valuation of securities, stock selection, investment timing, technical analysis, and management of portfolio risk with options, futures, and other tools.

Prerequisite(s): FIN 312 or permission of instructor.

FIN 469 Special Topics in Finance 3 Credits

This course is occasionally offered, with the topics and prerequisites set by the finance program.

FIN 490 Independent Research and Study 3 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation. This course can be used as a business or free elective, but with prior approval it can also be used as finance elective.

FIN 491 Finance Internship 1-3 Credits

The internship offers qualified junior and senior finance majors supervised employment with participating companies. The internship may be taken during the fall or spring semester or during the summer session. Students are evaluated periodically by senior staff members of the participating firms and are required to complete a term paper that will be reviewed by the major's internship director. Internship credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): permission of instructor.

Fraud and Business Forensics Concentration

Program Overview

The Business Forensics concentration is designed to prepare students for a career in the field of fraud investigation and forensics. The curriculum encompasses fraud examinations, financial investigations, the psychology of white-collar crime, forensic interrogations and evidence management, and presentation for civil and criminal trials. A variety of teaching tools are employed including case studies, mock investigations, mock trials, guest speakers and professionals who are experts in their areas.

The program offers a track in either Accounting or Information Systems.

Admission

Current undergraduate College of Business Administration (CBA) students majoring in Accounting or Information Systems may choose a concentration on Fraud and Business Forensics. CBA students who want to declare this concentration should do so through the CBA Undergraduate Academic Coordinator in the Dean's Office in Sweigart Hall a semester prior to beginning coursework.

Degree Offered

- Concentration in Fraud and Business Forensics

Contact

Dorothy McMullen, Ph.D.

Associate Professor of Accounting

609-895-5518
mcmullen@rider.edu

Program Website: Fraud and Business Forensics Concentration (<http://www.rider.edu/academics/colleges-schools/college-business-administration/undergraduate-majors-programs/accounting-0>)

Associated Department: Department of Accounting

A concentration in Fraud and Business Forensics consists of four courses that can be completed as part of the undergraduate Accounting or Information Systems program. The concentration prepares students for a career in the field of fraud investigation and forensics by providing skills and tools to both prevent fraud from occurring and discovering fraud after it has occurred.

Required Courses

ACC 321	Internal Auditing	3
ACC 325	Fraud Examination and Business Forensics	3
ACC 450	Business Forensic Application	3

Tracks

Select one of the following Tracks:	3
-------------------------------------	---

Accounting Track

ACC 320	Accounting Info Systems
or ACC 400	Principles of Auditing

Information Systems Track

CIS 370	Systems Analysis and Design Project
---------	-------------------------------------

Total Credits	12
---------------	----

Students must achieve a minimum 2.5 GPA in the coursework required for the concentration, with no grade lower than a "C" in any course in the concentration.

Courses and Descriptions

- **ACC-325 - Fraud Examination and Business Forensics**
This course introduces students to the prevalence of fraud and fraudulent financial reporting in all forms of business, including the many methods used by employees and managers to perpetrate fraud. Topics will include: the motivation of individuals to commit fraud, various types of fraud schemes perpetrated in the workplace, as well as the various tools and techniques that are used to investigate, detect and prevent fraud. Prerequisite: ACC-210
- **ACC-321 - Internal Auditing**
This course introduces the internal audit profession, including understanding the nature and activities associated with the internal audit process. Topics include: international auditing standards, risk assessment including internal control system evaluation, business processes, and the relationship of management and employee fraud to the internal audit process. Prerequisite: ACC-220.
- **ACC-450 - Business Forensic Application**
This course integrates various business disciplines to perform complex investigative cases and analyses, thus demonstrating mastery of the knowledge and skills required to be effective forensic professionals. The course covers how to manage and present digital and technical evidence gathered for forensic litigation cases, including the ability to be an expert witness in court. Prerequisites: ACC-325, ACC 321.
- **ACC-320 - Accounting Information Systems**
This course introduces accounting information systems and enterprise-wide, process-focused information systems. Topics include quality of data for decision usefulness, internal control concepts and documentation tools, and database theory and applications. Prerequisite: ACC-310.
- **ACC-400 - Principles of Auditing**
This course introduces financial statement audits performed by certified public accountants. Topics include corporate governance, the audit environment, professional standards, audit methodology, and audit report preparation. The course also provides an overview of other types of assurance and non-assurance services provided by CPA firms. Prerequisites: ACC-302 and ACC-311.
- **CIS-370 - Systems Analysis and Design Project**
Topics include modeling techniques and methodologies to address the planning, analysis, design, and implementation of high quality systems, delivered on time and within budget. Using rapid application development tools, students will also construct an operational system within the span of a single semester. Issues and tools related to the management of project teams are also discussed. Prerequisite: CIS-330.

General Business for Non-business Majors

Program Overview

Open to all non-business majors, the General Business minor at Rider University provides students an understanding of the language and basic concepts of business. A minor in business administration can complement any major and may expand career opportunities. Students outside of the CBA can augment their understanding of business by joining business clubs, such as DAARSTOC (<http://www.rider.edu/academics/colleges-schools/college-business-administration/clubs-organizations/daarstoc>), and participate in club events like the Accounting Society's guest speakers' nights.

Curriculum Overview

Students will learn foundational knowledge in business, including the fundamentals of economics and core concepts in financial accounting, management, finance and marketing. In addition, students will understand the legal environment in which business operates.

(24 credits)

MSD 105 or MTH 210	Quantitative Methods for Business Calculus I	3
Select one of the following:		3
MSD 200	Statistical Methods I	
MTH 120	Intro to Applied Statistics	
ENV 200	Statistical and Computer Applications in the Natural Sciences	
PSY 201	Statistics and Research Design	
ECO 200 or ECO 201	Principles of Macroeconomics Principles of Microeconomics	3
ACC 210	Introduction to Accounting	3
MGT 201	Fund Management & Org Behavior	3
MKT 200	Marketing Principles	3
BUS 300	Social & Legal Environment Bus	3

FIN 220	Introduction to Finance	3
Total Credits		24

A minimum of six courses must be taken in business administration and students must achieve a minimum GPA of 2.0 in the minor.

Courses and Descriptions

ACC 210 Introduction to Accounting 3 Credits

This course provides an introduction to basic principles and methods of accounting essential to preparation, understanding and interpretation of financial statements. Topics include accounting for merchandising concerns, current assets, long-term assets, liabilities and equity accounts. A brief overview of internal control is also covered.

BUS 300 Social & Legal Environment Bus 3 Credits

The strategies by which organizations in the private as well as the public sectors interact with, adapt to, and attempt to influence their external environments are explored. The primary emphasis is on evaluating the effect of business and governmental decisions on the quality of life. The role of regulatory agencies and the impact of local and national legislation on organizational behavior are considered.

Prerequisite(s): 54 credits.

ECO 200 Principles of Macroeconomics 3 Credits

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 201 Principles of Microeconomics 3 Credits

Market price systems are analyzed. The nature and characteristics of consumer and producer behavior, the theory of pricing in competitive and noncompetitive markets, and determination of the distribution of output are re evaluated. Welfare, social control, monopoly, and income inequality are re explored in the light of price theory. The role of the United States in the world economy is explored.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ENV 200 Statistical and Computer Applications in the Natural Sciences 4 Credits

This course introduces important statistical concepts, their application, and the usage of computer technology relevant to biological, environmental, geological, and marine problems. Students will learn various graphical and statistical techniques and how to execute them on personal computers. The curriculum emphasizes the integrated nature of these techniques and their importance to meaningful data evaluation and representation. Laboratory exercises are designed to emphasize useful solutions to problems found in many scientific disciplines using computer-based methodologies. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 200L.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MSD 105 Quantitative Methods for Business 3 Credits

The aim of this introductory course is to acquaint students with a number of basic mathematical techniques that will enhance their ability to become effective decision-makers in a realistic business environment. Topics covered include linear equations and inequalities, linear programming, summation notation, geometric series, counting techniques, event probability and discrete random variables. Where appropriate, these tools will be illustrated with examples chosen from business settings.

Prerequisite(s): MSD 104 or a passing grade on the Math Placement Exam.

MSD 200 Statistical Methods I 3 Credits

This course is designed to give the student an understanding of continuous random variables, the elements of statistical inference, and an introduction to how these tools may be useful in one's attempt to reach intelligent conclusions in real-world settings. The focus is on the normal random variable, descriptive statistics, sampling distributions, and the frameworks of estimation and hypothesis testing, particularly as they apply to inference for unknown population means and proportions in the one- and two-sample settings.

Prerequisite(s): MSD 105 or equivalent.

MTH 120 Intro to Applied Statistics 3 Credits

Collection and presentation of data. Measures of location and variation, sampling theory, hypothesis testing, confidence intervals, t-tests, chi-square tests, regression, and correlation. Emphasizes practical applications. Not open to business administration, chemistry, environmental, geosciences, marine sciences, math or liberal studies: marine ecological or environmental emphasis majors.

Prerequisite(s): MTH 102 or MTH 105.

MTH 210 Calculus I 4 Credits

Introduces analytic geometry, functions, limits, and derivatives; differentiation of algebraic and trigonometric functions, curve sketching, maxima and minima, and higher derivatives.

Prerequisite(s): A mathematics SAT score of 650 or ACT score of 29; or a mathematics SAT score of 550 or ACT score of 23 and a passing score on the Pre-Calculus Section of the Math and Science Majors Placement test; or a score of 22 on the Math Skills placement Test and a passing score on the Precalculus Section of the Math and Science Majors Placement test; or passing MTH 105.

PSY 201 Statistics and Research Design 3 Credits

Introduces students to statistics and research methods in the behavioral sciences. Covers the fundamentals of descriptive and inferential statistics, a variety of issues in research design, selected research designs including the case study, correlational and experimental designs. In addition, students will explore the literature in psychology in order to examine the use of statistics and research design in real research problems.

Prerequisite(s): grade of "C" in PSY 105.

Global Supply Chain Management

Program Overview

Rider's award-winning global supply chain management program prepares students for one of the most in-demand specializations in today's business world.

Honored as one of the top 25 programs of its kind in the nation by research firm Gartner Inc., the GSCM program equips students with the skills and experiences needed for a career in the exciting field of global supply chain management.

Through every phase of a product's lifestyle, global supply chain management professionals ensure that customers get the products and services they need and want — faster, better and more cost-effectively — from across town or around the world. They play a critical role to the successful functioning of businesses, healthcare, nonprofit agencies and governments.

Curriculum Overview

Rider's interdisciplinary global supply chain management program combines theory and practice with hands-on internship and mentoring experiences to provide students with an understanding of the important role of supply chain management in domestic and international business.

Faculty include professors with expertise in supply chain management and logistics, information systems, marketing, international business and management science, as well as supply chain professionals from private industry and non-profits. Students learn the many dimensions of supply chain networks that businesses use to acquire, produce, and deliver goods and services across the global marketplace. They also gain skills that prepare them for success in this fast-growing field

ECO 305	International Trade and Investment	
ENT 375	International Entrepreneurship	
FIN 308	International Finance	
MGT 375	International Management	
MKT 330	International Marketing	

Business Analytics and Technology Requirement 3

GSC 385	Management Information Systems for Global Supply Chain Management ²	
---------	--	--

Total Credits 33

¹ Students majoring in Global Supply Chain Management are required to take a 6-credit co-op OR a 3-credit Internship and a 3-credit business elective.

² Students majoring in Global Supply Chain Management may not take CIS 385 Management Information Systems.

Students must achieve a grade of at least "C-" in each of the major courses with a minimum GPA of 2.0 in the major.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year, who change their major, or those who transfer to Rider will follow a different plan to ensure a timely graduation. Each student, with guidance from his or her advisor, will develop a personalized educational plan.

* **Students are required to take 6 credits of International Business Electives which can be fulfilled as major courses or as free elective courses.**

** **This plan assumes the student is taking GSC 399 Co-op. GSCM majors can instead take a 3-credit GSC 491 Internship plus a 3-credit Business Elective. GSCM majors who choose the internship option may have a different 3 year sequence of courses.**

- Assumes no AP or other credits transferred into Rider University.
- Students are required to take 6 credits of International Business Electives which can be fulfilled as major courses or as free elective courses.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 398 Co-op Experience Seminar, LDP 200 Foundations of Leadership, LDP 220 Service Learning Through MOB, MGT 355 Team Management, or MGT 363 Management Skills.

Courses and Descriptions

GSC 115 Introduction to Global Supply Chain Mgt. 3 Credits

This course introduces students to components of global supply chains and issues of managing the global supply chain. It is designed as a survey course to give first or second year business students a general view of supply chain management at both domestic and international levels, as well as familiarize them with basic concepts and major challenges of supply chain management. Delivery of course material will include lectures and guest speakers from industry, and in-class logistics mini cases.

GSC 235 Globl Supply Chn Mgt: External 3 Credits

This course is a detailed discussion of some of the major issues and components of supply chain management that are mainly external to an organization. In other words, it provides an "outward looking" perspective of supply chain management. Topics to be covered include sourcing, procurement, transportation, customer logistics, and distribution. The linkages to internal issues and components of supply chain will be made.

Prerequisite(s): GSC 115.

GSC 315 International Business Tour 3 Credits

GSC 345 Customer Focus 3 Credits

Marketing and supply chain management programs are concerned with the creation and delivery of value to customers and organizations. No longer simply the domain of the warehouse manager or logistics director, supply chain management is viewed by most companies as a mission critical element. Marketing focuses on developing an understanding of customers and markets, creating products and services based on that understanding, and communicating and delivering the value added. This course will teach the student the essential role of marketing in all aspects of successful supply chain management - relationship management, technological and financial management - and it will help the student understand the structure, functions, principles and methods employed in discovering and translating consumer needs and wants into product and service specifications, and then transferring these goods and services from producers to consumers or end users.

Prerequisite(s): GSC 115 and MKT 200.

GSC 355 Global Supply Chain Mgt: Internal Focus 3 Credits

This course is a detailed discussion of some of the major issues and components of supply chain management that are mainly internal to an organization. In other words, it provides an "inward looking" perspective of supply chain management. Topics to be covered include: manufacturing, quality, product design, inventory, and warehousing. The linkages to external issues and components of supply chain will be made.

Prerequisite(s): GSC 115 and MSD 340.

GSC 375 Adv.Sem in Global Outsourcing 3 Credits

The course is aimed at generating a comprehensive understanding of the emergent domain of global business process outsourcing. Various referred to as knowledge process outsourcing, IT-enabled services outsourcing, and business services outsourcing, the industry has seen enormous growth over the last decade and continues to grow. India commands the single largest share of this market but South Africa, Eastern Europe, Philippines, Morocco and Egypt have all emerged as other contenders in this global sector. The course is divided into four modules: the political economy of global outsourcing, process modeling, outsourcing management, and industry analysis. Please note: Students will not receive credit for both CIS 375 and GSC 375.

Prerequisite(s): junior standing.

GSC 385 Management Information Systems for Global Supply Chain Management 3 Credits

The purpose of this junior level management information systems course is to prepare students for today's dynamic business environment by increasing their understanding of IT-enabled global information processing and management. This course has a specific emphasis on the impact and effective utilization of information systems and technology for the global supply chain. Students will gain a solid understanding of the value of business process integration through a combination of conceptual learning, business process analysis, and collaborative decision-making. This will be facilitated through hands-on experience with SAP ERP and analytical software as well as Microsoft Excel. GSC 385 is required for the Global Supply Chain Management major and can fulfill the CIS 385 requirement for all business majors. Please note: Students will not receive credit for both GSC 385 and CIS 385 without prior approval by the Dean's office.

Prerequisite(s): CIS 185 and junior standing.

GSC 399 GSC Co-op Program 6 Credits

The co-op program provides students with an opportunity to work full-time in an organization and apply what they have learned in their global supply chain and other business classes. It also enhances students' employment opportunities since many employers use a co-op program as a first-step before they hire full-time employees. Eligible students include junior and senior global supply chain management majors with a minimum GPA of 3.0. The six credits are intended to be used as business electives, but it is also possible for them to be used as a combination of business and free electives.

Prerequisite(s): GSC 115 plus one additional course within the global supply chain management major, and permission of instructor.

GSC 445 Supply Chain Strategy and Design 3 Credits

This course introduces the student to the concepts and techniques necessary to design and operate global supply chains. It covers some of the strategic issues of managing a global supply chain and emphasizes the importance of understanding the organization, its value chain, industry, competitors, suppliers, and customers in a global framework. The course covers various strategies as well as different supply chain design models and approaches for efficient and effective supply chain operation.

Prerequisite(s): GSC 235 and GSC 355.

GSC 490 GSC Independent Research and Study 3 Credits

Topics to be approved by instructor, program director, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation.

Prerequisite(s): GSC 115 and permission of instructor.

GSC 491 GSC Internship 3 Credits

The Global Supply Chain Management (GSCM) Program formally sponsors an internship in global supply chain management. The intention of the course is to supplement theoretical foundations and other material introduced in the classroom with an opportunity to work in a sponsoring organization. Through the internship experience, the student will get a chance to see how supply chains are managed and will get a chance to apply supply chain concepts for themselves. If used in place of the co-op, internship credits will count toward GSCM major requirements, but can also be used as a business or free elective.

Prerequisite(s): GSC 115 plus one additional course within the GSCM major, and permission of instructor.

Health Administration

Program Overview

The **health administration minor** recognizes the diversity of skills required in the health-care sector, and allows students from a variety of majors to minor in health care administration. Majors particularly well-suited to health administration are:

- **Sciences** (biology, chemistry, biochemistry, biopsychology, psychology)
- **Social sciences** (economics, sociology, social work, political science)
- **Business** (marketing, management, business administration, human resources management, business economics, finance, management sciences and information systems).

Classes include a diversity of student majors, which allows science, social science and business students to interact and learn alternative points of view. The health administration minor, combined with other

initiatives of the integrated science and business curriculum at Rider, place graduates at a strong advantage in the employment marketplace.

Courses and Descriptions

BHP 309 Honors Seminar: Genetic Engineering and the Philosophy of Science 3 Credits

Highlights the different perspectives held by scientists and philosophers regarding current bioethical issues. Topics include classical ethical theory, applied ethics, and basic biology as it relates to topics such as stem cells, cloning, and assisted reproduction. Students will learn how to construct and present rational, objective arguments during class discussions and presentations. At the end of this course, students will have gained a strong perspective both the ethical and biological foundations behind modern "hot-button" topics in genetics.

BIO 100 Life Science: Human Emphasis 3 Credits

An examination of mammalian physiology and development at the cellular and organ system level, with emphasis on physiological homeostasis in man. Three hours of lecture per week.

BIO 101 Life Science: Genetics Emphasis 3 Credits

An examination of cell biology and genetics, with emphasis on the impact of these fields on human affairs. Three hours of lecture per week.

BIO 106 Life Science: Human Disease 3 Credits

An introduction to molecular, cellular, and human biology with emphasis upon diseases and disorders caused by mutation, bacteria, viruses, or parasites. The biology of human aging is also discussed. Three hours of lecture per week.

BIO 108 Life Sci: Biol of Human Aging 3 Credits

An introduction to the biology of aging manifest in the cells, tissues, and organs of animals and humans. Three hours of lecture per week.

BIO 110 Life Science: Inquiry Approach 4 Credits

An introductory course for non-science majors in which students develop an understanding of biological evolution, the molecular basis of heredity, the cell, matter, energy and organization in living systems, and the interdependence of organisms. In addition, students will develop an understanding of science as a human endeavor, the nature of scientific knowledge, and historical perspectives. Through investigative activities, students will develop an understanding about scientific inquiry and develop abilities necessary to do scientific inquiry. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 110L.

BIO 110L Life Sci: Inquiry Approach Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 110.

BIO 115 Principles of Biology I 4 Credits

An introductory biology course focusing on major themes of biology: what is life?; Cells as fundamental structure and functional unit of life; information transmission, storage and retrieval; Diversity and unity of life explained by evolution. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 115L.

BIO 115L Principles of Biology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 115.

BIO 206 The Pharmaceutical Industry 3 Credits

An introduction to drug discovery and development. Topics include how drugs are used to diagnose, cure, treat, and prevent disease and how drugs affect body function. The origins of diseases and the early attempts at treatment are also covered. Designed for business majors; does not satisfy requirements for the biology major.

Prerequisite(s): BIO 100 or BIO 101 or BIO 106 or BIO 108 or BNS 107 or CHE 115.

BIO 221 Human Anatomy & Physiology I 4 Credits

A comprehensive survey of the structure and function of musculo-skeletal systems, neuroendocrine systems and related tissues and cellular interactions. Physiological applications include homeostasis, muscle dynamics, and cell activities. Laboratory exercises complement lecture material through the use of animal dissections, wet labs, computer-assisted investigations, microscopy, and models. Exams, case histories, personal investigations, and lab practicums assess learning. Course emphasis supports allied health and pre-professional training. Three hours of lecture and one three-hour lab per week. Designed for allied health students; does not satisfy requirements for the biology major. Prerequisite(s): BIO 115.

Corequisite(s): BIO 221L.

BIO 221L Human Anatomy & Physiology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 221.

BNS 107 Life Science: Brain and Behavior 3 Credits

An introduction to the biology of the human brain and the rest of the human nervous system. Topics in neuroscience are covered in molecular, cellular, and systematic terms. Additional material is presented on the origins and effects of neurological and psychiatric diseases.

CHE 115 Chem and Contemporary Society 3 Credits

Designed to give the nonscientist an appreciation of the role of chemistry in today's world. The approach is conceptual rather than mathematical. Topics include basic principles of chemical theory, energy sources, elementary organic chemistry, drugs, food additives, polymers, chemistry of living systems, inorganic solids in modern technology, and problems involving pollution of the environment. Three hours of lecture per week. This course satisfies the core requirements for liberal arts, education and business majors.

CHE 118 Exploration of Chemical Prin 4 Credits

A one-semester introduction to the principles of chemical sciences. Students will utilize inquiry-based learning methods to examine contextual problems as a means to explore introductory models and concepts of chemistry. Students will also gain an understanding of how scientific models are used to explain experimental observations. The laboratory component of this course is designed to provide students with an experimental context within which to develop some of the models described in the classroom. Three hours of lecture and one three-hour lab per week.

CHE 118L Explor Chemical Prin Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 118.

CHE 120 Principles of Chemistry 3 Credits

For students who have successfully completed one year of high school chemistry. This systematic study of the fundamental principles and concepts of chemistry covers atomic structure, bonding, stoichiometric relationships, including solution and oxidation-reduction reactions, and molecular structure. Three hours of lecture per week. **Prerequisite(s):** High school chemistry or CHE 100 is recommended before taking this course.

Corequisite(s): CHE 121.

HTH 205 Introduction to Health Care 3 Credits

This course is an introduction to the components of the health care industry in the United States and to the interactions of these components in producing and supplying health care. We examine the nature of health, and the various institutions and personnel which seek to provide health services; we explore the means by which we pay for these services; we assess the relationship of technology to provision of health care services; we study the various ways that our government interacts with the providers of health care services; we investigate the ethical implications of issues in health care; and we explore health care sectors from an international perspective.

HTH 336 Economics of Health Care Sys 3 Credits

This course presents ways in which economic analysis can be used to explain issues in the health care industry. Microeconomics tools will be used to describe the behavior of consumers, producers, and third parties of the health care sector. The course also investigates the role of government in regulating the health care sector, and in providing services to the poor and elderly. Finally, we will use this foundation to examine some recent changes in this industry, and to analyze the most recent proposals for further changes.

HTH 450 Seminar in Health Research 3 Credits

Students in the course learn to conduct health administration-related research by engaging in an actual community-based research project. At the beginning of the semester, students are assigned to a health-related community-based organization. As a team, students meet with the client, devise a plan of action, collect and analyze data and other information, and write a report to the client. At the end of the semester, students present their findings to the client.

Prerequisite(s): Permission of instructor.

HTH 491 Health Administration Intern 3 Credits

This course provides students minoring in health administration an opportunity to supplement and apply their classroom work in a supervised employment setting with participating firms in the health care sector. Requirements include: a log of daily activities, oral and written reports to the faculty supervisor and a term paper. In addition, the employer will also submit an evaluation of the student's performance.

Prerequisite(s): HTH 205; junior or senior standing; and permission of faculty supervisor.

HTH 315 Healthcare Law,ethics & Policy 3 Credits

This course analyzes the role of the law in promoting the quality of health care, organizing the delivery of health care, assuring adequate access to health care, and protecting the rights of those who are provided care within the health care system. It will also examine the public policy, economic, and ethical issues raised by the health care system.

HTH 215 Population Healthcare Management 3 Credits

In this course, we study how disease is distributed in populations and of the factors that influence or determine this distribution. This course introduces the basic methods and tools epidemiologists use to study the origin and control of non-communicable and communicable diseases so that policies and mechanisms to enhance the health of populations can be developed.

Prerequisite(s): MSD 201 or MTH 120 or ENV 200 or PSY 201.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

PSY 220 Abnormal Psychology 3 Credits

The development of abnormal personalities is discussed, with a survey of the various types of mental abnormalities, including their symptoms, diagnoses, and treatments. Neuroses and psychoses are emphasized.

Prerequisite(s): PSY 100.

PSY 345 Health Psychology 3 Credits

This course focuses on the biopsychosocial model of health in which biological, psychological and social factors contribute to health and wellbeing, as well as illness and disease. After a brief introduction to systems of the body, i.e. nervous, endocrine, respiratory, cardiovascular, digestive, immune, this course will examine health enhancing behaviors such as exercise and nutrition, as well as health compromising behaviors such as drug abuse and other reckless behaviors, along with models that explain behavior maintenance and change. Additionally, attention is devoted to a discussion of how health psychology can function in shaping health care policy.

Prerequisite(s): PSY 100.

PSY 365 Drugs and Human Behavior 3 Credits

Presents the student with an in-depth analysis of the effects of alcohol and selected chemical substances on the behavior and body of the user. Commonly abused substances will be discussed in terms of their history, sources of production, routes of administration, distribution, metabolism and excretion, neurophysiology, tolerance, properties of addiction, withdrawal course and symptoms, and potential beneficial and harmful effects.

Prerequisite(s): PSY 100.

PSY 374 Psychology of the Family 3 Credits

This course examines the significance of family in human development. Using prominent themes of developmental psychology, such as: the role of attachment in forming human relationships, the significance of context in understanding human development, and the resilience of development; this course will explore the existing research on the family. Students are asked to consider their own experiences as members of a family, as well as to understand the varieties of ways family impacts development across the lifespan.

Prerequisite(s): PSY 100, PSY 230 or permission of instructor.

PSY 382 Aging, Brain, and Cognition 3 Credits

This course covers the biological structures and processes underlying cognition in humans and explores modulating factors such as age, sex, disease, stress, and environment. The theoretical and methodological issues of developmental cognitive neuroscience research are addressed. Focus of the course is on brain structure and function in the largest growing segment of our population, persons over the age of 65, and the link between structure and cognitive abilities, both intact and declining. Special attention is paid to those factors related to successful aging and treatments with putative cognitive enhancers.

Prerequisite(s): PSY 100.

Health Care Management

Program Overview

The B.S.B.A. in Health Care Management allows students to learn the business of health care – and prepare for a career in America's fastest growing sector. This program allows students to earn a well-rounded business degree from Rider's distinguished AACSB-accredited College of Business Administration, hone their business skills and focus on health care management studies, explore different roles in the complex issues facing health care and benefit from ongoing advice and support from professionally well-connected and experienced faculty.

Curriculum Overview

The curriculum provides a core education in business combined with critical topics in health care management. The program is designed to provide students with an understanding of both the business and health fields, including a deeper grasp of the legal, ethical, economic, social and managerial issues related to health care.

Faculty include professors with expertise in the economics, finance, information systems, law and marketing.

The course are designed to provide real world experiences and the program offers students the opportunity to learn through required participation in one of the following: a semester-long internship, large-data group project for a client and health care marketing courses where students design their own marketing plans.

Notes:

- Assumes no AP or other credits transferred into Rider University.
- Students are required to take 6 credits of International Business Electives.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts electives can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 200 Foundations of Leadership, LDP 220 Service Learning Through Minding Our Bus, LDP 398 The Co-op Experience Seminar, MGT 355 Team Management, or MGT 363 Management Skills.

Courses and Course Descriptions

BUS 315 Healthcare Law, Ethics & Policy 3 Credits

This course analyzes the role of the law in promoting the quality of health care, organizing the delivery of health care, assuring adequate access to health care, and protecting the rights of those who are provided care within the health care system. It will also examine the public policy, economic, and ethical issues raised by the health care system.

Prerequisite(s): 24 credits.

ECO 336 Economics of Health Care Sys 3 Credits

This course presents ways in which economic analysis can be used to explain issues in the health care industry. Microeconomic tools will be used to describe the behavior of consumers, producers, and third parties of the health care sector. The course also investigates the role of government in regulating the health care sector, and in providing services to the poor and elderly. Finally, we will use this foundation to examine some recent changes in this industry, and to analyze the most recent proposals for further changes.

Prerequisite(s): ECO 201 or HTH 205.

HTH 205 Introduction to Health Care 3 Credits

This course is an introduction to the components of the health care industry in the United States and to the interactions of these components in producing and supplying health care. We examine the nature of health, and the various institutions and personnel which seek to provide health services; we explore the means by which we pay for these services; we assess the relationship of technology to provision of health care services; we study the various ways that our government interacts with the providers of health care services; we investigate the ethical implications of issues in health care; and we explore health care sectors from an international perspective.

HTH 215 Population Healthcare Management 3 Credits

In this course, we study how disease is distributed in populations and of the factors that influence or determine this distribution. This course introduces the basic methods and tools epidemiologists use to study the origin and control of non-communicable and communicable diseases so that policies and mechanisms to enhance the health of populations can be developed.

Prerequisite(s): MSD 201 or MTH 120 or ENV 200 or PSY 201.

HTH 225 Health Care Financing 3 Credits

The goals of this course are: (1) to provide a description of how Americans pay for health care; (2) to explain how payment arrangements affect the healthcare system; and (3) to evaluate newly emerging arrangements. Specifically, we will focus on insurance (both public and private) in the United States, provider payment reform, the incentives of the parties in these arrangements and how these incentives impact cost containment in health care.

Prerequisite(s): HTH 205 and sophomore standing.

HTH 365 Health Care Information Systems 3 Credits

The Electronic Health Record (EHR) is one of the most complex technological projects ever undertaken. EHR involves the shared management, potentially on a global scale, of a variety of private, time-sensitive, multimedia data across activities including capture, processing, storage and access. The purpose of this course is to provide the future Health Administration professional with specifics of the socio-technical issues involved in this effort. The goals of this course are to study data standards used in modern EHR systems, technology platforms used to implement EHR in various types of organizations, data governance and regulations associated with health data, analytics that support quality of care and evidence-based practice.

Prerequisite(s): HTH 205; CIS 385 or GSC 385; HTH 215 or CIS 360; and junior standing.

HTH 491 Health Administration Intern 3 Credits

This course provides students minoring in health administration an opportunity to supplement and apply their classroom work in a supervised employment setting with participating firms in the health care sector. Requirements include: a log of daily activities, oral and written reports to the faculty supervisor and a term paper. In addition, the employer will also submit an evaluation of the student's performance.

Prerequisite(s): HTH 205; junior or senior standing; and permission of faculty supervisor.

MKT 380 Healthcare Marketing 3 Credits

The purpose of this course is to introduce students to the role, functions and tasks of healthcare marketing. Attention is devoted to applying basic marketing principles to the healthcare sector. Marketing decision making and analysis will be emphasized through the use of cases and current readings that focus on a variety of healthcare organizations, including hospitals, assisted living facilities, MCOs, and pharmaceutical companies.

Prerequisite(s): MKT 200 or permission of instructor.

ECO 450 Seminar in Economic Research 3 Credits

Students in the course learn to conduct economic research by engaging in an actual community-based research project. At the beginning of the semester, students are assigned to a community-based organization. As a team, students meet with the client, devise a plan of action, collect and analyze data and other information, and write a report to the client. At the end of the semester, students present their findings to the client. Students are permitted to take ECO 450 up to two times for credit.

Prerequisite(s): Permission of instructor.

ECO 490 Independent Research and Study 3 Credits

Topic to be approved by professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation.

Human Resource Management

Program Overview

Human Resource Management (HRM) professionals perform many vital business activities in organizations. As both private and public sector organizations have become more concerned about such issues as legal compliance and ensuring employee work behaviors are aligned with strategic objectives, the demand for well-trained HRM professionals has increased greatly.

Practitioners in HRM are involved in a variety of important, interesting, and challenging activities. They establish and implement policies that affect such organizational functions as recruitment, selection, training and development, performance management, compensation and benefits.

Curriculum Overview

Courses in the program include Introduction to Human Resource Management, Introduction to Labor Relations, Employee Selection and Training, Employee Compensation Systems, Employee Engagement, Managing Workforce Diversity, Career Management, Team Management, Management Skills, and more.

Total Credits 18

¹ Human Resource Management majors have the option of completing MGT 336 Career Management and waiving the professional development requirements of CBA 202 Career Plan & Perspect II and CBA 302 Career Planning & Perspectives III. If a student waives these two 1-credit courses, the student must complete 2 credits of free elective for graduation.

² Human Resource Management majors have the option of completing MGT 355 Team Management or MGT 363 Management Skills for their major requirements as well as for their Leadership Elective requirement. If a student chooses to count MGT 355 or MGT 363 toward both the major requirements and the Leadership Elective, the student must complete 3 credits of free elective for graduation.

An average of "C" or better is required in the 18 semester credit hours required of the human resource management major. Majors are encouraged to take HRM 492 Internship in Human Res Mgt as a free elective.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year, who change their major, or those who transfer to Rider will follow a different plan to ensure a timely graduation. ² Human Resource Management majors are required to take MGT 310 Intro to Human Resource Management plus 5 major electives. At least 3 of the 5 Major Course Electives must be from the following list: HRM 312, HRM 315, HRM 316, HRM 333, MGT 320.

³ Students are required to complete 6 credits of International Business Electives which can be fulfilled as major courses (MGT 375) or as free elective courses.

Notes:

- This accelerated plan assumes no AP or other credits were transferred into Rider University.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.
- Students are strongly suggested to complete a credit-bearing experiential course (e.g., internship, co-op, study tour, study abroad, ENT 448, ECO 450.)

Courses and Descriptions

HRM 312 Intro to Labor Relations 3 Credits

This course deals with the relationship of labor unions and management, the fundamentals of collective bargaining, and labor legislation. The structure and growth of unions as well as the relationships and problems that exist among private and public sector organizations, the labor force, and government are surveyed.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 313 Legal Aspects of Human Res Mgt 3 Credits

This course deals with the various laws that affect human resource management, including social insurance, legislation, minimum wage laws, OSHA, ERISA, as well as equal employment opportunity legislation. This course is concerned not only with the provisions of these laws, but also with their constitutionality, their effects, and how they are administered.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 315 Employee Selection & Training 3 Credits

This course explains the processes involved in selecting and training employees. With regards to selection, specific examples include, evaluating applicant credentials, administering pre-employment tests and complying with equal employment opportunity legislation. With regards to training, topics include assessing the need for training, designing effective training programs, utilizing methods such as technology to deliver training, and evaluating the effectiveness of training programs.

Prerequisite(s): MGT 310.

HRM 316 Employee Compensation Systems 3 Credits

The goal of this course is to familiarize you with the common methods of compensation used by today's organizations and how these methods could be used to increase motivation, job satisfaction, and performance in the workplace. To accomplish this, we will first discuss the bases of motivation in the workplace. Next, we will then talk about the various compensation options and techniques and the strengths and weaknesses of each in maximizing motivation and performance in an organization.

Prerequisite(s): MGT 310.

HRM 333 Employee Engagement 3 Credits

Employee Engagement is commonly described as a focused passion and enthusiasm that employees bring to their work that produces high-quality performance and positive organizational outcomes such as enhanced firm reputation, customer loyalty, and profitability. In this course, students will explore the concept and value of Employee Engagement, and strategies for energizing an organization's workforce. Projects and activities will focus on the role of the Human Resource function in measuring employee attitudes, designing relevant interventions, and influencing a culture of engagement.

Prerequisite(s): MGT 310.

HRM 441 Sel. Topics: Human Res Mgt 3 Credits

Deals with one area of study in the field of human resource management such as protective labor legislation, mediation and arbitration, the administration of labor unions, or case problems in human resource management. The topic varies each semester and is announced at the time of registration.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or HRM major elective.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 491 Internship 1-4 Credits

Provides the student with the opportunity to supplement and apply human resource management coursework in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing work experiences. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): Junior or Senior; Major in human resource management and MGT 310; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

HRM 492 Internship in Human Res Mgt 3 Credits

Provides the student with the opportunity to supplement and apply their human resource management classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions. 2.75 GPA overall and 3.0 GPA in the major is required.

Prerequisite(s): major in human resource management or management and leadership, and MGT 310; senior status; and permission of instructor.

Information Systems

Program Overview

Students with a major in information systems develop a solid understanding of the use, design, development, and management of information systems and information technology. Rider's information systems courses are designed to give students the opportunity to develop and manage a variety of projects that can be applied to real business settings immediately.

Increasingly, organizations that seek individuals with an information systems specialization expect excellent organizational, communication, interpersonal and analytical skills. All information systems students are encouraged to participate in a full semester co-op or summer internship experiences during their junior year.

Curriculum Overview

The required freshman-level information systems core course trains students to apply practical knowledge in their use of computer-based productivity tools. Core courses also allow students to develop an understanding of enterprise integration applications such as SAP R/3. The courses also explain the value of electronically integrating the major functional areas of an organization in order to facilitate more effective management decision-making.

Students gain an understanding of the enabling information technologies (IT) that organizations use to develop and sustain a strategic and competitive position in the marketplace. Students also learn about the benefits and drawbacks of adopting and using these information technologies.

Students with a major or a minor in information systems will be able to demonstrate their understanding of information technology by applying their technical knowledge and skills to provide a practical solution to a business problem, business need or business opportunity.

Students who satisfactorily complete a minimum of three courses with at least one-third SAP hands-on content in each course have the opportunity to earn the **SAP Student Recognition Award Certificate**. Click here (p. 83) to learn more about this certificate program.

Total Credits	12

¹ Permission of instructor required

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year, who change their major, or those who transfer to Rider will follow a different plan to ensure a timely graduation. Each student, with guidance from his or her advisor, will develop a personalized educational plan.

Course	Title	Semester Credit Hours
Year 1		
Fall Semester		
CIS 185	Information Systems Essentials ¹	3
CMP 120	Expository Writing ²	3
MSD 105	Quantitative Methods for Business ³	3
	Natural Science Elective	3
	Social Science Elective	3
Semester Credit Hours		15
Spring Semester		
CBA 102	Career Plan & Perspective I ⁴	1
	Humanities Elective	3
CMP 125	Research Writing	3
ECO 200	Principles of Macroeconomics	3
MKT 200	Marketing Principles	3

Free Elective		3
Free Elective		3
Semester Credit Hours		12

Total Credit Hours for Graduation 120

- ¹ CIS 185 can be taken in the Fall or Spring of year 1
- ² Students may be required to take CMP 115 Intro to Expository Writing based on placement. CMP 115 counts as a 3-credits Free Elective
- ³ Students may be required to take MSD 104 Intro to Quantitative Methods based on placement. MSD 104 counts as a 3-credit Free Elective.
- ⁴ Transfer Students can take MGT 336 Career Management (3 credits) as a substitute for the Career Planning sequence.

- Assumes no AP or other credits transferred into Rider University.
- Students are required to take 6 credits of International Business Electives which can be fulfilled as major courses or as free elective courses.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 398 Co-op Experience Seminar, LDP 200 Foundations of Leadership, LDP 220 Service Learning Through MOB, MGT 355 Team Management, or MGT 363 Management Skills.
- Students are strongly suggested to complete a credit-bearing experiential course (e.g., internship, co-op, study tour, study abroad, ENT 448 Seminar in Small Business Consulting, ECO 450 Seminar in Economic Research).

Courses and Descriptions

CIS 185 Information Systems Essentials 3 Credits

This course will enable students to use Microsoft Excel and Access to design and create complex applications to support effective decision making. Students will use Excel to design and create spreadsheets to support business analytics. Access will be used to understand, design, create, and utilize relational databases.

CIS 200 Web Application Development I 3 Credits

In the early 1990s, Tim Berners-Lee created a set of technologies to allow information sharing at the CERN particle accelerator in Europe. These technologies dramatically changed the face of computing and became what we know today as the Web. Understanding how to develop and manage applications for the Web is a requirement for the information system professional. Because of the ease of development, deployment, maintenance and general scalability of Web applications, this approach to building and managing applications has become the de facto standard for business application development. This class will examine Web application development in detail. Through a combination of lecture and labs, students will learn the architecture of Web applications, how to develop Web pages using HTML and CCS, how to control user interaction with those pages using the JavaScript programming language. The programming basics of variable declaration and usage, program flow of control, function declaration and calling, and object usage and declaration will also be shown. The use of the JQuery Javascript library to ease the development of Web pages will also be shown.

CIS 220 Web Application Development II 3 Credits

In the early 1990s, a set of network technologies was combined to create a platform for application development. These technologies are now referred to as the Web. Because of the ease of development, deployment, maintenance, and scalability of Web applications, this approach to building and managing applications has become the de facto standard for business application development. Understanding how to develop and manage applications for the Web is vital for information systems professionals. This class will examine Web application development in detail. Through a combination of lecture and labs, students will learn the architecture of Web applications, how to develop Web pages using the Hypertext Markup Language (HTML) and Cascading Style Sheets (CSS), and managing user interaction in those pages using the JavaScript programming language. The process of creating dynamic web pages using the PHP programming language on the Web server will also be taught.

Prerequisite(s): CIS 200.

CIS 255 Into to Game Design & Development 3 Credits

The basic concepts, logic, techniques, tools, and vocabulary associated with interactive, digital game and simulation development will be explored through a combination of lectures, discussions, and hands-on learning. Knowledge and skills derived can be applied to a wide variety of business and other organizational settings globally for interactive simulations, games, and education.

CIS 260 Business Graphics 3 Credits

Basic color theory, typography, and page/slide layout are presented. Students utilize presentation, word processing and photo editing applications to create and edit various documents through hands-on labs and projects.

Prerequisite(s): CIS 185 or permission of instructor.

CIS 270 Networking and Telecommunications 3 Credits

This course provides an introduction to business data communications and networking. The Internet and OSI models are discussed. Network technologies include local area networks, backbone, wide area networks, and the Internet. Introduction to network design, security, and network management are also provided.

Prerequisite(s): CIS 185.

CIS 300 Object-Oriented Programming 3 Credits

Students will learn the basic concepts of object-oriented programming as contrasted with traditionally structured programming and will develop applications using the Java programming language.

Prerequisite(s): CIS 200.

CIS 309 Data Structures & Cmptr Archit 3 Credits

An introduction to linked lists, stacks, queues, trees, pointers, and sorting and searching algorithms. Students will learn the technical details of data storage and manipulation along with the concepts of program execution, and will use tools such as hex-editors and debuggers.

Prerequisite(s): CIS 185 or permission of instructor.

CIS 315 Integrated Business with SAP 3 Credits

This course provides an introduction to enterprise resource planning (ERP) systems and addresses how integrated information systems improve business operations. Students will learn about functional business areas and business processes, and understand the problems inherent in un-integrated enterprise information systems. Using SAP software and case studies, students will learn how ERP systems are being used to facilitate integrated, real-time management decision making.

Prerequisite(s): CIS 185 and ACC 210.

CIS 319 Computer Forensics 3 Credits

Students will use computers to obtain and analyze evidence found on storage devices such as those confiscated under warrant, and learn how to trace digital activities. Criminal and investigative procedures will be explored in depth.

Prerequisite(s): CIS 185.

CIS 320 Cloud Computing Administration 3 Credits

Students will learn the process of creating or provisioning a cloud computing environment. Content will include the provisioning of operating system resources in a cloud environment, operating system installation, configuration and maintenance. Virtualization, the process of creating multiple operating system environments on a single piece of hardware will be covered in some detail. Troubleshooting problems in the virtualization environment and in the operating system environment will also be covered. Hands-on labs will be used throughout. Both Windows and Linux operating systems will be used.

Prerequisites: CIS 185.

CIS 325 User-Centered Design 3 Credits

This course introduces students to the design and evaluation of interactive and internet-based devices and systems, including methods to understand user needs and requirements, design and prototype alternative systems, and evaluate system usability. Topics include interaction design, human factors, requirement gathering techniques, protocol analysis, usability testing, and heuristics evaluation.

Prerequisite(s): Junior standing.

CIS 330 Database Management 3 Credits

This course involves the study of computer databases. Major topics include relational databases, use of the structured query language (SQL) to query relational databases, and design and maintenance of relational databases.

Prerequisite(s): CIS 185.

CIS 340 Electronic Commerce 3 Credits

Students will learn about the broad range of Internet business technologies; develop the skills necessary to create and administer successful electronic commerce projects; and understand the associated benefits, and risks of electronic commerce business models.

Prerequisite(s): CIS 185.

CIS 350 Practical Business Analytics with Excel 3 Credits

CIS 350 – Practical Business Analytics with Excel is a required course for the proposed Business Analytics minor. This course will provide the student with an opportunity to gain proficiency in analyzing and visualizing data using Excel. The learning experience includes not only classic tools, such as pivot tables and VLOOKUP, but also more advanced Excel data tools such as building Excel data models, creating data mash ups, and using the Power Pivot add-in. The course also requires students to complete a data analysis project along with a presentation about the business insights drawn from the data analysis results. The project requires students to understand the business problem, identify and apply the appropriate analytic and visualization tools, and communicate the insight in an intuitive and effective manner.

Prerequisite(s): CIS 185, MSD 200 & MSD 201.

CIS 360 Data Mining 3 Credits

This course deals with modern technologies for data analysis. Hands-on exercises for data retrieval, data visualization and predictive analytics will be carried out using up-to-date methodologies and software tools. The full data mining life cycle will be covered from recognizing business problems and opportunities amenable to data mining analysis through deploying and monitoring solutions.

Prerequisite(s): CIS 185.

CIS 370 Systems Analysis and Design Project 3 Credits

Topics include modeling techniques and methodologies to address the planning, analysis, design, and implementation of high quality systems, delivered on time and within budget. Using rapid application development tools, students will also construct an operational system within the span of a single semester. Issues and tools related to the management of project teams are also discussed.

Prerequisite(s): CIS 330.

CIS 375 Adv. Sem in Global Outsourcing 3 Credits

The course is aimed at generating a comprehensive understanding of the emergent domain of global business process outsourcing. Various referred to as knowledge process outsourcing, IT-enabled services outsourcing, and business services outsourcing, the industry has seen enormous growth over the last decade and continues to grow. India commands the single largest share of this market but South Africa, Eastern Europe, Philippines, Morocco and Egypt have all emerged as other contenders in this global sector. The course is divided into four modules: the political economy of global outsourcing, process modeling, outsourcing management, and industry analysis. Please note: Students will not receive credit for both CIS 375 and GSC 375.

Prerequisite(s): junior standing.

CIS 385 Management Information Systems 3 Credits

The course focuses on the management and use of information systems and technology for the strategic and operational advantage of the firm. Students explore the business value of information resources including current communication, database, as well as hardware and software technologies. GSC 385 can fulfill the CIS 385 requirement for all business majors. Please note: Students will not receive credit for both GSC 385 and CIS 385 without prior approval by the Dean's office.

Prerequisite(s): CIS 185 and junior or senior standing.

CIS 390 Project Management 3 Credits

This course introduces students to general project management, the process of organizing resources to achieve business goals. Topics include the identification, approval, analysis, and general management of complex business projects. Project management tools, reports, techniques, and approaches will be covered.

Prerequisite(s): CIS 185.

CIS 399 The Co-Operative Experience 6 Credits

The co-op program provides students with an opportunity to work full-time in a company and apply what they have learned in their computer information systems and other business classes. It also enhances students' employment opportunities since many employers use a co-op program as a first step before they hire full-time employees. Eligible students include junior computer information systems majors with a minimum overall GPA of 3.0, and a minimum GPA of 3.0 in any computer information systems coursework completed prior to submission of the co-op application. Three of the co-op credits can be applied toward the computer information systems major, and three credits can be applied toward business or free elective requirements. Grading is on a pass/fail basis.

Prerequisite(s): Completion of two of the three courses: CIS 200, CIS 270, and CIS330.

CIS 410 Selected Topics in Information Systems 3 Credits

Information and communication technologies are evolving rapidly and continually. The Special Topics course facilitates the exploration of a selected topic (or combination of topics) that represents a recent technological advance with important and direct implications in the field of computer information systems. Current research, readings, lectures, discussions and/or hands-on computer experience or other appropriate measures will be employed to stimulate student learning.

Prerequisite(s): to be determined by instructor.

CIS 420 Enterprise Security 3 Credits

This course introduces students to computer security. Coverage includes hardware, software, and network security issues. Through hands-on labs students will learn how computer systems can be comprised and how computer professionals can prevent and provide counterattacks for security intrusions.

Prerequisite(s): CIS 270 or permission of instructor.

CIS 430 Enterprise Integration 3 Credits

The major focus of this course includes the forces driving enterprise integration as well as the management decisions associated with the design and implementation of enterprise systems. Students will use SAP ERP extensively to configure, build, test, and implement an enterprise system for a real business environment from the ground up.

Prerequisite(s): CIS 315.

CIS 490 Independent Research and Study 1-4 Credits

Topic to be approved by professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation.

Prerequisite(s): permission of instructor.

CIS 491 Computer Information Systems Internship 3 Credits

This is an honors course that provides the student with approximately two months of supervised employment with participating companies. Students are given a variety of information technology experiences. They are required to complete a term paper and/or to make an oral presentation to the faculty. Grading is on a pass/fail basis.

Prerequisite(s): permission of instructor.

MSD 104 Intro to Quantitative Methods 3 Credits

The aim of this course is to give students the preparation in algebra needed for successful completion of other required courses in management sciences and the functional areas of business administration. Topics covered include linear and quadratic equations and functions, systems of linear equations, exponential functions, logarithms, linear inequalities, radicals, percent change, scientific notation and scientific digits.

MSD 105 Quantitative Methods for Business 3 Credits

The aim of this introductory course is to acquaint students with a number of basic mathematical techniques that will enhance their ability to become effective decision-makers in a realistic business environment. Topics covered include linear equations and inequalities, linear programming, summation notation, geometric series, counting techniques, event probability and discrete random variables. Where appropriate, these tools will be illustrated with examples chosen from business settings.

Prerequisite(s): MSD 104 or a passing grade on the Math Placement Exam.

MSD 110 Math for Actuarial Science I 3 Credits

The first of two courses designed to give the actuarial science student the necessary background in calculus. Topics include a brief review of a function, and introduces limits and continuity, the derivative and its applications, implicit differentiation, differentiating an inverse function, differentials, related rates, curve sketching, optimization problems, L'Hopital's rule, and an introduction to the indefinite integral. Fall.

MSD 111 Math for Actuarial Science II 3 Credits

A continuation of MSD 110. Topics include the definite integral and the fundamental theorem of calculus, change-of-variable theorems, the area between two graphs, integration by parts, improper integrals, infinite series, partial differentiation of a function of two variables and its optimization applications, and the double integral of a function of two variables.

MSD 200 Statistical Methods I 3 Credits

This course is designed to give the student an understanding of continuous random variables, the elements of statistical inference, and an introduction to how these tools may be useful in one's attempt to reach intelligent conclusions in real-world settings. The focus is on the normal random variable, descriptive statistics, sampling distributions, and the frameworks of estimation and hypothesis testing, particularly as they apply to inference for unknown population means and proportions in the one- and two-sample settings.

Prerequisite(s): MSD 105 or equivalent.

MSD 201 Statistical Methods II 3 Credits

The sequel to Statistical Methods I is designed to prepare the student to be able to recognize a variety of additional common inferential scenarios, select and apply appropriate techniques in their analyses, and be aware of the usefulness of computer packages in performing certain relatively complicated statistical calculations. The course covers the one-way analysis of variance, Chi-square tests for non parametric inferences, and regression analysis. Students are expected to submit, for evaluation, the analysis of a real-world data set.

Prerequisite(s): MSD 200.

MSD 320 Quantitative Methods for Business Forecasting 3 Credits

A study of the various quantitative techniques applicable to the problems of forecasting that occur in business and industry. Topics may include the regression techniques of causal modeling, as well as the moving average, exponential smoothing, and Box-Jenkins approaches of time series analysis. All methods are illustrated with the use of realistic forecasts.

Prerequisite(s): MSD 201 or MTH 341.

MSD 325 Regression/Analysis Variance 3 Credits

This course examines the use of applied linear statistical models to adequately describe practical relationships in business and economics. The implementation of a popular statistical computing package to analyze realistic data sets is an important component of the course. Topics include simple and multiple linear regression, model diagnostics and remedial measures, and the analysis of variance.

Prerequisite(s): MSD 201 or MTH 341.

MSD 340 Production and Operations 3 Credits

This course introduces the concepts and techniques of designing and managing manufacturing and service systems and their operations effectively and efficiently. Major topics include product and process design, facility location, forecasting, aggregate planning, inventory management, supply chain management, project management, just-in-time systems, quality assurance, linear programming, and the transportation problem. Current issues such as productivity, global competitiveness, and quality are also discussed.

Prerequisite(s): MSD 105 or MSD 110, MSD 200 or MTH 340, MSD 201 or MTH 341.

MSD 490 Independent Research and Study 3 Credits

Topic to be approved by professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation.

MSD 491 Summer Mgt Sciences Internship 3 Credits

An honors course that provides the student with approximately two months of supervised employment with participating companies. Students are given a variety of work experiences. They are required to complete a term paper and to make an oral presentation to the faculty. Grading is on a pass/fail basis.

Prerequisite(s): Permission of instructor.

International Business

Program Overview

The international business co-major is designed to enable students in the College of Business Administration to expand the breadth and depth of their knowledge by combining international business with another business major.

Concurrent business majors include accounting, advertising, business administration, information systems, economics, entrepreneurial studies, finance, global supply chain management, health care management, human resource management, management and leadership, marketing, sport management.

Curriculum Overview

Students in the international business co-major take four international business elective from a list including such courses as international advertising, international business law, independent study: global business, advanced seminar in global outsourcing, international trade and investment, comparative economic systems, international

entrepreneurship, international finance, international management and international marketing.

Students also take an experiential elective such as a global business internship, a global business study tour, independent study or a study abroad program.

Degree Offered

- B.S.B.A. in International Business

Investment Analysis

Program Overview

The Certificate in Investment Analysis Program is designed to prepare students for a variety of careers in investments and corporate finance. Participants receive in-depth training involving investment tools, valuation of assets, and management of investments that will position them to enter the fields of security analysis and portfolio management.

Even though the focus of the program is on investments, the knowledge that participants gain from the required courses is highly valued in other finance fields such as financial planning and treasury management.

This undergraduate certificate program is also designed to prepare students for the Chartered Financial Analyst (CFA) Level 1 Exam. The CFA designation is globally recognized by employers and investment professionals. The contents of the required courses for the certificate program, along with the other required courses for a business undergraduate degree, cover a significant portion of the CFA Level 1 Exam curriculum.

Curriculum Overview

The certificate program requires students to take the following five courses: Intermediate Corporate Finance; Investments; Fixed Income and Derivatives; Investment Analysis and Portfolio Management and Financial Analysis and Ethics.

The five required courses for the certificate program satisfy finance major requirements. Finance-Accounting double majors are not required to take Financial Analysis and Ethics.

To complete the program, students must have a minimum GPA of 3.4 for the six courses required by the program and minimum cumulative GPA of 3.25.

Degree Offered

- Certificate in Investment Analysis

Admission

Rider undergraduate students majoring in Finance may choose to apply for the certificate program if they meet the following requirements:

- minimum cumulative GPA of 3.25 after completing 60 credits
- minimum grade of "B" in at least five of the six prerequisite courses
- minimum grade of "C" in no more than one of the six prerequisite courses

Prerequisite Courses

ACC 210	Introduction to Accounting	3
ACC 220	Managerial Uses of Accounting	3
ECO 200	Principles of Macroeconomics	3
ECO 201	Principles of Microeconomics	3
MSD 200	Statistical Methods I	3
MSD 201	Statistical Methods II	3

Students must also achieve a minimum grade of "B" in FIN 220 Introduction to Finance, which is normally taken in the junior year. However, students interested in the certificate are strongly encouraged to take FIN 220 in the second semester of their sophomore year.

Requirements for the Certificate

(15 credits)

FIN 309	Intermediate Corporate Finance	3
FIN 312	Investments	3
FIN 360	Fixed Income and Derivatives	3
FIN 370	Financial Analysis and Ethics	3
FIN 412	Investment Analysis	3
Total Credits		15

¹ Students who are double majoring in Finance and Accounting are permitted to waive FIN 370 Financial Analysis and Ethics.

In order to successfully complete the certificate program, students must have a minimum GPA of 3.25 in the 15 semester hours of required coursework and a minimum cumulative GPA of 3.25.

Courses and Descriptions

FIN 309 Intermediate Corporate Finance 3 Credits

This course builds on and extends the concepts of financial management learned in FIN 220. The course examines long-term corporate financing and investment decisions and how those decisions interface with each other. Topics covered include: cost of capital, financial planning and analysis, capital budgeting, capital structure and dividend policy.

Prerequisite(s): FIN 220.

FIN 312 Investments 3 Credits

The fundamentals of investing in stocks, bonds, and other negotiable instruments are covered. Major topics include trading on securities markets, mutual funds, international investing, margin accounts, short sales, determinants of securities prices, and investment risks. Stock options, financial futures, convertible securities, and implications of taxes on investment decisions are also discussed.

Prerequisite(s): FIN 220.

FIN 360 Fixed Income and Derivatives 3 Credits

This course centers on the quantitative portion of the Chartered Financial Analyst (CFA) level 1 curriculum, which includes materials on fixed-income risk and return, fundamentals of risk analysis, derivative instruments and risk management applications of option strategies. The goal is to help students prepare for the exam, as well as introduce them to a variety of topics in finance.

Prerequisite(s): FIN 312.

FIN 370 Financial Analysis and Ethics 3 Credits

This course covers the topics of financial reporting and analysis and related ethical issues. The course would benefit students interested in augmenting their ability to understand, analyze and apply the information in financial statements. It provides essential knowledge for students seeking either the Certified Management Accountant (CMA) or Chartered Financial Analyst (CFA) certifications. Specifically, the course covers the Ethics and Professional Standards of the CFA curriculum, and materials on financial reporting quality and financial statement analysis. Course goals are to help students prepare for the certification exams, as well as introduce all interested students to a variety of topics in financial analysis and ethics.

Prerequisite(s): FIN 312 or POI.

FIN 412 Investment Analysis 3 Credits

Real-world application of the concepts and techniques of investment analysis and portfolio theory introduced in FIN 312. Students interact with and make recommendations to professional portfolio managers. Topics include analysis and forecasts of business conditions, market interest rates, international opportunities, and corporate profits. Emphasis is placed on the valuation of securities, stock selection, investment timing, technical analysis, and management of portfolio risk with options, futures, and other tools.

Prerequisite(s): FIN 312 or permission of instructor.

Leadership Development Program / Certificate in Leadership

Overview

The Leadership Development Program (LDP), housed within the Center for the Development of Leadership Skills, is a certificate bearing program that is open to undergraduate students of all majors at the University. The LDP is designed to create confident leaders by combining traditional academic learning with intensive skill training and supervised leadership experience through co-curricular activities, experiential learning, fieldwork, and community service.

The three components of the program (academic, experiential, and practical) apply knowledge and skills that are strengthened with “hands-on” participation in leadership and team environments. Through coaching and training, our students reinforce their leadership and interpersonal skills with team building, influence, and communication exercises throughout their time at Rider.

To become a member of the Leadership Development Program, interested undergraduate students must apply and be accepted. LDP members have from the time they are accepted to the time they graduate Rider to complete the requirements for the **Certificate in Leadership**, which is noted officially on each student’s transcript.

To learn more about the Leadership Development Program and apply for membership, please visit the Leadership Development Program

(<http://www.rider.edu/academics/colleges-schools/college-business-administration/centers-excellence/center-development-leadership-skills/leadership-development-program>) website.

Program Requirements

The Leadership Development Program at Rider is a University-wide program that is open to undergraduate students of all majors. Upon successful completion of the requirements listed below, students will obtain a Leadership Certificate upon graduation from Rider.

All LDP members must maintain at least a 2.5 cumulative grade point average. Applicants with a cumulative GPA of 2.5 or less will not be considered for membership into the LDP.

Academic Component

LDP 200	Foundations of Leadership ¹	3
One Ethics or Multicultural Studies elective ^{1, 2}		3

Experiential Component

Three Leadership Skills Seminars

Practical Component

Leadership Practicum³

Event/Meeting Requirements (per academic year in the program)

One career development workshop

One LDP-sponsored or endorsed program/workshop

One LDP general member meeting

¹ Grade earned must be a “B-” or better.

² For a list of courses which satisfy this requirement please see Ethics/Multicultural Courses (<http://www.rider.edu/academics/colleges-schools/college-business-administration/centers-excellence/center-development-leadership-skills/leadership-development-program/ethics-multicultural-courses>).

³ The Leadership Practicum consists of 200 supervised study units of actual leadership experience in clubs, organizations, internships, field work, community service, or other similar leadership activities.

LDP 200 Foundations of Leadership 3 Credits

This course provides students with a working model of leadership to guide their personal leadership development. It also exposes students to insights about leadership from respected commentators, scholars, and practitioners. Finally, it provides students with an opportunity to actively “do” leadership through experiential learning activities.

Management and Leadership

Program Overview

The manager’s job is fast-paced and requires the ability to make decisions and facilitate the work of others. The management and leadership major gives students the knowledge and skills they need to compete in a rapidly changing global marketplace. Firms of all sizes and in all fields need good managers who know how to motivate subordinates, manage teams, resolve conflicts, and lead by example.

Businesses want new employees who can handle themselves as subordinates, supervisors, and team members. Whether students are looking for a position with a medium to large organization or thinking of starting companies of their own, the management and leadership major provides the knowledge and skills they will need to be successful.

Curriculum Overview

Courses in the program include Team Management, Management Skills, Introduction to Human Resource Management, Managing Workforce Diversity, Career Management, Small Business Management, Negotiation, International Management, and more.

Degree Offered

- B.S.B.A. in Management & Leadership

¹ Management majors have the option of completing MGT 355 Team Management or MGT 363 Management Skills for their major requirements as well as for their Leadership Elective requirement. If a student chooses to count either MGT 355 or MGT 363 toward the Leadership Elective, the student must complete 3 credits of free elective for graduation.

² Management majors have the option of completing MGT 336 Career Management and waiving the professional development requirements of CBA 202 Career Plan & Perspect II and CBA 302 Career Plan & Perspect III. If a student waives these two 1-credit courses, the student must complete 2 credits of free elective for graduation.

An average grade of "C" or better is required in the 18 semester credit hours that are required for the management and leadership major. Majors are encouraged to take MGT 491 Internship as a free elective.

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year, who change their major, or those who transfer to Rider will follow a different plan to ensure a timely graduation. Each student, with guidance from his or her advisor, will develop a personalized educational plan.

¹ Students are required to complete 6 credits of International Business Electives which can be fulfilled as major courses (MGT 375 International Management) or as free elective courses.

² The Leadership Elective requirement is not listed because MGT 355 Team Management and MGT 363 Management Skills (required for the Management major) both satisfy the Leadership Elective requirement. An additional 3-credit free elective has been added.

Notes:

- This accelerated plan assumes no AP or other credits were transferred into Rider University.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.
- Students are strongly suggested to complete a credit-bearing experiential course (e.g., internship, co-op, study tour, study abroad, ENT 448, ECO 450.)

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored. **Prerequisite(s):** minimum 30 credits completed.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 320 Managing Workforce Diversity 3 Credits

Demographic shifts, changing patterns of labor force participation, global competition, and a growing cultural emphasis on the celebration of difference have all contributed to the creation of diversity as a hot topic in management. This course explores the opportunities and challenges of the increasingly diverse workforce emerging in the United States today. We will address the knowledge and skills managers must develop in working with others who are different from themselves. Some of these differences are obvious- gender, race, age, and physical characteristics. Other differences are not as easily observed - family structure, educational level, social class, and sexual orientation. This class incorporates experiential learning techniques for personal growth.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 336 Career Management 3 Credits

How careers are shaped by individual needs and experience and assisted by organization systems and practices is the focus of this course. The meaning of work and the development of careers are discussed, and students undertake self-assessment for the purpose of career planning. Careers are examined in the context of important changes occurring today in the world of work. The impact of the executive, organizational counselors and trainers, and the educational system upon the development of human potential is examined, along with the techniques for human resource planning and development.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 346 Negotiation 3 Credits

The purpose of this course is first, to explore the major concepts and theories behind effective negotiating practices and second, to develop negotiating skills applicable to a wide range of contexts. A knowledge of negotiation is a crucial requirement for anyone interested in a business career since it is a common mechanism for implementing change and for resolving conflict in the workplace. Topics will include two-party negotiations, power and politics, mediation, arbitration, and collective bargaining. A variety of teaching techniques will be used including readings, discussion, and role-playing.

Prerequisite(s): MGT 201 or permission of the instructor.

MGT 355 Team Management 3 Credits

This course prepares students to work in organizations that use teams as an integral part of their functioning-an increasingly common practice. The class involves intensive group interaction, focusing on individual growth in group settings. Working with other students in role-plays, exercises, and team assignments allows the student to develop better communication and leadership skills.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 363 Management Skills 3 Credits

The focus of this course is on specific skills necessary for success in a management role. These skills include leading, communicating effectively, delegating, conflict and time management and motivating others. Students will have opportunities to practice skills and to apply their knowledge to business cases.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 375 International Management 3 Credits

This course explores the ways in which culture impacts management practices and organizational behavior and dynamics. Topics include cross cultural communication, expatriate selection and training, leading and motivating cross cultural teams, developing organizational strategies to compete in a global market place, international business ethics, and current topics.

Prerequisite(s): MGT 201.

MGT 421 Sel Topics:Mgt & Organztn Behv 3 Credits

The seminar focuses on an area of study announced at the time of registration (students should check the registration material). Examples of possible topics are: leadership, motivation, and organizational behavior research. Prerequisites vary according to the topic and are listed in the registration material.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 448 Sem Small Bus Consul 3 Credits

This course utilizes student teams to assist existing small businesses in solving problems or researching opportunities. Students will spend the majority of time in the field utilizing an experiential learning approach. Weekly activity logs, proposal development, and project completion are required. Restricted to seniors.

Prerequisite(s): ENT 348 and permission of instructor.

MGT 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or MGT major elective.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 491 Intern Management/Org Behavior 3 Credits

Provides the student with the opportunity to supplement and apply their management and leadership classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): major in management and leadership or human resource management and MGT 363, or senior status; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

Management and Leadership/Human Resource Management Double Major

Program Overview

Rider's management and leadership major gives students the knowledge and skills they need to compete in a rapidly changing global marketplace. Whether students are looking for a position with a medium to large organization or thinking of starting companies of their own, the management and leadership major provides the knowledge and skills they will need to be successful.

Human Resource Management (HRM) professionals are vital to organizations. With private and public-sector organizations becoming more concerned with issues such as legal compliance, corporate culture and ensuring employee work behaviors are aligned with strategic objectives, the demand for well-trained HRM professionals is constantly growing. They establish and implement policies that affect

such organizational functions as recruitment, selection, training and development, performance management, compensation and benefits.

Curriculum Overview

Management and Leadership

Rider's management and leadership major opens the possibility of becoming a manager and leader in any industry or field. Businesses want their new employees to handle themselves as subordinates, supervisors and team members. Our management and leadership major provides hands-on training in these people skills. The major also provides students with a comprehensive understanding of management theories, so that students don't have to learn what works and what doesn't by trial-and-error on-the-job.

Human Resource Management

Human resource management professionals establish and implement policies that influence recruitment, selection, training and development of employees. They also work in areas of development, performance management, compensation, and benefits. HRM professionals may be involved with human resource planning, job design and developing and implementing strategy.

The department majors are valuable for students who want to pursue graduate studies in HRM, management, law and psychology. The majors may be taken alone, together or in combination with another major offered by the College of Business Administration.

¹ CIS 185 Information Systems Essentials can be taken in the Fall or Spring of Year 1.

² Students may be required to take CMP 115 Intro to Expository Writing based on placement. CMP 115 counts as a 3-credit Free Elective.

³ Students may be required to take MSD 104 Intro to Quantitative Methods based on placement. MSD 104 counts as a 3-credit Free Elective.

⁴ Transfer Students can take MGT 336 Career Management (3 credits) as a substitute for the Career Planning sequence.

⁵ Students are required to complete 6 credits of International Business Electives which can be fulfilled as major courses or as free electives.

HRM 312 Intro to Labor Relations 3 Credits

This course deals with the relationship of labor unions and management, the fundamentals of collective bargaining, and labor legislation. The structure and growth of unions as well as the relationships and problems that exist among private and public sector organizations, the labor force, and government are surveyed.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 313 Legal Aspects of Human Res Mgt 3 Credits

This course deals with the various laws that affect human resource management, including social insurance, legislation, minimum wage laws, OSHA, ERISA, as well as equal employment opportunity legislation. This course is concerned not only with the provisions of these laws, but also with their constitutionality, their effects, and how they are administered.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 315 Employee Selection & Training 3 Credits

This course explains the processes involved in selecting and training employees. With regards to selection, specific examples include, evaluating applicant credentials, administering pre-employment tests and complying with equal employment opportunity legislation. With regards to training, topics include assessing the need for training, designing effective training programs, utilizing methods such as technology to deliver training, and evaluating the effectiveness of training programs.

Prerequisite(s): MGT 310.

HRM 316 Employee Compensation Systems 3 Credits

The goal of this course is to familiarize you with the common methods of compensation used by today's organizations and how these methods could be used to increase motivation, job satisfaction, and performance in the workplace. To accomplish this, we will first discuss the bases of motivation in the workplace. Next, we will then talk about the various compensation options and techniques and the strengths and weaknesses of each in maximizing motivation and performance in an organization.

Prerequisite(s): MGT 310.

HRM 333 Employee Engagement 3 Credits

Employee Engagement is commonly described as a focused passion and enthusiasm that employees bring to their work that produces high-quality performance and positive organizational outcomes such as enhanced firm reputation, customer loyalty, and profitability. In this course, students will explore the concept and value of Employee Engagement, and strategies for energizing an organization's workforce. Projects and activities will focus on the role of the Human Resource function in measuring employee attitudes, designing relevant interventions, and influencing a culture of engagement.

Prerequisite(s): MGT 310.

HRM 441 Sel. Topics: Human Res Mgt 3 Credits

Deals with one area of study in the field of human resource management such as protective labor legislation, mediation and arbitration, the administration of labor unions, or case problems in human resource management. The topic varies each semester and is announced at the time of registration.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or HRM major elective.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 491 Internship 1-4 Credits

Provides the student with the opportunity to supplement and apply human resource management coursework in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing work experiences. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): Junior or Senior; Major in human resource management and MGT 310; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

HRM 492 Internship in Human Res Mgt 3 Credits

Provides the student with the opportunity to supplement and apply their human resource management classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions. 2.75 GPA overall and 3.0 GPA in the major is required.

Prerequisite(s): major in human resource management or management and leadership, and MGT 310; senior status; and permission of instructor.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 320 Managing Workforce Diversity 3 Credits

Demographic shifts, changing patterns of labor force participation, global competition, and a growing cultural emphasis on the celebration of difference have all contributed to the creation of diversity as a hot topic in management. This course explores the opportunities and challenges of the increasingly diverse workforce emerging in the United States today. We will address the knowledge and skills managers must develop in working with others who are different from themselves.

Some of these differences are obvious- gender, race, age, and physical characteristics. Other differences are not as easily observed - family structure, educational level, social class, and sexual orientation. This class incorporates experiential learning techniques for personal growth.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 336 Career Management 3 Credits

How careers are shaped by individual needs and experience and assisted by organization systems and practices is the focus of this course.

The meaning of work and the development of careers are discussed, and students undertake self-assessment for the purpose of career planning. Careers are examined in the context of important changes occurring today in the world of work. The impact of the executive, organizational counselors and trainers, and the educational system upon the development of human potential is examined, along with the techniques for human resource planning and development.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 346 Negotiation 3 Credits

The purpose of this course is first, to explore the major concepts and theories behind effective negotiating practices and second, to develop negotiating skills applicable to a wide range of contexts. A knowledge of negotiation is a crucial requirement for anyone interested in a business career since it is a common mechanism for implementing change and for resolving conflict in the workplace. Topics will include two-party negotiations, power and politics, mediation, arbitration, and collective bargaining. A variety of teaching techniques will be used including readings, discussion, and role-playing.

Prerequisite(s): MGT 201 or permission of the instructor.

MGT 355 Team Management 3 Credits

This course prepares students to work in organizations that use teams as an integral part of their functioning-an increasingly common practice. The class involves intensive group interaction, focusing on individual growth in group settings. Working with other students in role-plays, exercises, and team assignments allows the student to develop better communication and leadership skills.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 363 Management Skills 3 Credits

The focus of this course is on specific skills necessary for success in a management role. These skills include leading, communicating effectively, delegating, conflict and time management and motivating others. Students will have opportunities to practice skills and to apply their knowledge to business cases.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 375 International Management 3 Credits

This course explores the ways in which culture impacts management practices and organizational behavior and dynamics. Topics include cross cultural communication, expatriate selection and training, leading and motivating cross cultural teams, developing organizational strategies to compete in a global market place, international business ethics, and current topics.

Prerequisite(s): MGT 201.

MGT 421 Sel Topics:Mgt & Organztn Behv 3 Credits

The seminar focuses on an area of study announced at the time of registration (students should check the registration material). Examples of possible topics are: leadership, motivation, and organizational behavior research. Prerequisites vary according to the topic and are listed in the registration material.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 448 Sem Small Bus Consul 3 Credits

This course utilizes student teams to assist existing small businesses in solving problems or researching opportunities. Students will spend the majority of time in the field utilizing an experiential learning approach. Weekly activity logs, proposal development, and project completion are required. Restricted to seniors.

Prerequisite(s): ENT 348 and permission of instructor.

MGT 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or MGT major elective.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 491 Intern Management/Org Behavior 3 Credits

Provides the student with the opportunity to supplement and apply their management and leadership classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): major in management and leadership or human resource management and MGT 363, or senior status; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

Marketing

Program Overview

A degree in marketing provides students with the knowledge they need to compete in today's global marketplace. Graduates from the marketing program enter the workforce with a strong background in business, a critical understanding of consumer behavior, ad trends and the know-how needed to reach target audiences and to promote services and products.

Curriculum Overview

Students who major in marketing at Rider are prepared for a broad array of careers in such fields as sales, retailing, promotion, distribution, customer service, marketing research and others.

Possible employment opportunities can be found with profit and non-profit and public or private organizations marketing goods or services to consumers, businesses or other organizations.

Degree Offered

- B.S.B.A. in Marketing

- Assumes no AP or other credits transferred into Rider University.
- Students are required to take 6 credits of International Business Electives which can be fulfilled as major courses (MKT 330 or MKT 369) or as free elective courses.
- Business Honors students will have a different sequence.
- Global/Cultural Liberal Arts Elective can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.
- For the Leadership Elective, choose from LDP 398 Co-op Experience Seminar, LDP 200 Foundations of Leadership, LDP 220 Service

Learning Through MOB, MGT 355 Team Management, or MGT 363 Management Skills.

- Students are strongly suggested to complete a credit-bearing experiential course (e.g., internship, co-op, study tour, study abroad, ENT 448 Seminar in Small Business Consulting, ECO 450 Seminar in Economic Research.)

Courses and Descriptions

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MKT 205 Advertising Principles 3 Credits

Basic theory, functions, principles, and applications of advertising are the focus of this course. The relation of advertising to our economy, the advertising department and the ad agency, selection of media, advertising practices, and the use of research to improve advertising techniques are covered.

Prerequisite: MKT 200. Required for advertising majors.

MKT 250 Retailing Management 3 Credits

The principles underlying successful retailing are analyzed within the framework of the strategic-planning process. Topics covered include location, merchandise planning, customer service, image, atmosphere, layout, pricing, promotion, personnel and operations management.

Prerequisite(s): MKT 200.

MKT 260 Service Marketing 3 Credits

Focuses on the unique challenges of managing services and delivering quality service to customers. Emphasis is placed on the total organization, and how effective marketing and customer focus must be coordinated across multiple functions. The course is applicable to service organizations and to organizations that depend on service excellence for competitive advantage. Topics include customer-focused management, and customer satisfaction, retention, lifetime value and profitability. Students will learn to map services, understand customer expectations, and develop relationship marketing strategies.

Prerequisite(s): MKT 200.

MKT 280 Sports Marketing 3 Credits

The course focuses on the unique challenges of marketing sports at a variety of levels: youth, college, professional, and international. The challenges of attracting and retaining fans and participants as well as of building and maintaining strong brand identity are at the heart of the course content. By evaluating case studies and examining current issues in sports marketing, students will gain an understanding of what it means to be a professional marketer of a sports organization and/or event.

Prerequisite(s): MKT 200.

MKT 310 Business to Business Marketing 3 Credits

This course examines the business-to-business marketplace, and the planning and control tools used by its entities in managing the product, pricing, promotion, channel and supply chain management strategies.

Prerequisite(s): MKT 200.

MKT 320 Consumer Behavior 3 Credits

The nature and determinants of consumer behavior are studied, with attention given to the influence of socio-psychological factors such as personality, small groups, demographic variables, social class, and culture on the formation of consumer attitudes, consumption patterns, and purchasing behavior.

Prerequisite(s): MKT 200; Required for advertising majors.

MKT 330 International Marketing 3 Credits

This course examines the global marketplace and the complexities of its environmental influences, and necessary adaptations in formulating the strategies for product, pricing, promotion, channel and supply chain management.

Prerequisite(s): MKT 200.

MKT 340 Personal Selling 3 Credits

Examines persuasive techniques utilized in sales presentations conducted on a person-to-person basis. Major course emphasis is on developing effective selling techniques; understanding the company, its products and the role of the salesperson in implementing product/market strategies; understanding the customers and the selling environment; application of effective sales presentation techniques; recognizing selling opportunities and careers.

Prerequisite(s): MKT 200.

MKT 345 Customer Focus 3 Credits

Marketing supply chain management programs are concerned with the creation and delivery of value to customer and organizations. No longer simply the domain of the warehouse manager or logistics director, supply chain management is viewed by most companies as a mission-critical element. Marketing focuses on developing an understanding of customers and markets, creating products and services based on that understanding, and communicating and delivering the value added. This course will teach the student the essential role of marketing in all aspects of successful supply chain management - relationship management, technological and financial - and it will help the student understand the structure, functions, principles and methods employed in discovering and translating consumer needs and wants into product and service specifications and then transferring these goods and services from producers to consumers or end users.

Prerequisite(s): MKT 200 and GSC 115 or permission of instructor.

MKT 350 Retailing Management 3 Credits

The principles underlying successful retailing are analyzed within the framework of the strategic-planning process. Topics covered include location, merchandise planning, customer service, image, atmosphere, layout, pricing, promotion, personnel and operations management.

Prerequisite(s): MKT 200.

MKT 366 Marketing Research 3 Credits

Topics include specific research procedures in gathering, processing, analyzing, and presenting information relevant to marketing problems: advertising planning and effectiveness; product development; distribution channels; sales techniques; consumer behavior; and forecasting. Student learning about research planning, implementation, and interpretation is facilitated by the use of projects or cases.

Prerequisite(s): MKT 200; MSD 200, MSD 201; junior standing; Required for marketing and advertising majors.

MKT 369 International Advertising 3 Credits

This course introduces students to the general landscape of international advertising with emphasis on understanding the opportunities and challenges entailed in international advertising management. The course will cover the subject from three aspects, including the international advertising environment, the international advertising industry, and international advertising strategies.

Prerequisite: MKT 200 or permission of instructor.

MKT 370 Internet Marketing 3 Credits

This course emphasizes the discipline of internet marketing, including practices of leading online marketing companies, state of the art online research and demonstrates how the Internet is creating value for customers and profits for businesses while also fitting into a firm's complete marketing strategy. This course will provide a strategic and tactical toolkit for the online marketer, help students understand how and why the Internet is changing traditional marketing and allow students to develop the skills, strategies and tactics important to develop successful Internet marketing plans.

Prerequisite(s): MKT 200 and CIS 185.

MKT 375 Digital Advertising and Social Media 3 Credits

This course surveys the concepts, principles, practices and industry standards of digital advertising, including standard display and rich media advertising, search advertising, email advertising, game advertising, and mobile advertising. It also introduces the strategies and tactics in social media marketing. The course emphasizes a strategic, holistic view of digital advertising and social media as marketing communication tools that are situated in the marketing strategic framework and employed to engage consumers in community building.

Prerequisite(s): MKT 200.

MKT 380 Healthcare Marketing 3 Credits

The purpose of this course is to introduce students to the role, functions and tasks of healthcare marketing. Attention is devoted to applying basic marketing principles to the healthcare sector. Marketing decision making and analysis will be emphasized through the use of cases and current readings that focus on a variety of healthcare organizations, including hospitals, assisted living facilities, MCOs, and pharmaceutical companies.

Prerequisite(s): MKT 200 or permission of instructor.

MKT 440 Sales Management 3 Credits

By means of lectures, discussions, and case studies, the field of marketing management is analyzed from the viewpoint of sales executives. The responsibilities for planning and administering personal selling operations are emphasized. Considerable attention is given to other activities for which sales executives may be wholly or jointly responsible, such as decision making on promotion and brand management.

Prerequisite(s): MKT 200 and senior standing.

MKT 444 Spec. Topics Honors: Mkt & Law 3 Credits**MKT 460 Marketing Management Seminar 3 Credits**

This capstone course for marketing majors employs a top management approach to the overall marketing task, including planning, organizing, controlling, and integrating all the activities of the marketing program. Integration of marketing with other operations of the business unit is emphasized. Major problems and current trends are identified and analyzed through case discussion.

Prerequisite(s): Marketing major and 15 semester hours of marketing; Required for marketing majors.

MKT 469 Selected Topics in Marketing 3 Credits

The study of a topic (or combination of topics) that represents some dimension of marketing or has important and direct implications for marketing management. Theoretical foundations as well as special applications of marketing decision making may be explored. Readings, research, lectures, discussions, or other appropriate methods are employed to stimulate student learning.

Prerequisite(s): MKT 200 and senior standing or permission of instructor.

MKT 490 Independent Research and Study 1-4 Credits

Topic to be approved by the professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation, which may be counted as a business or free elective.

MKT 491 Internship-Based Indep Study 3 Credits

Provides the student an opportunity to supplement and apply classroom work in supervised employment with participating marketing and advertising firms. Requirements include a journal with a log of daily activities, and a project or term paper presented to and evaluated by the internship sponsor. Evaluation will also include a report by the company on the intern's performance. Credits may be used to satisfy business or free elective requirements.

Prerequisite(s): permission of instructor.

Organizational Psychology B.S.B.A.

Overview

Are you interested in knowing what motivates a person to perform well at a job, or what qualities a company needs to look for to make a great hire? Today's businesses and organizations need professionals who understand human behavior, group dynamics and how to make the workplace function better. A major in Organizational Psychology from Rider University will help prepare you for a career in one of America's fastest-growing professions.

Curriculum Overview

Rider University's program is one of just a handful in the nation offering a unique interdisciplinary major that combines business and psychology. This versatile degree can have a real impact on an organization's bottom line by helping to improve employee satisfaction and job performance.

Majors in this program will gain a comprehensive understanding of the important contributions that organizational psychology plays in today's workplace.

The Organizational Psychology program focuses on the behavioral aspects of managing and supervising the human resources of an organization or business. You will learn the key concepts of management and psychology, including perception and attitudes, employee motivation and engagement, and organizational leadership and power — and gain an in-depth understanding of what makes employees and organizations function at their best.

As an Organizational Psychology major, you will:

- Develop a comprehensive understanding of human behavior in work settings
- Learn how to enhance performance within an organization or business
- Benefit from networking and gain real-world experience through internships and other professional opportunities

The U.S. Bureau of Labor Statistics ranks Industrial-Organizational Psychology at the top of its list of 20-fastest growing occupations, with a projected growth rate of 53 percent between now and 2022. Organizational psychologists are in demand because their expertise results in better hires, increased productivity, reduced turnover and lower labor costs. They can work as consultants to organizations, or serve in-house in a variety of jobs, including:

- Human resource officer
- Employee development manager
- Organizational development director
- Quality performance manager
- Organizational psychologist
- Testing specialist
- Compensation and benefits specialist

PSY 100	Introduction to Psychology	3
PSY 105	Introduction to Research in Psychology	3
PSY 240	Social Psychology	3
PSY 329	Research Methods in Organizational Psychology	4

Choose two of the following courses:

HRM 315	Employee Selection & Training	3
HRM 316	Employee Compensation Systems	3
HRM 333	Employee Engagement	3
MGT 320	Managing Workforce Diversity	3
MGT 490	Independent Research and Study ¹	3

Choose two of the following courses:	6
PSY 215 Personality	
PSY 225 Learning and Memory	
PSY 315 Psychological Tests	
PSY 400 Senior Seminar	
PSY 490 Independent Research and Study ¹	
Total Credits	31

¹ Students may take either PSY 490 or MGT 490 to satisfy major requirements, but may not count both courses towards the major requirements.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

¹ CIS 185 Information Systems Essential can be taken in the Fall or Spring of Year 1.

² Students may be required to take CMP 115 Intro to Expository Writing based on placement. CMP 115 counts as a 3-credit Free Elective.

³ Students may be required to take MSD 104 Intro to Quantitative Methods based on placement. MSD 104 counts as a 3-credit Free Elective.

⁴ Transfer Students can take MGT 336 Career Management (3 credits) as a substitute for the Career Planning sequence.

⁵ **Students are required to complete 6 credits of International Business Electives which can be fulfilled as major courses or as free electives.**

⁶ Global/Cultural Liberal Arts Electives can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.

- Assumes no AP or other credits transferred into Rider University.
- Students are required to take 6 credits of International Business Electives.
- Business Honors students may have a different sequence.
- Global/Cultural Liberal Arts Electives can be satisfied by courses that are designated as global/cultural, including language courses at the 101-level or above.

ACC 210 Introduction to Accounting 3 Credits

This course provides an introduction to basic principles and methods of accounting essential to preparation, understanding and interpretation of financial statements. Topics include accounting for merchandising concerns, current assets, long-term assets, liabilities and equity accounts. A brief overview of internal control is also covered.

ACC 220 Managerial Uses of Accounting 3 Credits

This course provides an introduction to the use of accounting information in managerial decision-making. Topics include cost behavior, cost classifications, and problem-solving functions of accounting as they pertain to planning, control, evaluation of performance, special decisions, and budgeting. The interpretation of published financial statements and the statement of cash flow are also covered.

Prerequisite(s): ACC 210.

BUS 300 Social & Legal Environment Bus 3 Credits

The strategies by which organizations in the private as well as the public sectors interact with, adapt to, and attempt to influence their external environments are explored. The primary emphasis is on evaluating the effect of business and governmental decisions on the quality of life. The role of regulatory agencies and the impact of local and national legislation on organizational behavior are considered.

Prerequisite(s): 54 credits.

BUS 400 Strategic Mgmt and Policy 3 Credits

This capstone course for seniors in business administration provides a framework for problem identification, analysis, and decision making within the organization. Students are given the opportunity to integrate and apply previously acquired knowledge of accounting, decision sciences, economics, finance, marketing, management, and statistics. Case studies, critical incidents, and other appropriate techniques are utilized.

Prerequisite(s): 84 credits, CIS 185, ACC 210, ACC 220, MKT 200, MGT 201, FIN 300, MSD 340, BUS 300, CIS 485.

CBA 102 Career Plan & Perspective I 1 Credits

In this course students will explore their own history, goals and values as input to their definition of success. The course will set the stage for the remainder of students' college career, and will encourage them to draw connections among their career goals, educational performance, extra-curricular experiences, and available resources.

CBA 202 Career Plan & Perspect II 1 Credits

In this course, students will build on their CBA 102 self assessments to identify specific occupations that match who they are and where they want to go. The course will provide students with the understanding of the changed nature of the current work and career environment they will be entering when they graduate from Rider. They will acquire career management skills and apply these skills to develop short and long term career goals and plans for achieving them while at Rider. The course will also touch on the intersection of work and family roles.

Prerequisite(s): CBA 102.

CBA 302 Career Plan & Perspect III 1 Credits

This one credit course will be targeted to second semester sophomores and juniors. In this course, students will build on their CBA 102 and 202 self assessments to develop strategies for a successful job search. The course will provide students with an understanding of the changed nature of the current work and career environment they will be entering when they graduate from Rider. They will acquire career management and job search skills and apply these skills to developing, networks, identify job search resources and enhance resume and interview skills. Students will understand how to research potential employers and translate their experiences into a successful job search strategy.

Prerequisite(s): CBA 102 and CBA 202.

CIS 185 Information Systems Essentials 3 Credits

This course will enable students to use Microsoft Excel and Access to design and create complex applications to support effective decision making. Students will use Excel to design and create spreadsheets to support business analytics. Access will be used to understand, design, create, and utilize relational databases.

CIS 385 Management Information Systems 3 Credits

The course focuses on the management and use of information systems and technology for the strategic and operational advantage of the firm. Students explore the business value of information resources including current communication, database, as well as hardware and software technologies. GSC 385 can fulfill the CIS 385 requirement for all business majors. Please note: Students will not receive credit for both GSC 385 and CIS 385 without prior approval by the Dean's office.

Prerequisite(s): CIS 185 and junior or senior standing.

CMP 120 Expository Writing 3 Credits

Students will increase their competence in the critical reading of challenging college-level texts that engage significant ideas and in writing effective essays that advance a clear and meaningful thesis while demonstrating understanding of those texts. The second of the department's three-course composition sequence.

Prerequisite(s): Successfully completed CMP 115 or have attained a 530 or above on the writing section and 500 or above on the critical reading section of the SAT or a score of 4 or above on the English department placement test.

CMP 125 Research Writing 3 Credits

Introduces students to the process of library research and documented writing. Emphasis will be on the refinement of critical reading, thinking, and writing strategies applied to multiple sources and documented papers.

Prerequisite(s): CMP 120 or BHP 100.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

ECO 200 Principles of Macroeconomics 3 Credits

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 201 Principles of Microeconomics 3 Credits

Market price systems are analyzed. The nature and characteristics of consumer and producer behavior, the theory of pricing in competitive and noncompetitive markets, and determination of the distribution of output are re evaluated. Welfare, social control, monopoly, and income inequality are explored in the light of price theory. The role of the United States in the world economy is explored.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

HRM 315 Employee Selection & Training 3 Credits

This course explains the processes involved in selecting and training employees. With regards to selection, specific examples include, evaluating applicant credentials, administering pre-employment tests and complying with equal employment opportunity legislation. With regards to training, topics include assessing the need for training, designing effective training programs, utilizing methods such as technology to deliver training, and evaluating the effectiveness of training programs.

Prerequisite(s): MGT 310.

HRM 316 Employee Compensation Systems 3 Credits

The goal of this course is to familiarize you with the common methods of compensation used by today's organizations and how these methods could be used to increase motivation, job satisfaction, and performance in the workplace. To accomplish this, we will first discuss the bases of motivation in the workplace. Next, we will then talk about the various compensation options and techniques and the strengths and weaknesses of each in maximizing motivation and performance in an organization.

Prerequisite(s): MGT 310.

HRM 333 Employee Engagement 3 Credits

Employee Engagement is commonly described as a focused passion and enthusiasm that employees bring to their work that produces high-quality performance and positive organizational outcomes such as enhanced firm reputation, customer loyalty, and profitability. In this course, students will explore the concept and value of Employee Engagement, and strategies for energizing an organization's workforce. Projects and activities will focus on the role of the Human Resource function in measuring employee attitudes, designing relevant interventions, and influencing a culture of engagement.

Prerequisite(s): MGT 310.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 320 Managing Workforce Diversity 3 Credits

Demographic shifts, changing patterns of labor force participation, global competition, and a growing cultural emphasis on the celebration of difference have all contributed to the creation of diversity as a hot topic in management. This course explores the opportunities and challenges of the increasingly diverse workforce emerging in the United States today. We will address the knowledge and skills managers must develop in working with others who are different from themselves.

Some of these differences are obvious- gender, race, age, and physical characteristics. Other differences are not as easily observed - family structure, educational level, social class, and sexual orientation. This class incorporates experiential learning techniques for personal growth.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 355 Team Management 3 Credits

This course prepares students to work in organizations that use teams as an integral part of their functioning-an increasingly common practice. The class involves intensive group interaction, focusing on individual growth in group settings. Working with other students in role-plays, exercises, and team assignments allows the student to develop better communication and leadership skills.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or MGT major elective.

Prerequisite(s): MGT 201 or permission of instructor.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MSD 105 Quantitative Methods for Business 3 Credits

The aim of this introductory course is to acquaint students with a number of basic mathematical techniques that will enhance their ability to become effective decision-makers in a realistic business environment. Topics covered include linear equations and inequalities, linear programming, summation notation, geometric series, counting techniques, event probability and discrete random variables. Where appropriate, these tools will be illustrated with examples chosen from business settings.

Prerequisite(s): MSD 104 or a passing grade on the Math Placement Exam.

MSD 200 Statistical Methods I 3 Credits

This course is designed to give the student an understanding of continuous random variables, the elements of statistical inference, and an introduction to how these tools may be useful in one's attempt to reach intelligent conclusions in real-world settings. The focus is on the normal random variable, descriptive statistics, sampling distributions, and the frameworks of estimation and hypothesis testing, particularly as they apply to inference for unknown population means and proportions in the one- and two-sample settings.

Prerequisite(s): MSD 105 or equivalent.

MSD 201 Statistical Methods II 3 Credits

The sequel to Statistical Methods I is designed to prepare the student to be able to recognize a variety of additional common inferential scenarios, select and apply appropriate techniques in their analyses, and be aware of the usefulness of computer packages in performing certain relatively complicated statistical calculations. The course covers the one-way analysis of variance, Chi-square tests for non parametric inferences, and regression analysis. Students are expected to submit, for evaluation, the analysis of a real-world data set.

Prerequisite(s): MSD 200.

MSD 340 Production and Operations 3 Credits

This course introduces the concepts and techniques of designing and managing manufacturing and service systems and their operations effectively and efficiently. Major topics include product and process design, facility location, forecasting, aggregate planning, inventory management, supply chain management, project management, just-in-time systems, quality assurance, linear programming, and the transportation problem. Current issues such as productivity, global competitiveness, and quality are also discussed.

Prerequisite(s): MSD 105 or MSD 110, MSD 200 or MTH 340, MSD 201 or MTH 341.

PSY 100 Introduction to Psychology 3 Credits

An orientation to psychology, covering major facts, principles and concepts about human and animal behavior and experience, re-search findings, major problems, basic vocabulary, methodologies, and contributions in the field. Topics include psychology as a science; human development; individual differences; intelligence and its measurement; special aptitudes and interests; personality and social behavior; motivation and emotion; frustration and personality deviations; and learning, thinking, remembering and forgetting.

PSY 105 Introduction to Research in Psychology 3 Credits

Students will be introduced to the basic research methods used in psychology including, surveys, experiments and observation. Students will collect data and learn to describe this data using basic tools of analysis including graphic display and statistical analysis. Students will read original psychological research and learn to write using the conventions of the American Psychological Association.

Prerequisite(s): a grade of "C" in PSY 100.

PSY 215 Personality 3 Credits

A synthesis of the most recent research in the field of personality development. Topics include interplay of biological, cultural, and subjective personal processes; analysis of the broad trends in personality theories; and introduction to personality measurement.

Prerequisite(s): PSY 100.

PSY 225 Learning and Memory 3 Credits

A broad coverage of the expanding fields of learning, memory, and cognition is provided, while addressing their relevance and impact on human behavior. Continuity between early associationistic and contemporary cognitive theories is established. Topics range from basic conditioning to the more complex processes of memory, concept learning, thinking, and problem solving. **Prerequisite(s):** PSY 100.

PSY 240 Social Psychology 3 Credits

Deals with the scientific study of human beings in social situations, focusing on reciprocal influence of the individual and the group, especially aspects of behavior that are socially determined. The nature of attitudes: their development and change; the nature of social influence; interpersonal perception and attraction; dynamics of social behavior; and social phenomena, such as prejudice and social movements, are covered.

Prerequisite(s): PSY 100.

PSY 315 Psychological Tests 3 Credits

Examines the history of psychological testing. Issues concerning the construction of psychological tests are discussed, including concepts concerning reliability, validity, and item analysis. The rationale and structure of the major tests of intelligence, aptitude, and personality are reviewed, including the Rorschach, WAIS, TAT, MMPI, and Bender-Gestalt. In the last section of the course, students are given hands-on experience in the administration, scoring, and interpretation of a standard test battery.

Prerequisite(s): any statistics course.

PSY 329 Research Methods in Organizational Psychology 4 Credits

This course covers general area of research methods such as experimental and non-experimental methods, measurement, statistics, and preparation of reports for presentation and publication. In addition, research topics common in the area of organizational psychology such as worker motivation, job satisfaction, stress and burnout, communications in the workplace, productivity, decision-making, leadership style, and organizational structure will also be discussed. Students gain hands-on experience conducting empirical research.

PSY 400 Senior Seminar 3 Credits

This capstone course will provide a synthesis and evaluation of important critical issues in psychology, such as the role of modern psychology in solving social problems, the scientific vs. human services perspectives on behavior, emotion and cognition; and the nature of mental illness and well-being. Students will be expected to draw broadly from their education in psychology; to grapple with conflicting points of view; and produce professional quality writing, oral or multimedia presentations.

SAP Student Recognition Award Certificate

Program Overview

As a member of the SAP University Alliances program, Rider's College of Business Administration offers the *SAP Student Recognition Award* certificate to students who satisfactorily complete a minimum of three courses with at least one-third SAP hands-on content in each course. Students who earn the award will demonstrate the depth and breadth of their knowledge using state-of-the-art software, developing valuable skills relevant to their careers and chosen fields.

SAP is the global leader in enterprise application software, with more than 170,000 customers in more than 120 countries. They provide enterprise resource planning (ERP), business intelligence (BI) and related applications and services that enable companies of all sizes and in more than 25 industries. Global demand for certified SAP professionals increases every year. Hit the ground running at companies using SAP software!

SAP Student Recognition Award Certificate Requirements

Students who complete three of the following SAP integrated IS courses with a grade of "C" or better are eligible to receive the SAP Recognition Award Certificate. (Students who plan to take any of these courses specifically to obtain the certificate should check with the instructor to ensure the required SAP content will be covered that semester.)

Choose three of the following:

CIS 315	Integrated Business with SAP
CIS 360	Data Mining
GSC 385	Management Information Systems for Global Supply Chain Management
CIS 430	Enterprise Integration
Total Credits	9

Courses and Descriptions

CIS 315 Integrated Business with SAP 3 Credits

This course provides an introduction to enterprise resource planning (ERP) systems and addresses how integrated information systems improve business operations. Students will learn about functional business areas and business processes, and understand the problems inherent in un-integrated enterprise information systems. Using SAP software and case studies, students will learn how ERP systems are being used to facilitate integrated, real-time management decision making.

Prerequisite(s): CIS 185 and ACC 210.

CIS 360 Data Mining 3 Credits

This course deals with modern technologies for data analysis. Hands-on exercises for data retrieval, data visualization and predictive analytics will be carried out using up-to-date methodologies and software tools. The full data mining life cycle will be covered from recognizing business problems and opportunities amenable to data mining analysis through deploying and monitoring solutions.

Prerequisite(s): CIS 185.

GSC 385 Management Information Systems for Global Supply Chain Management 3 Credits

The purpose of this junior level management information systems course is to prepare students for today's dynamic business environment by increasing their understanding of IT-enabled global information processing and management. This course has a specific emphasis on the impact and effective utilization of information systems and technology for the global supply chain. Students will gain a solid understanding of the value of business process integration through a combination of conceptual learning, business process analysis, and collaborative decision-making. This will be facilitated through hands-on experience with SAP ERP and analytical software as well as Microsoft Excel. GSC 385 is required for the Global Supply Chain Management major and can fulfill the CIS 385 requirement for all business majors. Please note: Students will not receive credit for both GSC 385 and CIS 385 without prior approval by the Dean's office.

Prerequisite(s): CIS 185 and junior standing.

CIS 430 Enterprise Integration 3 Credits

The major focus of this course includes the forces driving enterprise integration as well as the management decisions associated with the design and implementation of enterprise systems. Students will use SAP ERP extensively to configure, build, test, and implement an enterprise system for a real business environment from the ground up.

Prerequisite(s): CIS 315.

Sales Minor

Program Overview

The Sales Minor is complementary to a wide range of majors in that it prepares students to effectively and persuasively represent an organization's offerings in negotiation and exchange situations. The employment outlook for sales positions is positive in a variety of industries such as manufacturing, wholesale, insurance, real estate and financial services. The core of the minor establishes a solid base of concepts and skills in sales and negotiation while elective courses allow students to focus on complementary knowledge areas and/or industries.

Minor Offered

Minor in Sales. The minor is available to both business and non-business majors.

Sport Management

Program Overview

The sport management co-major prepares students for a career in one of the world's biggest businesses: the fast-growing multi-billion dollar sport industry. Students gain a competitive edge as they develop a working understanding of the critical role business plays in every facet of sports and sports-related organizations.

This dual major program leads to a Bachelor of Science in Business Administration (B.S.B.A.) degree with two majors, sport management and a second major offered by one of the five departments in the College of Business Administration.

Curriculum Overview

The sport management co-major is designed to give students a broad-based business education by combining it with another discipline offered by Rider's College of Business Administration. This unique pairing provides students a deeper understanding of the legal, ethical, economic, social and managerial issues related sports.

The business-based curriculum prepares students for diverse career opportunities in professional sport organizations, college and high school athletic administration, sport governing bodies, event and facility management, marketing firms, media organizations and entrepreneurial ventures.

Required Courses

SPT 250	Introduction to the Business of Sports	3
SPT 450	Contemporary Issues in Sport Management	3

Select four of the following, including at least three from List A 12

List A:

ECO 326	Economics of Sports
ENT 210	Sports Entrepreneurship
MKT 280	Sports Marketing
SPT 355/or LAW 355	Sports and the Law
SPT 320	Global Business of Sports
SPT 325	Financial Management in the Sport Industry

List B:

AMS 211	Sports in American Life
BUS 491	Business Admin Internship ¹
CBA 315	International Business Tour
COM 347	Sports Media Relations
GND 333	Gender and Sport
PSY 283	Sport Psychology

Total Credits 18

¹ The internship (BUS) 491 must be in a sports organization and be approved by the Director of the Business of Sports Program. Examples include sports teams, sports arenas and stadiums, college sports programs, sports leagues, sports agencies and sports media organizations.

For graduation students must achieve an overall GPA of 2.0 or better in the major, with no course grade less than "C-" in any of the six courses required for the major.

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

¹ CIS 185 Information Systems Essentials can be taken in the Fall or Spring of Year 1.

² Students may be required to take CMP 115 Intro to Expository Writing based on placement. CMP 115 counts as a 3 credit Free Elective.

³ Students may be required to take MSD 104 Intro to Quantitative Methods based on placement. MSD 104 counts as a 3 credit Free Elective.

⁴ Transfer students can take MGT 336 Career Management (3 credits) as a substitute for the Career Planning sequence.

⁵ Students are required to complete 6 credits of International Business which can be fulfilled as major courses or as Free Electives.

Courses and Descriptions

AMS 211 Sports in American Life 3 Credits

Literary, sociological, and psychological views of sports in 20th-century American life are examined, focusing on sports as a symbol and reflection of our ideals and tensions.

BUS 491 Business Admin Internship 1-4 Credits

SPT 320 Global Business of Sports 3 Credits

The course explores the diverse challenges and issues facing the managers of sports enterprises in the context of the global marketplace. Issues of governance, cross-cultural interactions and business activities will be examined as they relate to modern sport at the international level. By evaluating case studies and examining current issues in the field, students will gain an understanding of the relationships and responsibilities associated with being a business professional in the global sport industry.

SPT 325 Financial Management in the Sport Industry 3 Credits

This course is designed to build upon earlier knowledge from courses in economics, accounting and finance that emphasizes the sports industry and the challenge for financial managers in areas such as stadium/arena financing, financial analysis and valuation. Business models and their financial implications for media and sports related enterprises as well as the business of college athletics will also be covered.

CBA 315 International Business Tour 3 Credits

Provides students with the opportunity to observe various international business environments outside of the United States. Students should gain a better appreciation of how culture, history, and politics influence organizational dynamics, business functions, and business customs.

Prerequisite(s): Junior or senior standing and permission of instructor.

COM 347 Sports Media Relations 3 Credits

Critically examines the symbiotic relationship between the mass media and professional sports franchises and major college athletic programs. This course deals with the workings and processes behind executing the proper techniques of sports information and media relations, as well as an analysis of the culture of sports in modern society. Students will develop a practical focus on sports information and promotion, including the role of the sports information director and events promoter, with emphasis on advanced concepts of public relations, publicity and marketing.

Prerequisite(s): COM 240 or permission of instructor.

ECO 326 Economics of Sports 3 Credits

The overall objective of this course is to deepen student understanding of microeconomic principles by applying microeconomic concepts to the analysis of professional and amateur sports. This course will utilize concepts from many different microeconomic specialties, (primarily Industrial Organization, Labor Economics and Public Finance). The tools from these different microeconomic fields will be used to explain and analyze the operation of professional sports teams and leagues in the U.S. with an emphasis on baseball, football, basketball and hockey. International comparisons will be made between professional sports in the U.S. and the rest of the world. The course will also analyze the not-for-profit sports sector, focusing on college sports and the National Collegiate Athletic Association.

Prerequisite(s): ECO 201.

ENT 210 Sports Entrepreneurship 3 Credits

Sports Entrepreneurship will introduce students to entrepreneurship in the sports industries as they explore opportunities and challenges for new ventures in this sector. Using an industry's business model, students will identify competitive advantages and understand what is required for startup success.

MKT 280 Sports Marketing 3 Credits

The course focuses on the unique challenges of marketing sports at a variety of levels: youth, college, professional, and international. The challenges of attracting and retaining fans and participants as well as of building and maintaining strong brand identity are at the heart of the course content. By evaluating case studies and examining current issues in sports marketing, students will gain an understanding of what it means to be a professional marketer of a sports organization and/or event.

Prerequisite(s): MKT 200.

PSY 283 Sport Psychology 3 Credits

This survey course will focus on the social and psychological factors related to performance and participation in sport and exercise, health, and injury/rehabilitation settings. Two general questions will be explored: (a) how do social and psychological variables influence performance and participation in physical activity pursuits? And (b) how does physical activity participation affect the psychological well-being of the individual? To better understand these questions, this course will overview theoretical and methodological approaches to a variety of sport and exercise psychology topics, including: socialization, motivation, group processes, competition, and performance enhancement.

Prerequisite(s): PSY 100.

Sport Studies

Program Overview

The sport studies minor is an interdisciplinary program available to all Rider students. The curriculum has been designed to provide students with courses relevant to the examination of the multi-dimensional world of sports and to appreciate the important role of sports in shaping culture.

Departments and programs from across the University have developed courses for this program enabling students to study and critically evaluate the social, political, ethical, legal, economic and media related issues in sports.

Curriculum Overview

The curriculum gives students the opportunity to use the expertise and perspectives from their major to pursue in-depth study of sports

related issues. On campus coursework is complemented by hands on internships, experiential learning through international sports related travel courses and presentations from guest speakers employed in a variety of roles in the sports industry. The experiential component of the minor also helps to give students a greater understanding of sports related employment possibilities as well as preparation for graduate work in sports management and administration programs.

Courses and Descriptions

AMS 211 Sports in American Life 3 Credits

Literary, sociological, and psychological views of sports in 20th-century American life are examined, focusing on sports as a symbol and reflection of our ideals and tensions.

COM 347 Sports Media Relations 3 Credits

CCritically examines the symbiotic relationship between the mass media and professional sports franchises and major college athletic programs. This course deals with the workings and processes behind executing the proper techniques of sports information and media relations, as well as an analysis of the culture of sports in modern society. Students will develop a practical focus on sports information and promotion, including the role of the sports information director and events promoter, with emphasis on advanced concepts of public relations, publicity and marketing.

Prerequisite(s): COM 240 or permission of instructor.

SPT 250 Introduction to the Business of Sports 3 Credits

This course is designed to introduce the student to the business of sports. Business principles, such as management, marketing, law, finance and economics will be applied to the business of sports. The course will also explore the various career opportunities in the world of sports.

SPT 320 Global Business of Sports 3 Credits

The course explores the diverse challenges and issues facing the managers of sports enterprises in the context of the global marketplace. Issues of governance, cross-cultural interactions and business activities will be examined as they relate to modern sport at the international level. By evaluating case studies and examining current issues in the field, students will gain an understanding of the relationships and responsibilities associated with being a business professional in the global sport industry.

SPT 355 Sports and the Law 3 Credits

Examines the legal, ethical, economic, social and managerial issues related to sports. Topics include liability issues, contracts, employment discrimination, antitrust law, and constitutional law. This course is cross-listed as LAW 355. Students may not get credit for both SPT 355 and LAW 355.

SPT 450 Contemporary Issues in Sport Management 3 Credits

This course will address the theory, development, and application of analytics in sports. Analytics refers to the use of data and quantitative methods to measure performance and make decisions. Students will learn about the application of analytics in sports for purposes of strategy, player performance, team management, sports operations, and fantasy competitions. The class will consist of lectures, discussions, and guest speakers from the sports industry. Students will work on projects related to the use of analytics in the various professional sports leagues and college sports.

Prerequisite: SPT 250, senior standing, and completion of 15 credit hours in business of sports coursework or permission of instructor.

ECO 326 Economics of Sports 3 Credits

The overall objective of this course is to deepen student understanding of microeconomic principles by applying microeconomic concepts to the analysis of professional and amateur sports. This course will utilize concepts from many different microeconomic specialties, (primarily Industrial Organization, Labor Economics and Public Finance). The tools from these different microeconomic fields will be used to explain and analyze the operation of professional sports teams and leagues in the U.S. with an emphasis on baseball, football, basketball and hockey. International comparisons will be made between professional sports in the U.S. and the rest of the world. The course will also analyze the not-for-profit sports sector, focusing on college sports and the National Collegiate Athletic Association.

Prerequisite(s): ECO 201.

ENT 210 Sports Entrepreneurship 3 Credits

Sports Entrepreneurship will introduce students to entrepreneurship in the sports industries as they explore opportunities and challenges for new ventures in this sector. Using an industry's business model, students will identify competitive advantages and understand what is required for startup success.

GND 333 Gender and Sport 3 Credits

Typical thoughts of sport include ticket prices, player salaries, team rosters, and league standings; rarely is it viewed from a gender perspective. This course will go beyond the examination of Title IX to better understand the relationship between masculinity, femininity and sports. This course will examine various aspects of gender and sport, including media and gender representation, race and ethnicity, drugs and violence, men and masculinities, sexualities, policy and politics, the feminist critique of sport, the initiation rites and hazing in college sports, sports wagering, and the internationalization of sport, including but not limited to the Olympics and Paralympics.

MKT 280 Sports Marketing 3 Credits

The course focuses on the unique challenges of marketing sports at a variety of levels: youth, college, professional, and international. The challenges of attracting and retaining fans and participants as well as of building and maintaining strong brand identity are at the heart of the course content. By evaluating case studies and examining current issues in sports marketing, students will gain an understanding of what it means to be a professional marketer of a sports organization and/or event.

Prerequisite(s): MKT 200.

PSY 283 Sport Psychology 3 Credits

This survey course will focus on the social and psychological factors related to performance and participation in sport and exercise, health, and injury rehabilitation settings. Two general questions will be explored: (a) how do social and psychological variables influence performance and participation in physical activity pursuits? And (b) how does physical activity participation affect the psychological well-being of the individual? To better understand these questions, this course will overview theoretical and methodological approaches to a variety of sport and exercise psychology topics, including: socialization, motivation, group processes, competition, and performance enhancement.

Prerequisite(s): PSY 100.

BUS 491 Business Admin Internship 1-4 Credits**CBA 315 International Business Tour 3 Credits**

Provides students with the opportunity to observe various international business environments outside of the United States. Students should gain a better appreciation of how culture, history, and politics influence organizational dynamics, business functions, and business customs.

Prerequisite(s): Junior or senior standing and permission of instructor.

Core Requirements

- Basic Core of Knowledge (p. 89)
- Business Subjects (p. 90)
- International Business Requirement (p. 90)
- Non-business Subjects (p. 90)
- Free Electives (p. 92)

Basic Core of Knowledge

Students in the College of Business Administration (CBA) are required to take a core of business courses designed to provide them with a solid foundation in business. These basic requirements are:

- A background of the concepts, processes, and institutions in the production and marketing of goods and/or services, and the financing of the business enterprises or other forms of organization. This portion is covered in such courses as Marketing Principles, Introduction to Finance, and Production and Operations;
- A background of the economic and legal environment as it pertains to profit or nonprofit organizations, along with ethical considerations and social and political influences as they affect such organizations. Courses that satisfy this requirement are Principles of Macroeconomics, Principles of Microeconomics, the Social and Legal Environment of Business, as well as several elective courses;
- A basic understanding of the concepts and applications of accounting, quantitative methods, and management information systems, including computer applications. This area is covered through such courses as Introduction to Accounting, Managerial Uses of Accounting, Statistical Methods I and II, Information Systems Essentials, and Management Information Systems;
- A study of organization theory, and behavior and interpersonal communications. Course work in Fundamentals of Management and Organizational Behavior covers this area, as well as courses in composition and speech;
- A study of decision processes under conditions of uncertainty, including integrating analysis and policy determination at the overall management level. The course, Strategic Management and Policy that serves as the capstone course, provides the necessary coverage in this area;
- An understanding of international business necessary to engage effectively in the global economy. This area is covered by two required international business electives;
- A study of professional development and career management focused on individual career goals and strategies for a successful job search. Coursework in Career Planning and Perspectives I, Career Planning and Perspectives II, and Career Planning and Perspectives III covers this area; and

- A study of leadership and interpersonal skills reinforced with participation in a team environment. This area is covered by a required leadership elective.

In addition to these courses, all students in the CBA are required to complete a program of study prescribed by the major or program in which they are enrolled. This phase of study typically begins in the junior year. The courses in the major are designed to provide the student with a general competence in one of the principal areas of business.

At least nine semester hours of credit in the area of a student's major must be taken at Rider, except in the accounting area that requires 12 semester hours.

Students are required to have 54 semester hours completed before enrolling in most 300- or 400-level business courses.

Fifty percent of all business credits must be taken through Rider. Transfer students can bring in 30 credits in business plus Quantitative Methods, Statistical Methods I and II, Macroeconomics, and Microeconomics. All business students must have a 2.0 GPA in their major and overall to graduate.

Business Subjects

Business Core

ACC 210	Introduction to Accounting	3
ACC 220	Managerial Uses of Accounting	3
ECO 200	Principles of Macroeconomics	3

Total Credits	33

Free Electives

(27 credits)¹

The minimum requirements in business and non-business subjects normally leave a student with an additional 27¹ credits that must be completed to satisfy the 120 required for graduation.

Free elective hours may be taken in any department at Rider, provided the student meets the requirements imposed by the department or program offering the course.

Free elective hours can be used to fulfill the International Business Elective requirements. Courses from a second major or a minor may also be used to fill the free elective hours.

Footnotes

¹ Accounting, Advertising, Health Care Management, Information Systems and Global Supply Chain Management majors have a reduced number of free elective hours due to the additional major requirements.

Business Honors Program

Approximately 25 students who have applied for and have been accepted to Rider University's College of Business Administration will be invited to participate in the Business Honors Program. These students will be chosen based on their SAT scores and high school GPA's. An additional ten students will be chosen after the end of the fall semester based on GPA.

The selected students will take the following sequence of honors courses beginning in the fall of their freshman year:

Class Standing	Semester	Honors Courses
Freshman	Fall	Freshman Seminar, CIS 185, ECO 200 and CBA 110
	Spring	ECO 201 and MKT 200
Sophomore	Fall	ACC 210 and MGT 201
	Spring	FIN 220
Junior	Fall	BUS 300 and CIS 385
Senior		BUS 444, BUS 400 and Senior Honors Thesis

In order to successfully complete the honors program, a student will have to do the following:

- Complete eight of the eleven of the honors courses above (not including BUS 444), one of which must be BUS 400. Students that enter in the Fall of their sophomore year must complete six core honors courses.
- Complete a non-core CBA honors course (BUS 444).
- Complete an honors thesis.
- Have a minimum GPA of 3.4 in all honors courses.
- Have a minimum GPA of 3.4 overall.

Upon successful completion of the honors program, a student will receive a special honors designation on his/her transcript, an honors award, and special recognition at graduation.

Departments

The College of Business Administration consists of five departments:

- Accounting (<http://www.rider.edu/academics/colleges-schools/college-business-administration/undergraduate-programs/accounting>)
- Marketing, Advertising and Legal Studies (<http://www.rider.edu/marketing>)
- Finance (<http://www.rider.edu/finance>) and Economics (<http://www.rider.edu/academics/colleges-schools/college-business-administration/undergraduate-programs/economics>)
- Information Systems (<http://www.rider.edu/isystems>) and Supply Chain Management (<http://www.rider.edu/gscm>)
- Management (<http://www.rider.edu/mgtlead>)

Faculty

Edward Adams

Priority Adjunct Assistant Professor, Department of Finance and Economics
B.S. Rider University; MBA St. John's Univeristy

Mohammad Ahsanullah

Professor, Department of Information Systems and Supply Chain Management
B.S. Presidency College, Calcutta University, India; M.Sc. University of Calcutta, Calcutta, India; Ph.D. North Carolina State University

William J. Amadio

Associate Professor, Department of Information Systems and Supply Chain Management
B.S. Brooklyn College; M.S. Polytechnic Institute of Brooklyn; Ph.D. Polytechnic Institute of Brooklyn

Barry D. Ashmen

Assistant Professor, Department of Marketing, Advertising and Legal Studies
B.S. Rider University; M.A. Rider University; Ed.D. Temple University

Devon Baranek

Assistant Professor, Department of Accounting
B.S. Villanova University; MBA Baruch College; Ph.D. Baruch College

Jerome T. Bentley

Associate Professor, Department of Finance and Economics
B.A. St. Vincent College; Ph.D. University of Pittsburgh

Mark N. Burgess

Priority Adjunct Instructor, Department of Marketing, Advertising and Legal Studies
B.A. University of Pittsburgh; MBA Fairleigh Dickinson University

Anne Carroll

Associate Professor, Department of Finance and Economics
B.S. Miami University; M.A. University of Pennsylvania; Ph.D. University of Pennsylvania

Radharao Chaganti

Professor, Department of Management
B.A. Osmania University, India; M.A. Osmania University, India; PGDM Indian Institute of Management Calcutta; Ph.D. University at Buffalo, The State University of New York

Nandini Chandar

Associate Professor, Department of Accounting
B.Com. Osmania University, India; PGDM Indian Institute of Management Calcutta; Ph.D. Case Western Reserve University

Chih-Chieh (Jason) Chiu

Associate Professor, Department of Finance and Economics
B.Sc. University of Witwatersrand; MBA Columbia University; Ph.D. Baruch College

Ronald G. Cook

Professor, Department of Management
B.S.B.A. State University of New York at Oswego; MBA Syracuse University; Ph.D. Syracuse University

Hope Corman

Professor, Department of Finance and Economics
B.A. University of Illinois at Urbana–Champaign; Ph.D. The City University of New York

Quinn W. Cunningham

Assistant Professor, Department of Management
B.A. Randolph-Macon College; M.S. Virginia Commonwealth University; Ph.D. Drexel University

Susan M. Denbo

Professor, Department of Marketing, Advertising and Legal Studies
B.S. Cornell University; J.D. Villanova University School of Law

Jie Joyce Ding

Associate Professor, Department of Information Systems and Supply Chain Management
B.S. Xi'an Jiaotong University, P.R. China; M.S. Xi'an Jiaotong University, P.R. China; Ph.D. The University of Texas at Austin

John J. Donovan

Associate Professor, Department of Management
B.A. University at Albany, State University of New York; Ph.D. University at Albany, State University of New York

Kathleen Dunne

Associate Professor, Department of Accounting
B.A. University at Buffalo, The State University of New York; M.S. State University College of Buffalo; Ph.D. Temple University

Lauren B. Eder

Professor, Department of Information Systems and Supply Chain Management
B.S. Boston University; MBA Drexel University; Ph.D. Drexel University

Zhihong Gao

Professor, Department of Marketing, Advertising and Legal Studies
B.A. Peking University; M.A. Wake Forest University; Ph.D. University of Illinois at Urbana–Champaign

Herbert E. Gishlick

Professor, Department of Finance and Economics

Assistant Professor, Department of Information Systems and Supply Chain Management
B.S. Fudan University, China; M.S. Case Western Reserve University; M.S. The University of Texas at Dallas; Ph.D. The University of Texas at Dallas

Cathleen Zucco-Teveloff

Priority Adjunct Lecturer, Department of Information Systems and Supply Chain Management
B.A. LeMoyne College; M.S. Syracuse University

Policies

Credit Hour Requirements

At least nine semester hours of credit in the area of a student's major must be taken at Rider, except in the accounting area which requires 12 semester hours.

Students are required to have 54 semester hours completed before enrolling in most 300- or 400-level business courses.

Fifty percent of all business credits must be taken through Rider. Transfer students can bring in 30 credits in business plus Quantitative Methods, Statistical Methods I and II, Macroeconomics and Microeconomics. All business students must have a 2.0 GPA's in their major and overall to graduate.

For all students, of the 120 semester hours of credit required for graduation, the last 30 must be taken at Rider.

Once a student has matriculated for a degree, credit for off-campus courses will be granted only with prior approval of the academic dean.

College of Continuing Studies

The College of Continuing Studies [CCS] recognizes that learning is a life long process and that part-time students need flexible learning opportunities. Students enroll in the College of Continuing Studies for a variety of reasons: to earn a degree, to develop their professional skills, learn more about our complex society, expand their personal lives, earn a certification, prepare for graduate study or prepare for a career change.

Students participating in CCS programs have diverse backgrounds and educational goals. Many enroll with high school backgrounds, while others bring college credits, undergraduate degrees or even graduate degrees. CCS students may take courses during the day, evening, and online.

Students pursuing a degree program (p. 96) may also have the opportunity to earn credits by nontraditional means, such as College Level Examination [CLEP], Advanced Placement, the American Council on Education, DSST, formal military credits, validation or assessment of a specific course or Prior Learning Assessment [PLA] based on demonstrated learning acquired through life and work experience.

Prospective students are welcome to make an appointment with a CCS academic advisor (<http://www.rider.edu/admissions/continuing-studies-admission/contact-advisor>) to discuss program goals and have a transcript credit evaluation.

Enrolled students may contact CCS at 609-896-5033 with any questions.

Majors, Minors and Certificates

Students enrolled in the College of Continuing Studies programs may attend day, evening or online courses.

The Bachelor of Science in Business Administration is conferred by the College of Business Administration. Within this degree program, students may choose from majors in Accounting, Advertising, Business Administration, Information Systems, Entrepreneurial Studies, Finance, Human Resource Management, Management and Leadership, and Marketing.

Nursing: Online RN to Bachelor of Science (B.S.N.)

Program Overview

Designed for working nurses, Rider's online R.N. to B.S.N. program lets students gain the skills and credentials to advance while balancing their career and family life.

The experience, skills and compassion an individual brings to his or her job transforms the lives of the patients in one's care every day. But rapid changes in today's health care environment now present nursing professionals with new challenges — and exciting opportunities. The online RN to B.S.N. program prepares students for these challenges while still training them to be compassionate care givers and partners.

The baccalaureate program at Rider University is accredited by the Commission on Collegiate Nursing Education (<http://www.aacn.nche.edu/ccne-accreditation>)

Curriculum Overview

The curriculum provides a seamless transition from the RN to B.S.N., building on the students' experiences as registered nurses. Courses are offered in an accelerated, seven-week format. Clinicals are embedded into the course material. Separate clinicals are not required.

Graduates of an Associate Degree program may transfer in 60-68 credits, depending on the credit distribution for that program. Students who graduate from a Diploma nursing program are granted 34 credits for prelicensure nursing courses, and any applicable liberal arts courses eligible for transfer are accepted.

Admissions Requirement

- An earned associate degree or Diploma in nursing from an accredited institution; students who do not meet this requirement should contact the program director before applying.
- Official transcripts from all institutions attended with a minimum 2.5 cumulative GPA
- Copies of a current/unrestricted RN license

Degree Offered

- B.S. in Nursing

NUR 408	Gerontological Nursing Concept	3
NUR 409	BSN Capstone Evidence - Based Microsystem Practice Change ¹	3

Free Electives ² 40-42

Total Credits 120

¹ The student designs the capstone project based on individual professional interests in consultation with the nursing faculty.

² Students who graduate from a Diploma nursing program are granted 34 credits for prelicensure nursing courses. These credits will appear as Free Electives.

A candidate for graduation must complete a minimum of 120 credits. A maximum of 30 credits outside the liberal arts and sciences may be presented for graduation.

NUR 400 Professionalism and Professional Values 3 Credits

Professionalism and the inherent values of altruism, autonomy, human dignity, integrity, and social justice are fundamental to nursing. This course provides a foundation of concepts of professionalism to facilitate participation and engagement in professional or community-based organizations that advocate for quality and access to health care. Learning activities and assignments will focus on strategies for self assessment and self reflection of one's values, moral integrity, and ability to act professionally at all times in complex health care delivery environments.

NUR 401 Organizational and Healthcare Systems Leadership 3 Credits

This course provides a foundation of principles of leadership based on contemporary needs for qualified nursing leaders who can function and manage in complex healthcare delivery environments. Learning activities and assignments will focus on strategies for self-assessment and self-reflection of one's own leadership skills, knowledge, and attitudes that foster and promote nursing leadership in diverse healthcare delivery settings, and strategies for best practice in nursing leadership in the 21st century.

NUR 402 Scholarship in Evidence-Based Practice 3 Credits

This course provides a foundation of evidence-based research principles to translate evidence into practice and how research informs professional nursing practice to improve patient safety and outcomes. Learning activities and assignments will focus on strategies for learning how to assess scientific merit of data-driven research, apply evidence-based practice in appropriate ways, monitor and evaluate the impact of evidence-based practice on informed nursing practice and outcomes of care as well as collaborate with interprofessional health care teams to improve patient safety and outcomes in a variety of healthcare delivery settings.

NUR 403 Information Management and Application of Patient Care Technology 3 Credits

This course provides a foundation of information management and application of patient care technology to enhance and improve patient safety and outcomes by examining linkages between information management systems and patient care technologies that support and are linked to safe nursing practice. The course examines how technology is used to inform nursing practice and enhance patient safety by applying safeguards and decision making support tools embedded in the technologies. Students are exposed to effective clinical information systems (CIS) to document nursing care, examine the ethical components of protecting patient information, challenges with data security, regulatory requirements, confidentiality and rights to privacy as well as examine the role of the professional nurse in updating and garnering information management resources and applying them in patient care settings.

48-50

NUR 404 Healthcare Policy, Finance, and Regulatory Environments 3 Credits

This course provides a foundation of U.S. healthcare policy, including financial and regulatory policies, as well as the nature and functioning of the U.S. healthcare delivery system. There is emphasis on policy processes at the organizational, local, state, national, and global levels. Learning activities and assignments focus on strategies for learning how to assess the role of the baccalaureate-prepared nurse in policy formation and reformation at all levels, demonstrating understanding of the political process at all levels, developing effective advocacy strategies for vulnerable populations, how to identify and influence key stakeholders in the policy process, the importance of effective communication of key healthcare issues, and how to influence change in the political process at all levels when there is social injustice.

NUR 405 Interprofessional Collaboration and Communication for Improving Healthcare Outcomes 3 Credits

This course provides a foundation of key concepts essential to promotion of effective interprofessional collaboration and communication for improving healthcare outcomes and patient safety. There is emphasis in the course on examination of the roles and perspectives of scope of practice for selected healthcare disciplines in intra-and interprofessional healthcare teams to improve healthcare outcomes and promote patient safety, and on effective strategies for advocacy and communication patterns in healthcare delivery settings as healthcare professionals develop trust and respect for all members of the healthcare team while recognizing unique differences and contributions of roles to patient safety and outcomes.

NUR 406 Population Health Promotion and Prevention Across the Lifespan 3 Credits

This course provides a foundation of key concepts essential to population-focused nursing, the aggregate, community or population as the unit of care. The focus of the course is on health promotion/disease prevention with emphasis on the professional nurse role in clinical prevention of disease and care of populations applying concepts of primary, secondary, and tertiary health promotion across the lifespan, identifying determinates of health, prioritizing primary prevention across the lifespan, actively identifying and targeting populations benefitting from evidence-based preventive initiatives and clinical preventive guidelines, assessment strategies for individuals and populations, applying evidence-based practice to health promotion/risk reduction, and being an advocate for vulnerable and disenfranchised populations without resources or a voice.

NUR 407 Cultural Diversity in a Global Society 3 Credits

This course provides a foundation of key concepts essential to nursing care and professional nursing leadership in assessment, planning, design, implementation, and evaluation of the knowledge, skills, and attitudes they must have as leaders of healthcare delivery focusing on improved system safety and effectiveness. There is particular emphasis on the nursing leadership role at the baccalaureate level for nursing to recognize, interrupt, evaluate, and correct healthcare errors and to implement safety principles and work with others to create a safe, caring environment for every healthcare delivery encounter as they provide care themselves, are acting in a leadership capacity, or are overseeing and delegating to other non-licensed assistive personnel. The course content focuses on identification, assessment, planning, design, and evaluation of evidence-based practice change to improve patient safety and outcomes.

NUR 408 Gerontological Nursing Concept 3 Credits

This course provides a foundation of key concepts essential to care of an aging population in a complex society. Given the diverse health status of the aging population, professional nurses must be able to develop competencies to provide high quality care to aging adults and their families or significant others. Specifically the course focuses on increased diversity and complexity of an aging society and selected health care needs, life transitions of aging adults, normal body system changes occurring with the aging process, the professional nurse role in principled care provided to a vulnerable population, and the role of the professional nurse as advocate and caregiver promoting the concepts of quality end-of-life care for aging adults, including pain and symptom management honoring the autonomy and self-wish of the aging client.

NUR 409 BSN Capstone Evidence - Based Microsystem Practice Change 3 Credits

This course provides a foundation for the baccalaureate nurse to have a solid understanding of the concepts of organizational and systems leadership, quality improvement, and safety that are essential to promoting high quality patient care impacting patient safety and outcomes. Professional nursing leadership skills are needed that emphasize ethical and critical decision-making, initiating and maintaining effective partnerships and working relationships, initiating and maintaining mutually respectful communication and collaboration skills within interprofessional healthcare teams, care coordination, delegation, and developing effective conflict resolution and consensus building strategies. Professional BSN nurses must be able to practice at the clinical microsystem level within ever changing, dynamic healthcare delivery settings and this course prepares the baccalaureate-prepared professional nurse with this knowledge, skills, and competencies to implement safety principles and work collaboratively with others on the interprofessional healthcare team to lead and participate in creating a safe, caring environment for healthcare delivery so every patient encounter is a safe, effective, and positive one through a 90-hour practicum in a selected healthcare organization.

Accounting (B.S.B.A)

Program Overview

Rider's accounting programs are designed to build professionals. The BSBA in accounting provides students with the skills and knowledge needed for careers with corporations, public accounting firms and governmental organizations.

Accounting majors learn in the classroom, during co-op and internship positions and through ongoing networking opportunities with accounting executives.

Curriculum Overview

The curriculum emphasizes technical knowledge, professional development, written and oral communication, information technology, ethics and global perspectives.

The BSBA program has an active co-op and internship program in which students work in paid positions during the semester or summer and earn academic credit for the program. Both the co-op and internship can be completed within the four year program and often lead to full-time employment. The BSBA also offers a business forensic concentration.

Students who want to pursue **CPA certification** can meet the 150 hour requirement for CPA licensure by double majoring in the BSBA program or

by continuing in the **4+1 Master of Accountancy (MAcc) program**. There is a CPA track in the MAcc program.

Undergraduate accounting majors are encouraged to work closely with their advisor to select courses which will best address their career and certification plans. Students should consult the specific certification requirements of the state jurisdiction in which they plan to become certified and plan accordingly. To learn more about individual state requirements for CPA licensure see www.nasba.org. (<https://nasba.org>)

Master of Accountancy (4 + 1 MAcc Program)

The 4 + 1 MAcc allows students to meet educational requirements for CPA licensure and, because there are four required courses, students can customize their MAcc to include an area of specialization as well as a CPA track. Students may enter the program directly from the BSBA program and, for students with overall and accounting GPA of 3.3, the GMAT requirement for admission is waived. The MAcc can be completed on either a full-time or part-time basis.

Accreditation Information

The accounting program is one of less than 4% of accounting programs worldwide to hold the prestigious AACSB business and accounting accreditation. The accounting faculty is committed to continuous improvement in curriculum, faculty and student preparation.

Degrees Offered

- B.S.B.A. in Accounting
- Master of Accountancy (fifth-year program)

Accounting (B.S.B.A.) Major Requirements

(24 credits)

Core Requirements

See Business Core Requirements (p. 89)

Major Requirements

ACC 302	Cost Management	3
ACC 310 & ACC 311	Acct Theory & Concepts I and Acct Theory & Concepts II	6
ACC 320	Accounting Info Systems	3
ACC 400	Principles of Auditing	3
ACC 405	Acct Problems & Practice	3
ACC 406	Integrative Professional Capstone ¹	3
ACC 410	Fund of Federal Taxation	3
Free Electives		21
Total Credits		120

Students who are accepted into the MAcc program after 90 credit hours may substitute a required graduate accounting course for ACC 406.

Students who do not take ACC 406 must take an additional free elective in order to meet the 120 required credits at the baccalaureate level.

Students who plan to take the CPA track in the MAcc must take MAcc 658, Governmental and Not-for-Profit Accounting in place of ACC 406; for these students, MAcc 658 may also be used to fulfill the 120 undergraduate credit requirement.

Students desiring to become certified public accountants (CPAs) will be required to have 120 credit hours of education to take the CPA exam and have completed 150 credit hours of education for licensure. Rider accounting majors may graduate after four years (120 credit hours) or seek to achieve the additional credit hours directly through admission to the Master of Accountancy (MAcc) program at the University. It is possible to apply to the MAcc program at Rider after completion of 90 credit hours. (Please consult the Rider University Graduate Academic Catalog for details on the MAcc program.) Undergraduate accounting majors are encouraged to work closely with their advisor to select courses that will best address their career and certification plans. Students should consult the specific certification requirements of the state jurisdiction in which they plan to become certified and plan accordingly.

Students majoring in accounting must receive a grade of at least "C-" in a prerequisite course for any advanced course in accounting, and must have a cumulative average of at least 2.0 in the major.

Courses and Descriptions

ACC 210 Introduction to Accounting 3 Credits

This course provides an introduction to basic principles and methods of accounting essential to preparation, understanding and interpretation of financial statements. Topics include accounting for merchandising concerns, current assets, long-term assets, liabilities and equity accounts. A brief overview of internal control is also covered.

ACC 220 Managerial Uses of Accounting 3 Credits

This course provides an introduction to the use of accounting information in managerial decision-making. Topics include cost behavior, cost classifications, and problem-solving functions of accounting as they pertain to planning, control, evaluation of performance, special decisions, and budgeting. The interpretation of published financial statements and the statement of cash flow are also covered.

Prerequisite(s): ACC 210.

ACC 302 Cost Management 3 Credits

This course focuses on firm strategy and the role managerial accounting information plays in the decision making process. Topics include the balanced scorecard, the value chain, product life cycles, target costing, theory of constraints, strategic pricing, management and control of quality cost systems, traditional and activity-based costing, cost control, standard costs and variances, and capital budgeting.

Prerequisite(s): ACC 220 and CIS 185.

ACC 310 Acct Theory & Concepts I 3 Credits

This is the first upper-level course in a sequence in financial accounting courses. Topics include the conceptual framework, and standard setting process followed by application and evaluation of generally accepted accounting principles including content, and structure of financial statements, present value concepts, current assets, current liabilities, property, plant, and equipment, intangible assets and non-current liabilities are studied. An overview of comparable international financial reporting standards (IFRS) is also included.

Prerequisite(s): ACC 210 and ACC 220.

ACC 311 Acct Theory & Concepts II 3 Credits

This course is a continuation of ACC 310. Topics include long-term investments, stockholders' equity, earnings per share, interperiod income tax allocation, accounting changes, revenue recognition, pensions, leases and cash flow analysis. An overview of comparable international financial reporting standards (IFRS) is also included.

Prerequisite(s): ACC 310.

ACC 320 Accounting Info Systems 3 Credits

This course provides an introduction to accounting information systems and enterprise-wide, process-focused information systems. Topics include quality of data for decision usefulness, internal control concepts and documentation tools, and database theory and applications.

Prerequisite(s): ACC 310.

ACC 321 Internal Auditing 3 Credits

This course provides an introduction to the internal audit profession, including understanding the nature and activities associated with the internal audit process. Topics include: international auditing standards, risk assessment including internal control system evaluation, business processes, and the relationship of management and employee fraud to the internal audit process.

Prerequisite(s): ACC 220.

ACC 325 Fraud Examination and Business Forensics 3 Credits

This course is designed to introduce students to the prevalence of fraud and fraudulent financial reporting in all forms of business, including the many methods used by employees and managers to perpetrate fraud. Topics will include: the motivation of individuals to commit fraud, various types of fraud schemes perpetrated in the workplace, as well as the various tools and techniques that are used to investigate, detect and prevent fraud.

Prerequisite(s): ACC 210.

ACC 335 Small Business Taxation 3 Credits

This course provides an understanding of the key tax issues faced by small businesses and their business implications. It also familiarizes prospective business owners with various tax filing requirements so that they can use the expertise of tax professionals more effectively.

Prerequisite(s): ACC 210.

ACC 399 The Co-Operative Experience 6 Credits

This course provides the student with a semester long supervised employment with participating companies. Students are evaluated periodically by senior staff members of the participating firms and required to complete a work journal, self-assessment and reflection paper. Eligible students include junior and senior accounting majors with a minimum GPA of 3.0 in accounting coursework. Co-op credits can be applied toward business or free elective requirements. Grading is on a pass/fail basis.

Prerequisite(s): ACC 210, ACC 220, and ACC 310 and permission of department chairperson.

ACC 400 Principles of Auditing 3 Credits

This course provides an introduction to financial statement audits performed by certified public accountants. Topics include corporate governance, the audit environment, professional standards, audit methodology, and audit report preparation. The course also provides an overview of other types of assurance and non-assurance services provided by CPA firms.

Prerequisite(s): ACC 302 and ACC 311.

ACC 405 Acct Problems & Practice 3 Credits

This course provides additional coverage of financial reporting issues and procedures. Topics include business combinations, consolidated financial statements, foreign currency translation, the effects of diversity across countries, disclosure and SEC reporting issues. Governmental and not-for-profit accounting standards are also covered.

Prerequisite(s): ACC 302 and ACC 311.

ACC 406 Integrative Professional Capstone 3 Credits

This course provides an integrative experience that applies financial statement and data analysis tools to a variety of accounting settings. Topics include issues of ethics and professionalism and linkages between accounting methods and company policy, equity valuation, bond ratings and other decision areas.

Prerequisite(s): ACC 405 or permission of department chairperson.

ACC 410 Fund of Federal Taxation 3 Credits

This course provides fundamental federal tax concepts applicable to individuals, partnerships, corporations, estates, and gifts. Topics are considered from a tax compliance and planning perspective. Preparation of individual and corporate tax returns is also included.

Prerequisite(s): ACC 311.

ACC 450 Business Forensic Application 3 Credits

This course is designed so that students to integrate various business disciplines to perform complex investigative cases and analyses, thus demonstrating mastery of the knowledge and skills required to be effective forensic professionals. The course covers how to manage and present digital and technical evidence gathered for forensic litigation cases, including the ability to be an expert witness in court.

Prerequisite(s): ACC 325 and ACC 321.

ACC 490 Independent Research and Study 3-4 Credits

Topic to be approved by professor and department chairperson. Available to juniors and seniors.

ACC 491 Accounting Internship 3 Credits

This honors course provides the student with approximately two months of supervised employment with participating companies. Students are evaluated periodically by senior staff members of the participating firms and are required to complete a term paper. Eligible students include junior and senior accounting majors with a minimum GPA of 3.0 in accounting coursework. Upon completion of course, a letter grade will be awarded.

Prerequisite(s): Permission of department chairperson.

Advertising (B.S.B.A.)

Program Overview

A degree in advertising gives students the opportunity to develop and enhance their creativity, visual, and writing skills to become competitive in today's global marketplace. Graduates from the advertising program enter the workforce with a strong background grounded in a critical understanding of consumer behavior, ad trends, and the know-how needed to reach target audiences and to promote services and products.

Curriculum Overview

An advertising major prepares students for careers in advertising agencies, large or small, or in the advertising or promotion departments of profit or nonprofit organizations. Possible entry-level positions include media buyer, copy writer, and assistant account executive. This program combines a solid background in the business disciplines with the study of communications. It emphasizes the role of advertising/promotions within the marketing communications strategy.

Degree Offered

- B.S. B.A. in Advertising

Note: a minor in web design (<http://catalog.rider.edu/undergraduate/colleges-schools/continuing-studies/bachelors-degree-programs/advertising/%20undergraduate/colleges-schools/liberal-arts-sciences/school-liberal-arts-sciences/majors-minors-certificates/web-design>) is required.

ADV 315	Media Planning and Strategy	3
MKT 366	Marketing Research	3
MKT 375	Digital Advertising and Social Media	3
ADV 435	Advertising Campaigns	3
Free Electives		24
Total Credits		120

¹ Advertising majors must take PSY 100 Introduction to Psychology as their required Social Science elective.

ADV 311 Advertising Copy and Layout 3 Credits

This course focuses on the development and planning of creative and strategic advertisements for a variety of products. The course includes creating concepts for ads, designing ads, and writing copy for all media. The student will become familiar with the activities and responsibilities of copywriters and art directors. The relationship between creative advertising and other functions of advertising will be emphasized.

Prerequisite(s): either ADV 200 or MKT 205 and COM 212. Required for advertising majors.

ADV 315 Media Planning and Strategy 3 Credits

This course focuses on the essential principles, measurements, procedures and problems encountered in determining appropriate media in which to place specific kinds of advertising messages designed to reach closely defined target audiences. The advantages and disadvantages of all media will be discussed from an advertising perspective. Specific audience and cost calculations and analyses will be used to develop comprehensive media plans.

Prerequisite(s): either ADV 200 or MKT 205. Required for advertising majors.

ADV 435 Advertising Campaigns 3 Credits

This capstone course for advertising majors provides an opportunity for students to plan comprehensive advertising campaigns. Coverage includes segmentation research, creative development of the campaign, media planning, and determining advertising effectiveness. Integration of advertising into the marketing program will be emphasized. Required for advertising majors.

Prerequisite(s): ADV 311, ADV 315; advertising major or minor, senior standing or permission of instructor.

ADV 490 Independent Research and Study 1-4 Credits

Topic to be approved by the professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation, which may be counted as a business or free elective.

ADV 491 Internship-Based Indep Study 3 Credits

Provides the student an opportunity to supplement and apply classroom work in supervised employment with participating marketing and advertising firms. Requirements include a journal with a log of daily activities, and a project or term paper presented to and evaluated by the internship sponsor. Evaluation will also include a report by the company on the intern's performance. Credits may be used to satisfy business or free elective requirements.

Prerequisite(s): Permission of instructor.

Allied Health Studies (B.S.)

Program Overview

Designed for working professionals in allied health fields, Rider's B.S. in Allied Health Studies program lets students gain the skills and credentials to advance — while balancing both their career and family life.

The experience, skills and compassion an individual brings to his or her job transforms the lives of the patients in one's care every day. But rapid changes in today's health care environment now present allied health professionals with new challenges — and exciting opportunities. The B.S. in Allied Health Studies program prepares students for these challenges while still training them to be compassionate caregivers and partners.

Curriculum Overview

The curriculum is designed to provide a seamless transition from an Associate degree or a diploma program, building on the students' experiences in allied health professions. Separate clinicals are not required.

Admissions Requirement

- Official transcripts from all institutions attended with a minimum 2.5 cumulative GPA
- Copies of a current/unrestricted license (in any allied health field)

Degree Offered

- B.S. in Allied Health Studies

Total Credits 120

¹ These courses may only be used to fulfill the requirements of a single category.

BIO 100 Life Science:Human Emphasis 3 Credits

An examination of mammalian physiology and development at the cellular and organ system level, with emphasis on physiological homeostasis in man. Three hours of lecture per week.

BIO 101 Life Science:Genetics Emphasis 3 Credits

An examination of cell biology and genetics, with emphasis on the impact of these fields on human affairs. Three hours of lecture per week.

BIO 106 Life Science: Human Disease 3 Credits

An introduction to molecular, cellular, and human biology with emphasis upon diseases and disorders caused by mutation, bacteria, viruses, or parasites. The biology of human aging is also discussed. Three hours of lecture per week.

BIO 108 Life Sci: Biol of Human Aging 3 Credits

An introduction to the biology of aging manifest in the cells, tissues, and organs of animals and humans. Three hours of lecture per week.

BIO 110 Life Science: Inquiry Approach 4 Credits

An introductory course for non-science majors in which students develop an understanding of biological evolution, the molecular basis of heredity, the cell, matter, energy and organization in living systems, and the interdependence of organisms. In addition, students will develop an understanding of science as a human endeavor, the nature of scientific knowledge, and historical perspectives. Through investigative activities, students will develop an understanding about scientific inquiry and develop abilities necessary to do scientific inquiry. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 110L.

BIO 110L Life Sci: Inquiry Approach Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 110.

BIO 115 Principles of Biology I 4 Credits

An introductory biology course focusing on major themes of biology: what is life?; Cells as fundamental structure and functional unit of life; information transmission, storage and retrieval; Diversity and unity of life explained by evolution. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 115L.

BIO 115L Principles of Biology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 115.

BIO 206 The Pharmaceutical Industry 3 Credits

An introduction to drug discovery and development. Topics include how drugs are used to diagnose, cure, treat, and prevent disease and how drugs affect body function. The origins of diseases and the early attempts at treatment are also covered. Designed for business majors; does not satisfy requirements for the biology major.

Prerequisite(s): BIO 100 or BIO 101 or BIO 106 or BIO 108 or BNS 107 or CHE 115.

BIO 221 Human Anatomy & Physiology I 4 Credits

A comprehensive survey of the structure and function of musculo-skeletal systems, neuroendocrine systems and related tissues and cellular interactions. Physiological applications include homeostasis, muscle dynamics, and cell activities. Laboratory exercises complement lecture material through the use of animal dissections, wet labs, computer-assisted investigations, microscopy, and models. Exams, case histories, personal investigations, and lab practicums assess learning. Course emphasis supports allied health and pre-professional training.

Three hours of lecture and one three-hour lab per week. Designed for allied health students; does not satisfy requirements for the biology major. **Prerequisite(s):** BIO 115.

Corequisite(s): BIO 221L.

BNS 107 Life Science: Brain and Behavior 3 Credits

An introduction to the biology of the human brain and the rest of the human nervous system. Topics in neuroscience are covered in molecular, cellular, and systematic terms. Additional material is presented on the origins and effects of neurological and psychiatric diseases.

BNS 275 Behavioral Neuroscience 4 Credits

An introductory behavioral neuroscience course including basic neuroanatomy and neurophysiology of movement, ingestive, reproductive, emotional, and learning behaviors. Emphasis is on the structure/function relationships that allow animals to make appropriate physiological and behavioral responses to the environment. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** BIO 115 & BIO 116.

Corequisite(s): BNS 275L.

BNS 275L Behavioral Neuroscience Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BNS 275.

CHE 115 Chem and Contemporary Society 3 Credits

Designed to give the nonscientist an appreciation of the role of chemistry in today's world. The approach is conceptual rather than mathematical. Topics include basic principles of chemical theory, energy sources, elementary organic chemistry, drugs, food additives, polymers, chemistry of living systems, inorganic solids in modern technology, and problems involving pollution of the environment. Three hours of lecture per week. This course satisfies the core requirements for liberal arts, education and business majors.

COM 254 Intro to Health Communication 3 Credits

Health communication has been shown to have a positive impact on a number of facets of the medical visit, including patient outcomes, patient satisfaction, and job performance and satisfaction. This course will provide students with tools to implement health communication practices in a healthcare setting in order to improve these areas. In addition, health communication is particularly useful in cross-cultural situations, both in regard to the patient-provider relationship, when the ethnicities of the two parties may be different, and when cultural beliefs may impact a patient's medical wishes. Part of the tools for implementing health communication into the practice setting includes an understanding of the role that culture can play in healthcare and the development of strategies to provide optimal medical care while also respecting cultural intricacies.

GLS 325 Global Perspectives Hlth & Illness 3 Credits

Explores the different international perspectives on health and illness. Themes include how men, women, and children in respective civilizations are treated and viewed within their communities or nations, as they become ill. Particular attention is given to the contrast between various types of traditional healing and Western medical practices, and their interactions. Discussions will also compare the usefulness of national versus international health agencies in dealing with global health problems.

HTH 205 Introduction to Health Care 3 Credits

This course is an introduction to the components of the health care industry in the United States and to the interactions of these components in producing and supplying health care. We examine the nature of health, and the various institutions and personnel which seek to provide health services; we explore the means by which we pay for these services; we assess the relationship of technology to provision of health care services; we study the various ways that our government interacts with the providers of health care services; we investigate the ethical implications of issues in health care; and we explore health care sectors from an international perspective.

HTH 215 Population Healthcare Management 3 Credits

In this course, we study how disease is distributed in populations and of the factors that influence or determine this distribution. This course introduces the basic methods and tools epidemiologists use to study the origin and control of non-communicable and communicable diseases so that policies and mechanisms to enhance the health of populations can be developed.

Prerequisite(s): MSD 201 or MTH 120 or ENV 200 or PSY 201.

HTH 315 Healthcare Law,ethics & Policy 3 Credits

This course analyzes the role of the law in promoting the quality of health care, organizing the delivery of health care, assuring adequate access to health care, and protecting the rights of those who are provided care within the health care system. It will also examine the public policy, economic, and ethical issues raised by the health care system.

HTH 336 Economics of Health Care Sys 3 Credits

This course presents ways in which economic analysis can be used to explain issues in the health care industry. Microeconomics tools will be used to describe the behavior of consumers, producers, and third parties of the health care sector. The course also investigates the role of government in regulating the health care sector, and in providing services to the poor and elderly. Finally, we will use this foundation to examine some recent changes in this industry, and to analyze the most recent proposals for further changes.

HTH 491 Health Administration Intern 3 Credits

This course provides students minoring in health administration an opportunity to supplement and apply their classroom work in a supervised employment setting with participating firms in the health care sector. Requirements include: a log of daily activities, oral and written reports to the faculty supervisor and a term paper. In addition, the employer will also submit an evaluation of the student's performance.

Prerequisite(s): HTH 205; junior or senior standing; and permission of faculty supervisor.

MKT 380 Healthcare Marketing 3 Credits

The purpose of this course is to introduce students to the role, functions and tasks of healthcare marketing. Attention is devoted to applying basic marketing principles to the healthcare sector. Marketing decision making and analysis will be emphasized through the use of cases and current readings that focus on a variety of healthcare organizations, including hospitals, assisted living facilities, MCOs, and pharmaceutical companies.

Prerequisite(s): MKT 200 or permission of instructor.

PSY 220 Abnormal Psychology 3 Credits

The development of abnormal personalities is discussed, with a survey of the various types of mental abnormalities, including their symptoms, diagnoses, and treatments. Neuroses and psychoses are emphasized.

Prerequisite(s): PSY 100.

PSY 345 Health Psychology 3 Credits

This course focuses on the biopsychosocial model of health in which biological, psychological and social factors contribute to health and wellbeing, as well as illness and disease. After a brief introduction to systems of the body, i.e. nervous, endocrine, respiratory, cardiovascular, digestive, immune, this course will examine health enhancing behaviors such as exercise and nutrition, as well as health compromising behaviors such as drug abuse and other reckless behaviors, along with models that explain behavior maintenance and change. Additionally, attention is devoted to a discussion of how health psychology can function in shaping health care policy.

Prerequisite(s): PSY 100.

PSY 365 Drugs and Human Behavior 3 Credits

Presents the student with an in-depth analysis of the effects of alcohol and selected chemical substances on the behavior and body of the user. Commonly abused substances will be discussed in terms of their history, sources of production, routes of administration, distribution, metabolism and excretion, neurophysiology, tolerance, properties of addiction, withdrawal course and symptoms, and potential beneficial and harmful effects.

Prerequisite(s): PSY 100.

PSY 374 Psychology of the Family 3 Credits

This course examines the significance of family in human development. Using prominent themes of developmental psychology, such as: the role of attachment in forming human relationships, the significance of context in understanding human development, and the resilience of development; this course will explore the existing research on the family. Students are asked to consider their own experiences as members of a family, as well as to understand the varieties of ways family impacts development across the lifespan.

Prerequisite(s): PSY 100, PSY 230 or permission of instructor.

PSY 382 Aging, Brain, and Cognition 3 Credits

This course covers the biological structures and processes underlying cognition in humans and explores modulating factors such as age, sex, disease, stress, and environment. The theoretical and methodological issues of developmental cognitive neuroscience research are addressed. Focus of the course is on brain structure and function in the largest growing segment of our population, persons over the age of 65, and the link between structure and cognitive abilities, both intact and declining. Special attention is paid to those factors related to successful aging and treatments with putative cognitive enhancers.

Prerequisite(s): PSY 100.

PSY 385 Death, Dying and Suicide 3 Credits

Everything that is alive eventually dies, thus death is a part of life. Understanding death can help us to understand and experience life more fully, and it can help us to make appropriate, compassionate responses to death and dying. Class members will examine difficult and controversial psychosocial issues related to dying and death, death perceptions from childhood through older adulthood, religious and death attitudes, the dying process, living with dying, dying in the American health care system, euthanasia and biomedical issues, pain management, suicide, cross-cultural perspectives on dying and death, the business of dying, the legal aspects of dying, and the bereavement process.

Prerequisite(s): PSY 100.

SOC 247 Aging 3 Credits

The emergence of social gerontology, demographic foundation of aging, the aging process, comparative study of aging and aged, effect of aging on the individual, social institutions and aging, and problems of aging and some solutions.

Prerequisite(s): SOC 101.

SOC 346 Health Care and Society 3 Credits

Application and contributions of sociology to medicine; the strategy and methods of sociomedical research; sociology of illness, addictive and mental disorder; medical institutions; health services and medical care; and current status of medical sociology.

Prerequisite(s): SOC 101.

SOC 347 Aging and the Elderly 3 Credits**Business Administration (A.A.)****Program Overview**

This 60-credit program was developed to meet the needs of students for an abbreviated professional curriculum. This program is fully transferable to the bachelor's of science in business administration degree program.

Curriculum Overview

The abbreviated program is designed to enable working professionals to gain knowledge and skills to succeed in the competitive job market. It includes courses in numerical literacy, communication, global awareness, and business analytics and technology.

Admissions Requirement

Official transcripts from all institutions attended with a minimum 2.5 cumulative GPA

ACC 210 Introduction to Accounting 3 Credits

This course provides an introduction to basic principles and methods of accounting essential to preparation, understanding and interpretation of financial statements. Topics include accounting for merchandising concerns, current assets, long-term assets, liabilities and equity accounts. A brief overview of internal control is also covered.

ACC 220 Managerial Uses of Accounting 3 Credits

This course provides an introduction to the use of accounting information in managerial decision-making. Topics include cost behavior, cost classifications, and problem-solving functions of accounting as they pertain to planning, control, evaluation of performance, special decisions, and budgeting. The interpretation of published financial statements and the statement of cash flow are also covered.

Prerequisite(s): ACC 210.

CIS 185 Information Systems Essentials 3 Credits

This course will enable students to use Microsoft Excel and Access to design and create complex applications to support effective decision making. Students will use Excel to design and create spreadsheets to support business analytics. Access will be used to understand, design, create, and utilize relational databases.

CIS 200 Web Application Development I 3 Credits

In the early 1990s, Tim Berners-Lee created a set of technologies to allow information sharing at the CERN particle accelerator in Europe. These technologies dramatically changed the face of computing and became what we know today as the Web. Understanding how to develop and manage applications for the Web is a requirement for the information system professional. Because of the ease of development, deployment, maintenance and general scalability of Web applications, this approach to building and managing applications has become the de facto standard for business application development. This class will examine Web application development in detail. Through a combination of lecture and labs, students will learn the architecture of Web applications, how to develop Web pages using HTML and CCS, how to control user interaction with those pages using the JavaScript programming language. The programming basics of variable declaration and usage, program flow of control, function declaration and calling, and object usage and declaration will also be shown. The use of the JQuery Javascript library to ease the development of Web pages will also be shown.

CMP 120 Expository Writing 3 Credits

Students will increase their competence in the critical reading of challenging college-level texts that engage significant ideas and in writing effective essays that advance a clear and meaningful thesis while demonstrating understanding of those texts. The second of the department's three-course composition sequence,

Prerequisite(s): Successfully completed CMP 115 or have attained a 530 or above on the writing section and 500 or above on the critical reading section of the SAT or a score of 4 or above on the English department placement test.

CMP 125 Research Writing 3 Credits

Introduces students to the process of library research and documented writing. Emphasis will be on the refinement of critical reading, thinking, and writing strategies applied to multiple sources and documented papers.

Prerequisite(s): CMP 120 or BHP 100.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

ECO 200 Principles of Macroeconomics 3 Credits

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 201 Principles of Microeconomics 3 Credits

Market price systems are analyzed. The nature and characteristics of consumer and producer behavior, the theory of pricing in competitive and noncompetitive markets, and determination of the distribution of output are re evaluated. Welfare, social control, monopoly, and income inequality are explored in the light of price theory. The role of the United States in the world economy is explored.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

MSD 105 Quantitative Methods for Business 3 Credits

The aim of this introductory course is to acquaint students with a number of basic mathematical techniques that will enhance their ability to become effective decision-makers in a realistic business environment. Topics covered include linear equations and inequalities, linear programming, summation notation, geometric series, counting techniques, event probability and discrete random variables. Where appropriate, these tools will be illustrated with examples chosen from business settings.

Prerequisite(s): MSD 104 or a passing grade on the Math Placement Exam.

MSD 200 Statistical Methods I 3 Credits

This course is designed to give the student an understanding of continuous random variables, the elements of statistical inference, and an introduction to how these tools may be useful in one's attempt to reach intelligent conclusions in real-world settings. The focus is on the normal random variable, descriptive statistics, sampling distributions, and the frameworks of estimation and hypothesis testing, particularly as they apply to inference for unknown population means and proportions in the one- and two-sample settings.

Prerequisite(s): MSD 105 or equivalent.

MSD 201 Statistical Methods II 3 Credits

The sequel to Statistical Methods I is designed to prepare the student to be able to recognize a variety of additional common inferential scenarios, select and apply appropriate techniques in their analyses, and be aware of the usefulness of computer packages in performing certain relatively complicated statistical calculations. The course covers the one-way analysis of variance, Chi-square tests for non parametric inferences, and regression analysis. Students are expected to submit, for evaluation, the analysis of a real-world data set.

Prerequisite(s): MSD 200.

Business Administration (B.S.B.A)

Program Overview

Rider's business administration major provides students with a general business focus, and is ideal for students who do not want to concentrate in a particular functional area, but instead intend to pursue one of the following goals: attend graduate school, such as law school or a MBA or Ph.D. program, enter a management training or marketing program with a future employer and/or enter a family business or start a new one.

Curriculum Overview

The Business Administration major requires completion of 18 credit hours of upper-level business courses across a variety of disciplines, including: economics, finance, management and marketing and more. For graduation students must achieve an overall GPA of 2.0 in the major. Business Administration majors may not count more than six

credit hours toward a second major, with the exception of International Business. Students majoring in Business Administration can count up to nine credit hours toward the International Business major.

Degree Offered

- B.S.B.A. in Business Administration

ECO 210 Intermediate Macroeconomics 3 Credits

An analytical study of modern aggregate economic theory. Emphasizes the measurement and determination of income, employment, and price levels, as well as economic policy in theory and practice.

Prerequisite(s): ECO 200 and ECO 201.

ECO 211 Intermediate Microeconomics 3 Credits

This course is designed to give the student a thorough understanding of microeconomic theory. As such, the course will analyze the behavior of both consumers and producers, and how this behavior determines the price and quantity observed in the market. The course objective is to provide students with the necessary theoretical background to enable them to solve meaningful and practical problems. Thus, the course is both theoretical and applied in its orientation. The course will emphasize that economic theory can be used not only to solve market oriented problems, but social and public policy problems as well.

Prerequisite(s): ECO 200 and ECO 201.

ECO 300 Business Conditions Analysis/Forecast 3 Credits

Business conditions change daily. Students study them as they change, learning to understand them in the light of economic theory, learning how each part of the economy is affected, and learning the advantages and limitations of the most reliable forecasting methods.

Prerequisite(s): ECO 200, MSD 201.

ECO 301 Managerial Economics 3 Credits

Intensively examines the theory of the firm with applications to the solution of such managerial problems as demand forecasting, the nature and behavior of costs, and product pricing. Introduces the use of simple mathematical and statistical tools that are employed with economic analysis for solving managerial problems.

Prerequisite(s): ECO 200 and ECO 201 and MSD 201 or permission of instructor.

ECO 305 Internatl Trade and Investment 3 Credits

Studies the theory, institutions, and structures underlying the international flow of trade and investment. Topics are: the theory of international trade; balance of payment analysis; the international monetary system; adjustment to balance of payment disequilibrium; regional economic integration; the economic effects of trade restrictions; and trade and foreign investment problems of developing nations.

Prerequisite(s): ECO 200 and ECO 201.

ECO 315 Comparative Economic Systems 3 Credits

Provides a conceptual framework for classifying and comparing economic systems. Presents theory of the capitalist market economy and case studies of the U.S., Japanese, French, and Swedish economies. Examines theory of the centrally planned economy, its transition, and case studies of the Soviet and its successor states, Chinese, and East European economies. Case studies are necessarily limited, concentrating on selected topics, such as transition strategies, industrial policy, etc.

Prerequisite(s): ECO 200 and ECO 201.

ECO 325 Industrial Organization 3 Credits

Explores the relationship between market structure and performance. Topics include concentration in individual industries, product differentiation and entry barriers, pricing and marketing policies, and antitrust policies and their consequences.

Prerequisite(s): ECO 200 and ECO 201.

ECO 326 Economics of Sports 3 Credits

The overall objective of this course is to deepen student understanding of microeconomic principles by applying microeconomic concepts to the analysis of professional and amateur sports. This course will utilize concepts from many different microeconomic specialties, (primarily Industrial Organization, Labor Economics and Public Finance). The tools from these different microeconomic fields will be used to explain and analyze the operation of professional sports teams and leagues in the U.S. with an emphasis on baseball, football, basketball and hockey. International comparisons will be made between professional sports in the U.S. and the rest of the world. The course will also analyze the not-for-profit sports sector, focusing on college sports and the National Collegiate Athletic Association.

Prerequisite(s): ECO 201.

ECO 330 Labor Market Analysis 3 Credits

Intensive study of the economics of the labor market, which examines the determinants of labor supply and demand, and market equilibrium in the labor market. This enables the student to understand what determines wages, labor force participation, occupational choice, the extent of education and training, unemployment, poverty, union membership, and discrimination in the labor market.

Prerequisite(s): ECO 200 and ECO 201.

ECO 335 Economics of the Public Sector 3 Credits

Analyzes the economic roles of government: allocation; distribution; and stabilization. The course examines the tools used by governments, especially the federal government, such as taxation, expenditures, regulations and laws in order to achieve economic goals. The course will give special attention to social regulation.

Prerequisite(s): ECO 200 and ECO 201.

ECO 336 Economics of Health Care Sys 3 Credits

This course presents ways in which economic analysis can be used to explain issues in the health care industry. Microeconomic tools will be used to describe the behavior of consumers, producers, and third parties of the health care sector. The course also investigates the role of government in regulating the health care sector, and in providing services to the poor and elderly. Finally, we will use this foundation to examine some recent changes in this industry, and to analyze the most recent proposals for further changes.

Prerequisite(s): ECO 201 or HTH 205.

ECO 365 Post-Soviet Economy 3 Credits

Studies the contemporary post-Soviet economic system, with emphasis on institutions, policies and issues related to business opportunities in this area. Topics covered include the historic, geographic, political, and cultural setting, planning and plan implementation in the traditional system, current reforms and prospects for the future, with special reference to the foreign trade institutions and experience of foreign firms doing business in the post-Soviet Union and Eastern European countries.

Prerequisite(s): ECO 200 and ECO 201 or permission of instructor.

ECO 450 Seminar in Economic Research 3 Credits

Students in the course learn to conduct economic research by engaging in an actual community-based research project. At the beginning of the semester, students are assigned to a community-based organization. As a team, students meet with the client, devise a plan of action, collect and analyze data and other information, and write a report to the client. At the end of the semester, students present their findings to the client. Students are permitted to take ECO 450 up to two times for credit.

Prerequisite(s): Permission of instructor.

ECO 490 Independent Research and Study 3 Credits

Topic to be approved by professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation.

ECO 491 Internship/Independent Study 3 Credits

This course is available to qualified economics majors and minors. Evaluation is based on a performance appraisal provided by the participating firm and a project/paper judged by the major's internship director. This course can be used as a business or free elective. Grading is done on a pass/fail basis.

Prerequisite(s): Permission of instructor.

FIN 200 Managing Your Money 3 Credits

An introduction to the analysis of a wide range of financial decisions which individuals encounter over their careers and lifetime. Topics include financial goals, tax planning, home ownership versus renting, consumer credit, money management and investments, and managing risk with insurance. This course is open to all Rider students, and it counts as a free elective or a business elective. It cannot be used as finance elective.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

FIN 305 Personal Financial Planning 3 Credits

This course focuses on practical issues and problems involving personal financial budgeting, use of credit, selection of banking services, insurance needs, real estate, investments, tax planning, and retirement planning. An important objective of the course is to provide the student with the tools that are utilized in making personal financial decisions and how to apply those tools for a variety of financial needs.

Prerequisite(s): FIN 220.

FIN 307 Financial Markets & Institutions 3 Credits

This course provides an introduction to the organization and behavior of financial markets and institutions in the economy. The factors determining security prices and interest rates in the money and capital markets are analyzed. An overview of all major financial institutions is presented. In addition, market returns, the regulatory environment, and monetary policy are examined.

Prerequisite(s): ECO 200 and junior standing.

FIN 308 International Finance 3 Credits

Financial management in the international environment. Topics include balance of payments, foreign exchange markets, arbitrage, hedging of currency risk, country risk management, and the evaluation of foreign investment opportunities.

Prerequisite(s): FIN 220.

FIN 309 Intermediate Corporate Finance 3 Credits

This course builds on and extends the concepts of financial management learned in FIN 220. The course examines long-term corporate financing and investment decisions and how those decisions interface with each other. Topics covered include: cost of capital, financial planning and analysis, capital budgeting, capital structure and dividend policy.

Prerequisite(s): FIN 220.

FIN 312 Investments 3 Credits

The fundamentals of investing in stocks, bonds, and other negotiable instruments are covered. Major topics include trading on securities markets, mutual funds, international investing, margin accounts, short sales, determinants of securities prices, and investment risks. Stock options, financial futures, convertible securities, and implications of taxes on investment decisions are also discussed.

Prerequisite(s): FIN 220.

FIN 315 Financial Modeling 3 Credits

Provides instruction in computer use beyond what is available in other finance courses. Topics include more sophisticated applications of computers in financial management, investments, and other areas of finance and business. Students work on cases and projects which require more advanced usage of spreadsheets and other software and databases.

Prerequisite(s): CIS 185 and FIN 220.

FIN 330 Corporate Cash Management 3 Credits

This course is designed for business students seeking an understanding of modern principles and techniques for corporate treasury management. The course material is useful for finance, accounting, and banking professionals or small business owners. Topics include analysis of liquidity and solvency, credit and accounts receivable management, cash collection and disbursement systems, short-term investment and borrowing, management of treasury information and technology, multinational cash management, and other related topics.

Prerequisite(s): FIN 220.

FIN 340 Risk Management 3 Credits

This course examines the risk management process as applied to the firm as a whole. It integrates the management of all risks facing the firm: strategic, financial, hazard, and operational. Techniques for identifying risk, measuring and analyzing it, and selecting an appropriate treatment will be explored.

Prerequisite(s): FIN 220.

FIN 350 Entrepreneurial Finance 3 Credits

This course covers the techniques for acquiring financial resources as a firm advances through successive business stages: seed, start-up, struggling, growing, and stable. In addition, it examines recent trends in credit markets and the latest financial innovations as they impact the process of financing the venture's growth.

Prerequisite(s): FIN 220.

FIN 360 Fixed Income and Derivatives 3 Credits

This course centers on the quantitative portion of the Chartered Financial Analyst (CFA) level 1 curriculum, which includes materials on fixed-income risk and return, fundamentals of risk analysis, derivative instruments and risk management applications of option strategies. The goal is to help students prepare for the exam, as well as introduce them to a variety of topics in finance.

Prerequisite(s): FIN 312.

FIN 370 Financial Analysis and Ethics 3 Credits

This course covers the topics of financial reporting and analysis and related ethical issues. The course would benefit students interested in augmenting their ability to understand, analyze and apply the information in financial statements. It provides essential knowledge for students seeking either the Certified Management Accountant (CMA) or Chartered Financial Analyst (CFA) certifications. Specifically, the course covers the Ethics and Professional Standards of the CFA curriculum, and materials on financial reporting quality and financial statement analysis. Course goals are to help students prepare for the certification exams, as well as introduce all interested students to a variety of topics in financial analysis and ethics.

Prerequisite(s): FIN 312 or POI.

FIN 380 Real Estate 3 Credits

Real estate finance and related subjects in real estate are examined. Topics include measuring cash flows and taxes, valuation methods for real estate investment decisions, location and value in real estate, home ownership, legal matters, and financing methods and techniques.

Prerequisite(s): FIN 220.

FIN 399 The Co-Operative Experience 6 Credits

The co-op program provides students with an opportunity to work full-time in a company and apply what they have learned in their finance and other business classes. It also enhances students' employment opportunities since many employers use a co-op program as a first step before they hire full-time employees. Eligible students include finance majors with at least junior status, a minimum overall GPA of 3.0, and a minimum GPA of 3.0 in any finance coursework completed prior to the submission of the co-op application. Co-op credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): FIN 220.

FIN 412 Investment Analysis 3 Credits

Real-world application of the concepts and techniques of investment analysis and portfolio theory introduced in FIN 312. Students interact with and make recommendations to professional portfolio managers. Topics include analysis and forecasts of business conditions, market interest rates, international opportunities, and corporate profits. Emphasis is placed on the valuation of securities, stock selection, investment timing, technical analysis, and management of portfolio risk with options, futures, and other tools.

Prerequisite(s): FIN 312 or permission of instructor.

FIN 469 Special Topics in Finance 3 Credits

This course is occasionally offered, with the topics and prerequisites set by the finance program.

FIN 490 Independent Research and Study 3 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation. This course can be used as a business or free elective, but with prior approval it can also be used as finance elective.

FIN 491 Finance Internship 1-3 Credits

The internship offers qualified junior and senior finance majors supervised employment with participating companies. The internship may be taken during the fall or spring semester or during the summer session. Students are evaluated periodically by senior staff members of the participating firms and are required to complete a term paper that will be reviewed by the major's internship director. Internship credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): permission of instructor.

HRM 312 Intro to Labor Relations 3 Credits

This course deals with the relationship of labor unions and management, the fundamentals of collective bargaining, and labor legislation. The structure and growth of unions as well as the relationships and problems that exist among private and public sector organizations, the labor force, and government are surveyed.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 313 Legal Aspects of Human Res Mgt 3 Credits

This course deals with the various laws that affect human resource management, including social insurance, legislation, minimum wage laws, OSHA, ERISA, as well as equal employment opportunity legislation. This course is concerned not only with the provisions of these laws, but also with their constitutionality, their effects, and how they are administered.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 315 Employee Selection & Training 3 Credits

This course explains the processes involved in selecting and training employees. With regards to selection, specific examples include, evaluating applicant credentials, administering pre-employment tests and complying with equal employment opportunity legislation. With regards to training, topics include assessing the need for training, designing effective training programs, utilizing methods such as technology to deliver training, and evaluating the effectiveness of training programs.

Prerequisite(s): MGT 310.

HRM 316 Employee Compensation Systems 3 Credits

The goal of this course is to familiarize you with the common methods of compensation used by today's organizations and how these methods could be used to increase motivation, job satisfaction, and performance in the workplace. To accomplish this, we will first discuss the bases of motivation in the workplace. Next, we will then talk about the various compensation options and techniques and the strengths and weaknesses of each in maximizing motivation and performance in an organization.

Prerequisite(s): MGT 310.

HRM 333 Employee Engagement 3 Credits

Employee Engagement is commonly described as a focused passion and enthusiasm that employees bring to their work that produces high-quality performance and positive organizational outcomes such as enhanced firm reputation, customer loyalty, and profitability. In this course, students will explore the concept and value of Employee Engagement, and strategies for energizing an organization's workforce. Projects and activities will focus on the role of the Human Resource function in measuring employee attitudes, designing relevant interventions, and influencing a culture of engagement.

Prerequisite(s): MGT 310.

HRM 441 Sel. Topics: Human Res Mgt 3 Credits

Deals with one area of study in the field of human resource management such as protective labor legislation, mediation and arbitration, the administration of labor unions, or case problems in human resource management. The topic varies each semester and is announced at the time of registration.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or HRM major elective.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 491 Internship 1-4 Credits

Provides the student with the opportunity to supplement and apply human resource management coursework in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing work experiences. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): Junior or Senior; Major in human resource management and MGT 310; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

HRM 492 Internship in Human Res Mgt 3 Credits

Provides the student with the opportunity to supplement and apply their human resource management classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions. 2.75 GPA overall and 3.0 GPA in the major is required.

Prerequisite(s): major in human resource management or management and leadership, and MGT 310; senior status; and permission of instructor.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 320 Managing Workforce Diversity 3 Credits

Demographic shifts, changing patterns of labor force participation, global competition, and a growing cultural emphasis on the celebration of difference have all contributed to the creation of diversity as a hot topic in management. This course explores the opportunities and challenges of the increasingly diverse workforce emerging in the United States today. We will address the knowledge and skills managers must develop in working with others who are different from themselves.

Some of these differences are obvious- gender, race, age, and physical characteristics. Other differences are not as easily observed - family structure, educational level, social class, and sexual orientation. This class incorporates experiential learning techniques for personal growth.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 336 Career Management 3 Credits

How careers are shaped by individual needs and experience and assisted by organization systems and practices is the focus of this course.

The meaning of work and the development of careers are discussed, and students undertake self-assessment for the purpose of career planning. Careers are examined in the context of important changes occurring today in the world of work. The impact of the executive, organizational counselors and trainers, and the educational system upon the development of human potential is examined, along with the techniques for human resource planning and development.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 346 Negotiation 3 Credits

The purpose of this course is first, to explore the major concepts and theories behind effective negotiating practices and second, to develop negotiating skills applicable to a wide range of contexts. A knowledge of negotiation is a crucial requirement for anyone interested in a business career since it is a common mechanism for implementing change and for resolving conflict in the workplace. Topics will include two-party negotiations, power and politics, mediation, arbitration, and collective bargaining. A variety of teaching techniques will be used including readings, discussion, and role-playing.

Prerequisite(s): MGT 201 or permission of the instructor.

MGT 355 Team Management 3 Credits

This course prepares students to work in organizations that use teams as an integral part of their functioning-an increasingly common practice. The class involves intensive group interaction, focusing on individual growth in group settings. Working with other students in role-plays, exercises, and team assignments allows the student to develop better communication and leadership skills.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 363 Management Skills 3 Credits

The focus of this course is on specific skills necessary for success in a management role. These skills include leading, communicating effectively, delegating, conflict and time management and motivating others. Students will have opportunities to practice skills and to apply their knowledge to business cases.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 375 International Management 3 Credits

This course explores the ways in which culture impacts management practices and organizational behavior and dynamics. Topics include cross cultural communication, expatriate selection and training, leading and motivating cross cultural teams, developing organizational strategies to compete in a global market place, international business ethics, and current topics.

Prerequisite(s): MGT 201.

MGT 421 Sel Topics:Mgt & Organztn Behv 3 Credits

The seminar focuses on an area of study announced at the time of registration (students should check the registration material). Examples of possible topics are: leadership, motivation, and organizational behavior research. Prerequisites vary according to the topic and are listed in the registration material.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 448 Sem Small Bus Consul 3 Credits

This course utilizes student teams to assist existing small businesses in solving problems or researching opportunities. Students will spend the majority of time in the field utilizing an experiential learning approach. Weekly activity logs, proposal development, and project completion are required. Restricted to seniors.

Prerequisite(s): ENT 348 and permission of instructor.

MGT 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or MGT major elective.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 491 Intern Management/Org Behavior 3 Credits

Provides the student with the opportunity to supplement and apply their management and leadership classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): major in management and leadership or human resource management and MGT 363, or senior status; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MKT 205 Advertising Principles 3 Credits

Basic theory, functions, principles, and applications of advertising are the focus of this course. The relation of advertising to our economy, the advertising department and the ad agency, selection of media, advertising practices, and the use of research to improve advertising techniques are covered.

Prerequisite(s): MKT 200. Required for advertising majors.

MKT 250 Retailing Management 3 Credits

The principles underlying successful retailing are analyzed within the framework of the strategic-planning process. Topics covered include location, merchandise planning, customer service, image, atmosphere, layout, pricing, promotion, personnel and operations management.

Prerequisite(s): MKT 200.

MKT 260 Service Marketing 3 Credits

Focuses on the unique challenges of managing services and delivering quality service to customers. Emphasis is placed on the total organization, and how effective marketing and customer focus must be coordinated across multiple functions. The course is applicable to service organizations and to organizations that depend on service excellence for competitive advantage. Topics include customer-focused management, and customer satisfaction, retention, lifetime value and profitability. Students will learn to map services, understand customer expectations, and develop relationship marketing strategies.

Prerequisite(s): MKT 200.

MKT 280 Sports Marketing 3 Credits

The course focuses on the unique challenges of marketing sports at a variety of levels: youth, college, professional, and international. The challenges of attracting and retaining fans and participants as well as of building and maintaining strong brand identity are at the heart of the course content. By evaluating case studies and examining current issues in sports marketing, students will gain an understanding of what it means to be a professional marketer of a sports organization and/or event.

Prerequisite(s): MKT 200.

MKT 310 Business to Business Marketing 3 Credits

This course examines the business-to-business marketplace, and the planning and control tools used by its entities in managing the product, pricing, promotion, channel and supply chain management strategies.

Prerequisite(s): MKT 200.

MKT 320 Consumer Behavior 3 Credits

The nature and determinants of consumer behavior are studied, with attention given to the influence of socio-psychological factors such as personality, small groups, demographic variables, social class, and culture on the formation of consumer attitudes, consumption patterns, and purchasing behavior.

Prerequisite(s): MKT 200; Required for advertising majors.

MKT 330 International Marketing 3 Credits

This course examines the global marketplace and the complexities of its environmental influences, and necessary adaptations in formulating the strategies for product, pricing, promotion, channel and supply chain management.

Prerequisite(s): MKT 200.

MKT 340 Personal Selling 3 Credits

Examines persuasive techniques utilized in sales presentations conducted on a person-to-person basis. Major course emphasis is on developing effective selling techniques; understanding the company, its products and the role of the salesperson in implementing product/market strategies; understanding the customers and the selling environment; application of effective sales presentation techniques; recognizing selling opportunities and careers.

Prerequisite(s): MKT 200.

MKT 345 Customer Focus 3 Credits

Marketing supply chain management programs are concerned with the creation and delivery of value to customer and organizations. No longer simply the domain of the warehouse manager or logistics director, supply chain management is viewed by most companies as a mission-critical element. Marketing focuses on developing an understanding of customers and markets, creating products and services based on that understanding, and communicating and delivering the value added. This course will teach the student the essential role of marketing in all aspects of successful supply chain management - relationship management, technological and financial - and it will help the student understand the structure, functions, principles and methods employed in discovering and translating consumer needs and wants into product and service specifications and then transferring these goods and services from producers to consumers or end users.

Prerequisite(s): MKT 200 and GSC 115 or permission of instructor.

MKT 350 Retailing Management 3 Credits

The principles underlying successful retailing are analyzed within the framework of the strategic-planning process. Topics covered include location, merchandise planning, customer service, image, atmosphere, layout, pricing, promotion, personnel and operations management.

Prerequisite(s): MKT 200.

MKT 366 Marketing Research 3 Credits

Topics include specific research procedures in gathering, processing, analyzing, and presenting information relevant to marketing problems: advertising planning and effectiveness; product development; distribution channels; sales techniques; consumer behavior; and forecasting. Student learning about research planning, implementation, and interpretation is facilitated by the use of projects or cases.

Prerequisite(s): MKT 200; MSD 200, MSD 201; junior standing; Required for marketing and advertising majors.

MKT 369 International Advertising 3 Credits

This course introduces students to the general landscape of international advertising with emphasis on understanding the opportunities and challenges entailed in international advertising management. The course will cover the subject from three aspects, including the international advertising environment, the international advertising industry, and international advertising strategies.

Prerequisite: MKT 200 or permission of instructor.

MKT 370 Internet Marketing 3 Credits

This course emphasizes the discipline of internet marketing, including practices of leading online marketing companies, state of the art online research and demonstrates how the Internet is creating value for customers and profits for businesses while also fitting into a firm's complete marketing strategy. This course will provide a strategic and tactical toolkit for the online marketer, help students understand how and why the Internet is changing traditional marketing and allow students to develop the skills, strategies and tactics important to develop successful Internet marketing plans.

Prerequisite(s): MKT 200 and CIS 185.

MKT 375 Digital Advertising and Social Media 3 Credits

This course surveys the concepts, principles, practices and industry standards of digital advertising, including standard display and rich media advertising, search advertising, email advertising, game advertising, and mobile advertising. It also introduces the strategies and tactics in social media marketing. The course emphasizes a strategic, holistic view of digital advertising and social media as marketing communication tools that are situated in the marketing strategic framework and employed to engage consumers in community building.

Prerequisite(s): MKT 200.

MKT 380 Healthcare Marketing 3 Credits

The purpose of this course is to introduce students to the role, functions and tasks of healthcare marketing. Attention is devoted to applying basic marketing principles to the healthcare sector. Marketing decision making and analysis will be emphasized through the use of cases and current readings that focus on a variety of healthcare organizations, including hospitals, assisted living facilities, MCOs, and pharmaceutical companies.

Prerequisite(s): MKT 200 or permission of instructor.

MKT 440 Sales Management 3 Credits

By means of lectures, discussions, and case studies, the field of marketing management is analyzed from the viewpoint of sales executives. The responsibilities for planning and administering personal selling operations are emphasized. Considerable attention is given to other activities for which sales executives may be wholly or jointly responsible, such as decision making on promotion and brand management.

Prerequisite(s): MKT 200 and senior standing.

MKT 444 Spec. Topics Honors: Mkt & Law 3 Credits**MKT 460 Marketing Management Seminar 3 Credits**

This capstone course for marketing majors employs a top management approach to the overall marketing task, including planning, organizing, controlling, and integrating all the activities of the marketing program. Integration of marketing with other operations of the business unit is emphasized. Major problems and current trends are identified and analyzed through case discussion.

Prerequisite(s): Marketing major and 15 semester hours of marketing; Required for marketing majors.

MKT 469 Selected Topics in Marketing 3 Credits

The study of a topic (or combination of topics) that represents some dimension of marketing or has important and direct implications for marketing management. Theoretical foundations as well as special applications of marketing decision making may be explored. Readings, research, lectures, discussions, or other appropriate methods are employed to stimulate student learning.

Prerequisite(s): MKT 200 and senior standing or permission of instructor.

MKT 490 Independent Research and Study 1-4 Credits

Topic to be approved by the professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation, which may be counted as a business or free elective.

MKT 491 Internship-Based Indep Study 3 Credits

Provides the student an opportunity to supplement and apply classroom work in supervised employment with participating marketing and advertising firms. Requirements include a journal with a log of daily activities, and a project or term paper presented to and evaluated by the internship sponsor. Evaluation will also include a report by the company on the intern's performance. Credits may be used to satisfy business or free elective requirements.

Prerequisite(s): permission of instructor.

Business Basics Certificate

The Business Basics certificate program is designed for students holding an undergraduate degree in areas other than business. The 18–24 credits program includes courses in accounting, computing, economics, finance, legal studies, management and leadership, management science and marketing. The Business Plus certificate program will provide students a good foundation toward the Master in Business Administration.

Admission Requirements

Minimum admissions requirements for the Business Basics and Business Plus certificate programs are:

- a baccalaureate degree in an area other than Business;
- a 2.5 GPA in all undergraduate work.

This program is available only to students enrolled in CCS.

Program Completion and Certification

Students must achieve a 2.5 GPA in their coursework with no grade lower than a "C" to successfully complete a College of Business Administration certificate. Students leaving CCS for any other Rider undergraduate program before earning the certificate will not be eligible for the certificate.

Program Requirements

(18 credits)

ACC 220	Managerial Uses of Accounting	3
CIS 385	Management Information Systems	3
ECO 200	Principles of Macroeconomics	3
MSD 200	Statistical Methods I	3
MSD 201	Statistical Methods II	3
MSD 340	Production and Operations	3
Total Credits		18

Program Completion and Certification

Students must achieve a 2.5 GPA in their coursework with no grade lower than a "C" to successfully complete a College of Business Administration certificate. Students leaving CCS for any other Rider undergraduate program before earning the certificate will not be eligible for the certificate.

Courses

ACC 220 Managerial Uses of Accounting 3 Credits

This course provides an introduction to the use of accounting information in managerial decision-making. Topics include cost behavior, cost classifications, and problem-solving functions of accounting as they pertain to planning, control, evaluation of performance, special decisions, and budgeting. The interpretation of published financial statements and the statement of cash flow are also covered.

Prerequisite(s): ACC 210.

CIS 385 Management Information Systems 3 Credits

The course focuses on the management and use of information systems and technology for the strategic and operational advantage of the firm. Students explore the business value of information resources including current communication, database, as well as hardware and software technologies. GSC 385 can fulfill the CIS 385 requirement for all business majors. Please note: Students will not receive credit for both GSC 385 and CIS 385 without prior approval by the Dean's office.

Prerequisite(s): CIS 185 and junior or senior standing.

ECO 200 Principles of Macroeconomics 3 Credits

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

MSD 200 Statistical Methods I 3 Credits

This course is designed to give the student an understanding of continuous random variables, the elements of statistical inference, and an introduction to how these tools may be useful in one's attempt to reach intelligent conclusions in real-world settings. The focus is on the normal random variable, descriptive statistics, sampling distributions, and the frameworks of estimation and hypothesis testing, particularly as they apply to inference for unknown population means and proportions in the one- and two-sample settings.

Prerequisite(s): MSD 105 or equivalent.

MSD 201 Statistical Methods II 3 Credits

The sequel to Statistical Methods I is designed to prepare the student to be able to recognize a variety of additional common inferential scenarios, select and apply appropriate techniques in their analyses, and be aware of the usefulness of computer packages in performing certain relatively complicated statistical calculations. The course covers the one-way analysis of variance, Chi-square tests for non parametric inferences, and regression analysis. Students are expected to submit, for evaluation, the analysis of a real-world data set.

Prerequisite(s): MSD 200.

MSD 340 Production and Operations 3 Credits

This course introduces the concepts and techniques of designing and managing manufacturing and service systems and their operations effectively and efficiently. Major topics include product and process design, facility location, forecasting, aggregate planning, inventory management, supply chain management, project management, just-in-time systems, quality assurance, linear programming, and the transportation problem. Current issues such as productivity, global competitiveness, and quality are also discussed.

Prerequisite(s): MSD 105 or MSD 110, MSD 200 or MTH 340, MSD 201 or MTH 341.

Criminal Justice

Program Overview

Rider University's law and justice program houses a major in criminal justice (<http://www.rider.edu/academics/colleges-schools/claes/liberal-arts-programs/law-justice/criminal-justice-major>), as well as a minor in legal studies (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/law-justice-1>) and a minor in criminal justice studies (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/law-justice-2>).

Law and justice courses provide students, regardless of specific career goals, with tools for reasoned appraisal of how the law works and its social consequences and makes students better citizens by demystifying legal institutions and policies, addressing and evaluating these in terms of evidence, rather than myths and assumptions.

Experienced faculty members of the Law and Justice Program Committee (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/law-justice-0>) are available to advise students interested in pursuing a career in criminal justice, law or law-related fields. Faculty advisors may assist students in course selection as well as law school and graduate school applications.

The Law and Justice Program often sponsors workshops (<http://www.rider.edu/academics/colleges-schools/claes/liberal-arts-programs/law-justice/student-awards-honors-events-an-0>) on various aspects of career preparation, law school selection, and the law school application process.

Curriculum Overview

The major is designed to provide students with a multidisciplinary understanding of law, its development and violation. Courses in the program include a wide spectrum of academic departments and programs, including business policy, baccalaureate honors, communication, economics, philosophy, political science, psychology and sociology, as well as courses developed specifically for the Law and Justice Program.

The law and justice program's criminal justice major and law and justice minor are designed to provide students with in-depth knowledge and understanding of laws, legal institutions and processes and their relationships to social, moral, political, and economic issues. Students will benefit from learning to approach law (both civil and criminal), and law enforcement from diverse perspectives.

Students can focus their course of study around their specific career goals by selecting from a wide range of courses within the program. In addition, the criminal justice major and law and justice minors can often be combined with other major and minor programs.

SOC 396	Applied Sociology
Internships and Advanced Research ³	
LAW 490	Independent Research & Study
LAW 496	Honors Thesis in Law & Justice
LAW 491	Internship in Law and Justice
SOC 491	Internship in Sociology
PHL 491	Internship in Philosophy
POL 491	Internship in Politicl Science
PSY 491	Internship in Psychology
Free Electives	
Total Credits	120

¹ SOC 101 is waived as a pre-requisite for criminal justice majors ONLY for SOC 206 and SOC 219. SOC 101 is strongly recommended for criminal justice majors.

- ² Advance research related to criminal justice taken as an Independent Studies course or as Honors Thesis if approved by the Law and Justice Director.
- ³ Internships related to Criminal Justice as approved by the Law and Justice Director

Note:

- No course may be used to satisfy more than one requirement in the CJS major
- Students are required to complete a minimum of 5 courses at the 300 or 400 levels in Categories II - V.

BHP 211 Seminar: Theories of Justice and the American Common Law 3 Credits

Examines some of the 'perennial' theories of justice, both classical and modern, that have left their mark on the evolution of Western concepts of justice. The practical implications of such theories and the two-way traffic between them and social realities will be explored through their application by the American courts. In addition to studying actual cases, students will participate in the adjudication of theoretical cases, both fictional and taken from contemporary realities.

BHP 322 Hon Sem: Guilty and Innocent 3 Credits

Through the study of social theory and research, legal cases, fiction, non-fiction, film and poetry, this course examines theories of criminal motivation and behavior, determination of blame, and assignment of appropriate punishment. Topics include changes in legal and cultural understandings of individual and social responsibility for criminality; the nature, purpose, and effects of punishment; and the impact of race, class and gender on defining crime and determining guilt or innocence.

HIS 301 Constitutional History of U.S. 3 Credits

Surveys the English, Colonial, and Confederation backgrounds of American law and constitutionalism; the framing, adoption, and implementation of the Federal Constitution and its later development; the role of law in the nation's history; the changing interpretations of federalism; the growth of judicial review; and the increasing role of the Supreme Court.

LAW 140 Intro Seminar in Law & Justice 3 Credits

Introduces students to the interdisciplinary study of law and justice. The seminar is designed to enable students to think critically about legal issues, address legal problems from various viewpoints, and apply different types of theories of justice to analyze laws and legal institutions. Students will learn to examine law and legal issues from a variety of perspectives and approaches: anthropological, historical, literary, philosophical, political, psychological, and sociological. Open to freshmen and sophomores only.

LAW 150 Intro to Forensics 3 Credits

Introduces students to principles of forensic science. Whether the issue is establishing paternity or cause of death, determining arson or liability, or deciding criminal guilt or innocence, collecting and evaluating forensic material is typically involved. Students will learn the meaning and significance of scientific evidence and its role in criminal investigations and civil and criminal trials. Students will learn how forensic scientists work, define a problem, collect data, and analyze results. Case studies, crime simulations and examination of criminal evidence will highlight the application of scientific principles.

LAW 204 Law, Literature, and Film in America 3 Credits

Focuses in an interdisciplinary manner on law and justice as represented in American literature and films. It analyzes novels, short stories, and selected non-fiction texts from the perspectives of literary criticism, social history, and cultural and American studies.

LAW 210 Criminal Investigation 3 Credits

Approaches criminal investigation conceptually. Students consider the social issues involved in criminal investigation, as well as ethical and legal aspects of it. The course covers such topics such as the principles of criminal investigations, the rules and procedures of preliminary and follow-up investigations, the art of interrogation, recording of statements, confessions, and the collection and preservation of physical evidence at the crime scene. Emphasis is placed on the need for meticulous adherence to rules of law and ethical practices, as an investigation proceeds from initial actions to arrest, and eventual prosecution. The course also examines the methods used in scientific interpretation of evidence and the preparation of criminal cases for trials, as well as its role in today's criminal justice system.

Prerequisite(s): LAW 150.

LAW 302 Crime & Justice in the Media 3 Credits

This course focuses on the impact of media on Americans' perceptions and understanding of the extent and causes of crime, and the effectiveness and purposes of crime policy. It examines how criminals, types of crime, crime policies and the criminal justice system are portrayed in various media outlets, including film, tv, newspaper, and electronic/internet. It explores the historical and contemporary relationships between media representations of criminal behavior, crime as a social problem, and the nature of the criminal justice system and contrasts these to their social realities.

LAW 304 Women and Law 3 Credits

Explores the social, economic, political and cultural context of laws relating to women and gender, such as workplace discrimination, divorce and child custody and reproductive rights. It examines how such laws have changed historically and the impact such laws have had on women as well as on men and on American social institutions, such as the family, politics, and the workplace. The course also examines women in the legal profession and their impact on the practice of law and legal reasoning.

LAW 305 Trial Advocacy 3 Credits

Students will apply fundamental legal concepts and rules of evidence to specific cases. By engaging in trial simulations, students will evaluate various forms of evidence, identify legal principles and evidentiary rules that impact a criminal trial, learn about trial procedures, pursuit of case theories, and witness, exhibit and jury selection.

LAW 307 Criminal Justice Practice 3 Credits

This course will consider the ways criminal justice agencies and occupations are shaped by social, economic, political, technological and legal changes. Through case studies and projects students will examine the work, culture, and work settings of various criminal justice practitioners, assess the impact of social policies on criminal justice careers, and identify new directions in the field. Students will develop the reading and writing skills needed by an array of criminal justice practitioners.

LAW 310 Cyberspace Law and Policy 3 Credits

Explores the legal and policy concerns raised by the Internet, nationally and globally. The course considers issues of legal regulation of the Internet, and consider the debate about whether cyberspace can or should be regulated. Attention will be given to the applicability of principles of law and models of regulation. Topics addressed will include jurisdiction, freedom of expression, intellectual property, privacy protection, safety concerns, equal access, electronic commerce, and computer crime.

LAW 365 The Rights of the Accused 3 Credits

Analyzes the major substantive and procedural rights accorded to the criminally accused by the United States Constitution. Particular attention will be given to the right to counsel, confessions and self-incrimination, arrest, search and seizure. Students will learn to argue and write hypothetical case opinions.

LAW 401 Hate Crimes in the United States 3 Credits

Provides an interdisciplinary exploration of hate crimes in the United States, its causes and consequences. It will examine the social, political, and legal issues that have shaped policies and laws designed to respond to hate crimes and assess their effectiveness. Debates about the nature of hate crimes and the special laws and sentencing provisions developed to deal with them will be discussed. Topics include hate crimes on college campuses, hate on the Internet, legal and constitutional issues, and criminal justice enforcement.

LAW 460 Criminal Justice Senior Seminar 3 Credits

Draws on and develops students' knowledge and understanding of crime, criminal law and criminal justice institutions, and applies these to a specific topic, method, institution, or controversy. Topics vary. Students will be expected to contribute to seminar discussions and to complete research projects related to the seminar theme. Required for criminal justice majors seniors; open to others only by permission of the director of the Law and Justice Program.

LAW 490 Independent Research & Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

LAW 491 Internship in Law and Justice 1-4 Credits

Provides supervised work experience in an institution, office, or agency related to law or law enforcement, such as courts, prosecutor/defense attorney offices, private law offices, state agencies, and local police departments. Students are expected to apply and broaden the knowledge obtained from law and justice minor courses to their fieldwork experience.

Prerequisite(s): 2.75 GPA and permission of the Director of the Law and Justice program.

LAW 496 Honors Thesis in Law & Justice 3-6 Credits

Entails substantial research and writing on a topic selected by the student. Proposals must be reviewed and approved by the law and justice program committee. Proposals must be submitted at least four weeks prior to course registration.

Prerequisite(s): Seniors in the minor with a minimum cumulative GPA of 3.25 and a 3.25 GPA in law and justice minor courses.

PHL 115 Ethics 3 Credits

A combined historical and systematic analysis of the problems of ethics. Such problems as the nature and meaning of moral values and judgments, moral responsibility and freedom, conscience and happiness, the good life, and the relativity of value, are explored through the writings of such philosophers as Plato, Aristotle, Aquinas, Kant, Mill, and Nietzsche.

PHL 303 Philosophy of Law 3 Credits

An examination and analysis of selected topics including classical and contemporary theories in the philosophy of law and moral philosophy. Such topics as the nature of the law and legal reasoning, the legal enforcement of morality, protection of personal liberty, and the moral justification of punishment are considered. Such philosophers as Aquinas, Austin, Holmes, Bentham, Hart, and Dworkin are read and discussed.

POL 230 Methods of Political Analysis 3 Credits

An overview of the various qualitative and quantitative methods that political scientists use to study their discipline. Themes include analyses of political participation and support, methods of studying elections, measures of political tolerance and liberalism.

POL 235 Race/Ethnicity in Amer Politic 3 Credits

Examines the changing political, economic, and social situation of racial and ethnic groups in American politics since the 1950s. Topics include the relationship between race/ethnicity and voting behavior, political parties, and election results. Includes an analysis of specific areas of contemporary racial and ethnic conflict, such as voting rights, immigration, and affirmative action.

POL 260 Politics of Law and Order 3 Credits

The constitutional, legal, political, and administrative aspects of the criminal justice system in the United States are studied, including the court system at all levels of government, law enforcement agencies, correctional programs and institutions, probation, parole, and the relationship of our legal institutions to the broader political system.

POL 361 Courts, Judges and Politics 3 Credits

In-depth examination of the nature of judicial decision-making and the impact that judicial decisions have on society. Considers the sources of judicial authority, judicial fact-finding, statutory and constitutional interpretation, individual and collective processes of judicial decision-making, relations between judges and other government officials, and the political consequences of judicial decisions with particular emphasis on federal courts and judges. Note: This course is cross-listed as HLS 361. Students may not get credit for both POL 361 and HLS 361.

PSY 279 Psychology and Law 3 Credits

Introduces students to a study of selected topics in psychology and law. Topics include eyewitness testimony, jury selection, and decision making

Prerequisite(s): PSY 100.

SOC 206 Deviance and Crime 3 Credits

Considers deviant behavior as violation of social norms. Examines the concepts of deviance and crime in socio-historical context. Evaluates major theories advanced to explain deviance. Surveys different types of deviance, including conventional crime, non-criminal deviant behavior, and white-collar corporate, and government crime.

Prerequisite(s): SOC 101.

SOC 216 Youth and Crime 3 Credits

In-depth examination of the nature and extent of youth criminality in the U.S. Explores changes in youth culture and theories of delinquency. Social policies are related to youth criminality and the youth justice system is considered.

Prerequisite(s): SOC 101.

SOC 219 Introduction to Criminal Justice: Police, Courts, Corrections 3 Credits

This course introduces students to the sociological study of the criminal justice system. It examines the cultural and social foundations of this system, and review debates about problems with the criminal justice system and proposals to change it. Topics covered include nature of the crime problem, requirements of criminal law, policing, the role of the courts and legal professionals, sentencing, incarceration and alternatives to it. [FORMERLY SOC-319 Criminal Justice and Corrections] Pre-requisite SOC 101 3 Credit hours.

SOC 246 Drugs, Crime & American Society 3 Credits

Explores the nature and extent of drug use in the U.S., how drugs are legally defined and socially constructed, and considers how and why drug policies have developed and changed historically. Considers how the criminalization of drugs has impacted policing strategies, courts, probation programs, sentencing and corrections, as well as other social institutions. Examines the role of local and federal agencies in enforcing drug laws, and considers debates about directions for legal reforms.

Prerequisite(s): SOC 101.

SOC 301 Methods Of Sociological Research 3 Credits

The second in a series of required courses for majors. Builds upon the Introductory Seminar in Sociology. Social research methods using documents, observations, and questionnaires are taught, and used in completing research projects.

Prerequisite(s): SOC 201.

SOC 313 Gender and Criminal Justice 3 Credits

This course will examine women's experiences with the criminal justice system as offenders, victims, prisoners, and practitioners. It will consider how gender has shaped theories of crime and criminological research. It will explore how cultural constructions of gender have influenced substantive and procedural criminal law, the ways criminal justice agencies respond to crime, and how these have changed historically. Attention will be given to the development of new approaches, reforms, and challenges.

Prerequisite(s): SOC 101.

SOC 317 Law and Lawyers 3 Credits

Relationships between law, the economy, and the state are explored. Discussion of laws, legal systems and legal reasoning using cross-cultural comparisons and historical analysis of these in the United States. Particular attention given to impact of law on corporations, workers, women, and minorities. Changes in legal profession and legal education are examined.

Prerequisite(s): SOC 101.

SOC 321 White Collar & Corporate Crime 3 Credits**SOC 322 Punishment and Corrections 3 Credits**

This course explores the nature, forms, rationales, and effectiveness of punishment as a form of crime control. It traces the development of corrections in the U.S., identifies cultural trends and developments in penology, including mass incarceration and supermax prisons, considers the ways race and class have shaped these, and the reverberating effects penal policies have had on American culture and society beyond the criminal justice system. It examines the role of laws, politics, crime control agencies, as well as of media, and corporations in shaping penal policies. Topics also include: prison subcultures, inmate rights, correctional practices, privatization of prisons, and alternatives to punitive policies of incarceration and capital punishment.

Prerequisite(s): SOC 101.

SOC 342 Police and American Society 3 Credits

This course examines important issues regarding police in American society, such as the paradoxes inherent in police work, police organization and strategies and their effectiveness, the dilemmas of supervising police work, police unionism, the nature and implications of police occupational subculture, the use of police discretion, forms of police misconduct and accountability, professionalization of police and the trend toward police privatization. It also considers the diversity of the police force, trends in the delivery of policing services, the impact of new technologies on policing, and the challenges of policing in a multicultural society.

Prerequisite(s): SOC 101.

SOC 343 Policing and Counter Terrorism 3 Credits

This course is designed as an upper level (undergraduate/graduate) combination lecture and discussion section on the foundations of international security. It will examine the concept of security from both the macro and micro level. We will discuss a mix of security strategies (balance of power, alliances, rearmament, collective security, deterrence), theoretical perspectives on security (Neorealism, Neoliberalism, Critical Theory, Copenhagen School), great power and third world security, democratic and non-democratic security, classic threats (changes in relative power, proliferation) and new threats (environment, population movements, terrorism), and concepts of security ranging from state survival, to societal security, to unit level-variables such as Human Security.

Prerequisite(s): SOC 101.

SOC 345 Race and Crime 3 Credits

Examines the impact of crime policy on minority communities in the United States, with particular attention to the impact of "The War on Drugs", three-strike laws, and mandatory sentencing on minorities and minority communities. Drawing on sociological research, the course explores myths and realities concerning the relationship between race and crime. The relationship between racial attitudes, historical race relations, and mass incarceration are discussed.

Prerequisite(s): SOC 101.

POL 300 U.S. Constitutional Law 3 Credits

The role of the Supreme Court in the American political system is assessed. Topics include the staffing and functioning of the Supreme Court and the federal judicial bureaucracy, the origins and development of judicial review, and the role of the Supreme Court in national policy-making. Note: This course is cross-listed as HLS 300. Students may not get credit for both HLS 300 and POL 300.

POL 301 Civil Liberties in the U.S. 3 Credits

The American doctrine of civil liberties in theory and practice. Emphasis on analyzing the freedoms of speech, press, assembly, and religion, the right of privacy, and the problem of discrimination in the context of contemporary issues and problems. Particular attention to the role of the Supreme Court in this area. Note: This course is cross-listed as HLS 301. Students may not get credit for both HLS 301 and POL 301.

PHL 130 Political Philosophy 3 Credits

An introduction to the problems of political philosophy with an emphasis on recent and contemporary issues, such as the conflict between liberal and conservative ideologies, fascism, revolution, civil disobedience, and the concept of legitimate political authority.

PHL 202 Social Philosophy 3 Credits

Emphasizes social ethics through critical studies of such contemporary problems as abortion, euthanasia, the death penalty, pornography and censorship, animal rights, drug use, sexual morality, environmental ethics, and world hunger.

PHL 360 Contemporary Ethics 3 Credits

An examination of recent and contemporary challenges to traditional ethical theory including such movements as logical positivism, cultural relativism, feminism, environmentalism, multiculturalism, and postmodernism. Such problems as the meaning and cognitive status of value judgments, the relation between fact and value, the relativity of values, and how value judgments can be justified are considered.

PHL 491 Internship in Philosophy 1-4 Credits

Students will work under supervision within an area hospital, corporation, or legal agency. The specific duties and tasks will be developed jointly by the intern, intern agency, and faculty supervisor. Within the hospital setting, students will work with the Hospital Medical Ethics Committee. Within the corporate setting, there will be two types of internships: students will work in the corporate office responsible for addressing the ethical issues that arise in the business environment; or students will work in a department that allows them to explore the potential business applications of their philosophic intellectual training. Within the legal setting, students will work with the federal magistrate, prosecutor, or public defender, exploring issues in the philosophy of law that arise in the practice of law. Students must have completed four philosophy courses, one at the 300 level, before applying for the internship. No more than six credits will be allowed toward graduation. A member of the department of philosophy will supervise the internship.

Prerequisite(s): juniors and seniors with a minimum of 2.7 cumulative GPA and 3.0 GPA in philosophy, or permission of the department of philosophy.

POL 325 Public Administration 3 Credits

Public administration in modern society, emphasizing the administrative formulation of public policy and its implementation. Attention on who gets what, when, and how from the decisions of administrative units; the role administrators have in policy-making compared to elected legislators, chief executives and judges; the effect administrators have on the benefits citizens receive from government; and the effect administrators have on citizens' behavior. Note: This course is cross-listed as HLS 325. Students may not get credit for both HLS 325 and POL 325.

POL 327 Contemp Issues Amer Pub Policy 3 Credits

An in-depth examination of current issues in American politics. Drunk driving, political corruption, drug policy, education, and poverty are among the issues to be considered. Emphasis on analyzing policy problems and on developing and evaluating proposed solutions.

POL 335 Urban Politics 3 Credits

Political structure and administration of municipalities in the United States. Emphasis on problems posed by suburbanization, global and regional shifts in business, economic dislocation, housing, race relations, and policing.

POL 345 Justice 3 Credits

The existence of society over time requires high degree of predictability and hence laws, whether explicit or implicit. These derive their capacity to regulate life from the widespread notion that they are proper and that they should be obeyed. In a word, they accord to our notions of justice. These, however, are not stable. Resting on the understandings of man, society, nature and the relations between them, they develop under the impact of human thought and changing realities. The result is what can be compared to a layered cake. This course treats some of the main contributions made by philosophers from Plato to Rawls to our concept of justice and the manner by which they have shaped our concepts of justice in the US and West in general. Cases in which courts (mainly the US Supreme Court) made use and applied the thinking of earlier philosophies of justice will illustrate the process by which we adjust the boundaries between legality and criminality and determine how we should behave towards each other.

POL 350 U.S. Foreign Policy and Security Policy 3 Credits

Principles, institutions, and processes involved in the formulation and implementation of policies regarding the nation's military, economic, and environmental security within the global framework. Strands, trends, and problem areas in U.S. foreign policy, with focus on the changing global environment of the post-Cold War world. Note: This course is cross-listed as HLS 350. Students may not get credit for both HLS 350 and POL 350.

POL 351 Critical Views of Global Security 3 Credits

This course will examine the foundations of international security. It will examine the concept of security from both the macro and micro level. We will discuss a mix of security strategies (balance of power, alliances, rearmament, collective security, deterrence), theoretical perspective on security (Neorealism, Neoliberalism, Critical Theory, Copenhagen School), great power and third world security, democratic and non-democratic security, classic threats (changes in relative power, proliferation) and new threats (environment, population movements, terrorism), and concepts of security ranging from state survival, to societal security, to unit level-variables such as Human Security. Note: This course is cross-listed as HLS 351. Students may not get credit for both HLS 351 and POL 351.

PSY 220 Abnormal Psychology 3 Credits

The development of abnormal personalities is discussed, with a survey of the various types of mental abnormalities, including their symptoms, diagnoses, and treatments. Neuroses and psychoses are emphasized.

Prerequisite(s): PSY 100.

POL 363 Hum Rights in Global Context 3 Credits

Examines human rights – droits de l'homme, derechos humanos, Menschenrechte, "the rights of man" – are, literally, the rights that one has because one is human. What does it mean to have a right? How are being human and having rights related? This course provides an introduction to theory and global practice of human rights. Human rights claims play an increasingly central role in political and social struggles across the world. The adoption of the Universal Declaration of Human Rights in 1948 signaled a proliferation of international human rights law and transnational non-governmental activism. While the promotion of human rights has become global, adherence to those standards remains highly uneven and gross violations and atrocities continue to occur. Given the breadth and complexity of the human rights movement, including its engagement with law, politics and morals, in radically different cultures, this course is by its very nature multidisciplinary. Note: This course is cross-listed as HLS 363. Students may not get credit for both HLS 363 and POL 363.

POL 491 Internship in Political Science 1-4 Credits

Students work under supervision in a public agency, political party, or public interest group. A minimum of 52 hours of fieldwork per credit required, with regular reports and a concluding critique analyzing and evaluating the experience. Primarily for seniors and qualified juniors. No more than six credits allowed toward graduation.

Prerequisite(s): permission of instructor.

PSY 365 Drugs and Human Behavior 3 Credits

Presents the student with an in-depth analysis of the effects of alcohol and selected chemical substances on the behavior and body of the user. Commonly abused substances will be discussed in terms of their history, sources of production, routes of administration, distribution, metabolism and excretion, neurophysiology, tolerance, properties of addiction, withdrawal course and symptoms, and potential beneficial and harmful effects.

Prerequisite(s): PSY 100.

PSY 491 Internship in Psychology 1-4 Credits

Provides supervised work experience in an approved institution or agency in order for students to gain knowledge in applications of psychology. Placement is made in various community institutions and agencies that offer services to both exceptional and normal individuals.

Prerequisite(s): senior psychology majors or minors.

SOC 205 Families 3 Credits

Examines families in the United States, past and present, emphasizing the variety of family experiences in different social contexts and the relationship between family life and social change. Includes comparative material on families in other countries and considers possible alternatives to current family forms.

Prerequisite(s): SOC 101.

SOC 207 Racial and Ethnic Relations 3 Credits

Examines the social origins of prejudice and discrimination, and analyzes intergroup trends in conflict, competition, and cooperation. Considers issues of immigration, economic and political power, and ethnic, racial, and religious pluralism.

Prerequisite(s): SOC 101.

SOC 245 Social Problems 3 Credits

American social, economic, and political institutions and their interrelationships are analyzed, with an emphasis on the causes, directions, and consequences of social change in American society.

Prerequisite(s): SOC 101.

SOC 308 Cities And Suburbs 3 Credits

Examines the growth of an urban way of life under the influence of industrialism. Study of community, political, and economic institutions in cities. Comparisons between urban and suburban areas.

Prerequisite(s): SOC 101.

SOC 312 Women In Society 3 Credits

Examines changes in women's roles and in male-female relationships. Focuses on impact of law, economy and social movements in shaping women's positions as wives and as workers. Explores theories and evidence concerning the nature and extent of sex differences. Attention to women's socialization through language, schools and media.

Prerequisite(s): SOC 101.

SOC 330 Class and Economic Inequality 3 Credits

Social, economic, and political aspects of the division of society into classes are considered. Theories of stratification and the distribution of wealth, power, and prestige in societies past and present are examined.

Prerequisite(s): SOC 101.

SOC 350 Social Policy 3 Credits

Investigates the relationship between economic development and social policy in comparative and historical context. The main features of preindustrial, early industrial, and advanced industrial social welfare systems are described. Social, economic and political factors that shape social policy are investigated.

Prerequisite(s): SOC 101.

SOC 340 Power and Politics 3 Credits

Examines the nature and distribution of power in contemporary societies; analyzes the relationships between power and politics.

Prerequisite(s): SOC 101.

SOC 396 Applied Sociology 3 Credits

Shows how sociology can be applied in work settings. As participant observers in organizations related to their career objectives, students learn to apply sociological knowledge, perspectives, and skills. In class meetings and individual consultations with the instructor, students examine the applied dimensions of sociology, the uses of sociology in various occupations, the ethical issues involved in applied sociology, and the culture and structure of their work organization.

Prerequisite(s): SOC 101.

Entrepreneurial Studies (B.S.B.A.)

Program Overview

Rider entrepreneurial studies (ES) students develop the skills and know-how they need to become independent, innovative and informed entrepreneurs. Entrepreneurs look at the world differently, and see opportunity where others do not. The programs emphasize practical experience and holistic thinking, encourage students to develop their own business plan, and enhance analytical skills through experiential classes.

Entrepreneurs and small business are the engines for job creation and economic growth. Career opportunities for entrepreneurial students are as boundless as their creativity, imagination and work ethic. Many employers value students with an entrepreneurial attitude and their ability to think outside the box.

The ES program has two key learning objectives. First, encourage entrepreneurial thinking among students. This entails the ability to recognize, evaluate and pursue opportunities. Second, build professional skills relevant for starting and managing a new venture. These include

research, business planning, and understanding functional aspects of small business management and operations.

Curriculum Overview

Rider entrepreneurial studies students gain an education in business, plus the skills, attitude and experience needed to create new ventures or revitalize established businesses. They learn to identify and understand different types of start-up ventures, how to build and present business plans, and how to evaluate sources of financing for start-up and other types of ventures.

The program's interdisciplinary format offers the option of double majoring with another business discipline, such as management, marketing, finance, sports management, information systems, and others. Students also can choose the entrepreneurial studies concentration, a four-course program that is paired with a major in the College of Business Administration.

Major Requirements

ENT 348	Small Business Management	3
ENT 335	Small Business Tax Planning ¹	3
Select three of the following, at least one of which must be an ENT-prefixed course:		9
ENT 210	Sports Entrepreneurship	
BUS 210	Intro to Law: Contracts	
MKT 250	Retailing Management	
or MKT 320	Consumer Behavior	
ENT 260	Family Business Management	
MGT 310	Intro to Human Resource Mgmt	
or MGT 363	Management Skills	
CIS 325	User-Centered Design	
or CIS 340	Electronic Commerce	
ENT 350/FIN 350	Entrepreneurial Finance	
ENT 375	International Entrepreneurship	

ENT 420	Student Venture Experience	
ENT 444	Special Topics	
ENT 448	Small Business Consulting Sem	
ENT 490	Independent Study	
One integrative experiential course:		
ENT 410	New Venture Planning	3
Free Electives		27
Total Credits		120

¹ Accounting majors double majoring in Entrepreneurial Studies may substitute ACC 410 Fund of Federal Taxation for the ENT 335 requirement.

For graduation, students must achieve an overall 2.0 GPA in the major, with no course grade less than "C-".

Students are also encouraged to take ENT 491 Internship, ENT 399 Entrepreneurship Co-Op, and ENT 100 Intro to Entrepreneurship as free electives.

BUS 210 Intro to Law: Contracts 3 Credits

An introduction to the origin of current law, with emphasis on the development of business law, students are exposed to legal terminology and acquainted with the system of application of rules of law to actual situations. The laws of contracts, particularly common-law developments, are considered in great detail.

CIS 325 User-Centered Design 3 Credits

This course introduces students to the design and evaluation of interactive and internet-based devices and systems, including methods to understand user needs and requirements, design and prototype alternative systems, and evaluate system usability. Topics include interaction design, human factors, requirement gathering techniques, protocol analysis, usability testing, and heuristics evaluation.

Prerequisite(s): Junior standing.

CIS 340 Electronic Commerce 3 Credits

Students will learn about the broad range of Internet business technologies; develop the skills necessary to create and administer successful electronic commerce projects; and understand the associated benefits, and risks of electronic commerce business models.

Prerequisite(s): CIS 185.

ENT 210 Sports Entrepreneurship 3 Credits

Sports Entrepreneurship will introduce students to entrepreneurship in the sports industries as they explore opportunities and challenges for new ventures in this sector. Using an industry's business model, students will identify competitive advantages and understand what is required for startup success.

ENT 260 Family Business Management 3 Credits

This course is directed at understanding the family-owned and managed firm. Topics included are the strengths and weaknesses of a family firm, the dynamics of the family and business interactions, conflict resolution, succession planning and ownership transfer. The course will help individuals involved with a family firm, regardless if they are a family member.

Prerequisite(s): MGT 201 and junior standing.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

ENT 335 Small Business Tax Planning 3 Credits

This course provides an understanding of the key tax issues faced by small businesses and their business implications. It also familiarizes prospective business owners with various tax filing requirements so that they can use the expertise of tax professionals more effectively.

Prerequisite(s): ACC 210.

ENT 348 Small Business Management 3 Credits

The role of small business in the American economy is examined. Favorable practices, policies, functions, principles and procedures of and for the small business entrepreneur and owner-manager are studied. Includes learning a method to evaluate a new venture idea.

Prerequisite(s): MGT 201 or permission of instructor and junior standing.

ENT 350 Entrepreneurial Finance 3 Credits

This course covers the techniques for acquiring financial resources as a firm advances through successive business stages: seed, start-up, struggling, growing, and stable. In addition, it examines recent trends in credit markets and the latest financial innovations as they impact the process of financing the venture's growth.

Prerequisite(s): FIN 300.

ENT 375 International Entrepreneurship 3 Credits

Students will learn how new or small ventures enter international markets. Requirements include developing a case about starting or running a venture in a single country of the student's choice.

Prerequisite(s): MGT 201 and junior standing.

ENT 410 New Venture Planning 3 Credits

This course will require students to select a business and prepare a complete new venture plan for it. This plan would identify the product and its target market, analyze its market potential, choose the location, scale of operation, layout, staffing, type of financing, estimate the revenues and profits, and present the income statement, balance sheet, and the cash flow projections.

Prerequisite(s): ENT 348 or permission of instructor.

ENT 420 Student Venture Experience 3 Credits

Students will start and run a small business while under the supervision and guidance of faculty. Students will take a business plan developed through New Venture Planning (ENT 410) and execute it. Students will experience the launch process and learn, hands on, how to adapt to the marketplace. Some businesses started in this class may also be eligible for seed venture funding from Rider.

Prerequisite(s): ENT 348, ENT 410, and permission of instructor.

ENT 444 Special Topics 3 Credits

ENT 448 Small Business Consulting Sem 3 Credits

This course utilizes student teams to assist existing small businesses in solving problems or researching opportunities. Students will spend the majority of time in the field utilizing an experiential learning approach. Weekly activity logs, proposal development, and project completion are required. Restricted to seniors.

Prerequisite(s): ENT 348 and permission of instructor.

ENT 490 Independent Study 3-4 Credits

Topic to be approved by professor and program chairperson. Available to juniors and seniors.

MGT 363 Management Skills 3 Credits

The focus of this course is on specific skills necessary for success in a management role. These skills include leading, communicating effectively, delegating, conflict and time management and motivating others. Students will have opportunities to practice skills and to apply their knowledge to business cases.

Prerequisite(s): MGT 201 or permission of instructor.

MKT 250 Retailing Management 3 Credits

The principles underlying successful retailing are analyzed within the framework of the strategic-planning process. Topics covered include location, merchandise planning, customer service, image, atmosphere, layout, pricing, promotion, personnel and operations management.

Prerequisite(s): MKT 200.

MKT 320 Consumer Behavior 3 Credits

The nature and determinants of consumer behavior are studied, with attention given to the influence of socio-psychological factors such as personality, small groups, demographic variables, social class, and culture on the formation of consumer attitudes, consumption patterns, and purchasing behavior.

Prerequisite(s): MKT 200; Required for advertising majors.

Entrepreneurial Studies Concentration

Program Overview

The Entrepreneurial Studies concentration is an option for any business student desiring to focus on starting a new venture, or working in a small or family firm environment. The concentration must be taken with another major in the College of Business Administration.

Requirements

(12 credits)

The Entrepreneurial Studies concentration requires four business courses as outlined below (courses to be counted as either major or free electives):

The Entrepreneurial Studies concentration requires four business courses as outlined below (courses to be counted as either major or free electives):

Finance (B.S.B.A.)

Program Overview

Rider's finance program was designed to meet the various career goals of different students. Many fields require an understanding of both the process of making financial decisions and how those decisions will affect others. Rider's finance major combines a solid analytical foundation with broad coverage on how the financial system operates. Programs of study are structured to benefit students who will enter both finance and non-finance careers.

Rider finance majors have found careers regionally and around the world in business, industry, government service and the non-profit sector. Career paths of our finance graduates include portfolio manager, financial analyst, banker, insurance underwriter, financial planner, corporate financial manager, credit analyst, financial consultant and more.

Curriculum Overview

Our diversified program allows students to acquire finance and general business knowledge needed to compete in today's job market.

For example, Rider offers a Certificate in Investment Analysis Program (p. 65) that prepares students for a variety of careers in investments and corporate finance. The program also provides courses for students who plan to take the Chartered Financial Analysis (CFA) Level 1 Exam.

We also offer concentrations in Financial Management and Financial Services Marketing (p. 124). The Concentration in Financial Management (p. 124) provides preparation for students who wish to take the Certified Management Accounting (CMA) examinations. This certification can be very worthwhile for those who intend to enter careers in Corporate Finance/Accounting. The Concentration in Financial Services Marketing (p. 124) is designed for students interested in the many careers requiring knowledge of finance as well as strong marketing skills.

Non-business majors might find our Minor in Finance (p. 124) to be a worthwhile addition to their program. They can receive their non-

business degree and at the same time acquire considerable business knowledge and skills from our Finance minor (p. 35).

In short our flexible program allows students to customize their major to fit their individual career interests. They can choose from a variety of concentrations and electives. Courses offerings range from investment analysis and portfolio management to financial modeling and personal financial planning.

Major Requirements

FIN 307	Financial Markets & Institut	3
FIN 309	Intermediate Corporate Finance	3
FIN 312	Investments	3
Three upper level FIN electives (300-400 level), excluding FIN 491 Finance Internship and FIN 399 Finance Co-op.		9
Total Credits		18

For entry into the Finance major, students need at least a "C-" in FIN 220 Introduction to Finance.

Students must achieve a grade of at least "C-" in each of the major courses with a minimum GPA of 2.0 in the major.

Special Double Major Opportunities

The finance department believes that recognition and credit should be given to the significant amount of finance-related material that is included in the programs for accounting majors. As a result, students who are finance and accounting double majors can reduce the number of required finance courses from six to five. Details are available from the CBA Dean's office or from the chairperson of the finance department.

Requirements for the Minor

(Available to all non-business majors)

(18 credits)

ACC 210	Introduction to Accounting	3
ECO 201	Principles of Microeconomics	3
FIN 220	Introduction to Finance	3

FIN 200 Managing Your Money 3 Credits

An introduction to the analysis of a wide range of financial decisions which individuals encounter over their careers and lifetime. Topics include financial goals, tax planning, home ownership versus renting, consumer credit, money management and investments, and managing risk with insurance. This course is open to all Rider students, and it counts as a free elective or a business elective. It cannot be used as finance elective.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

FIN 305 Personal Financial Planning 3 Credits

This course focuses on practical issues and problems involving personal financial budgeting, use of credit, selection of banking services, insurance needs, real estate, investments, tax planning, and retirement planning. An important objective of the course is to provide the student with the tools that are utilized in making personal financial decisions and how to apply those tools for a variety of financial needs.

Prerequisite(s): FIN 220.

FIN 307 Financial Markets & Institut 3 Credits

This course provides an introduction to the organization and behavior of financial markets and institutions in the economy. The factors determining security prices and interest rates in the money and capital markets are analyzed. An overview of all major financial institutions is presented. In addition, market returns, the regulatory environment, and monetary policy are examined.

Prerequisite(s): ECO 200 and junior standing.

FIN 308 International Finance 3 Credits

Financial management in the international environment. Topics include balance of payments, foreign exchange markets, arbitrage, hedging of currency risk, country risk management, and the evaluation of foreign investment opportunities.

Prerequisite(s): FIN 220.

FIN 309 Intermediate Corporate Finance 3 Credits

This course builds on and extends the concepts of financial management learned in FIN 220. The course examines long-term corporate financing and investment decisions and how those decisions interface with each other. Topics covered include: cost of capital, financial planning and analysis, capital budgeting, capital structure and dividend policy.

Prerequisite(s): FIN 220.

FIN 312 Investments 3 Credits

The fundamentals of investing in stocks, bonds, and other negotiable instruments are covered. Major topics include trading on securities markets, mutual funds, international investing, margin accounts, short sales, determinants of securities prices, and investment risks. Stock options, financial futures, convertible securities, and implications of taxes on investment decisions are also discussed.

Prerequisite(s): FIN 220.

FIN 315 Financial Modeling 3 Credits

Provides instruction in computer use beyond what is available in other finance courses. Topics include more sophisticated applications of computers in financial management, investments, and other areas of finance and business. Students work on cases and projects which require more advanced usage of spreadsheets and other software and databases.

Prerequisite(s): CIS 185 and FIN 220.

FIN 330 Corporate Cash Management 3 Credits

This course is designed for business students seeking an understanding of modern principles and techniques for corporate treasury management. The course material is useful for finance, accounting, and banking professionals or small business owners. Topics include analysis of liquidity and solvency, credit and accounts receivable management, cash collection and disbursement systems, short-term investment and borrowing, management of treasury information and technology, multi-national cash management, and other related topics.

Prerequisite(s): FIN 220.

FIN 340 Risk Management 3 Credits

This course examines the risk management process as applied to the firm as a whole. It integrates the management of all risks facing the firm: strategic, financial, hazard, and operational. Techniques for identifying risk, measuring and analyzing it, and selecting an appropriate treatment will be explored.

Prerequisite(s): FIN 220.

FIN 350 Entrepreneurial Finance 3 Credits

This course covers the techniques for acquiring financial resources as a firm advances through successive business stages: seed, start-up, struggling, growing, and stable. In addition, it examines recent trends in credit markets and the latest financial innovations as they impact the process of financing the venture's growth.

Prerequisite(s): FIN 220.

FIN 360 Fixed Income and Derivatives 3 Credits

This course centers on the quantitative portion of the Chartered Financial Analyst (CFA) level 1 curriculum, which includes materials on fixed-income risk and return, fundamentals of risk analysis, derivative instruments and risk management applications of option strategies. The goal is to help students prepare for the exam, as well as introduce them to a variety of topics in finance.

Prerequisite(s): FIN 312.

FIN 370 Financial Analysis and Ethics 3 Credits

This course covers the topics of financial reporting and analysis and related ethical issues. The course would benefit students interested in augmenting their ability to understand, analyze and apply the information in financial statements. It provides essential knowledge for students seeking either the Certified Management Accountant (CMA) or Chartered Financial Analyst (CFA) certifications. Specifically, the course covers the Ethics and Professional Standards of the CFA curriculum, and materials on financial reporting quality and financial statement analysis. Course goals are to help students prepare for the certification exams, as well as introduce all interested students to a variety of topics in financial analysis and ethics.

Prerequisite(s): FIN 312 or POI.

FIN 380 Real Estate 3 Credits

Real estate finance and related subjects in real estate are examined. Topics include measuring cash flows and taxes, valuation methods for real estate investment decisions, location and value in real estate, home ownership, legal matters, and financing methods and techniques.

Prerequisite(s): FIN 220.

FIN 399 The Co-Operative Experience 6 Credits

The co-op program provides students with an opportunity to work full-time in a company and apply what they have learned in their finance and other business classes. It also enhances students' employment opportunities since many employers use a co-op program as a first step before they hire full-time employees. Eligible students include finance majors with at least junior status, a minimum overall GPA of 3.0, and a minimum GPA of 3.0 in any finance coursework completed prior to the submission of the co-op application. Co-op credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): FIN 220.

FIN 412 Investment Analysis 3 Credits

Real-world application of the concepts and techniques of investment analysis and portfolio theory introduced in FIN 312. Students interact with and make recommendations to professional portfolio managers. Topics include analysis and forecasts of business conditions, market interest rates, international opportunities, and corporate profits. Emphasis is placed on the valuation of securities, stock selection, investment timing, technical analysis, and management of portfolio risk with options, futures, and other tools.

Prerequisite(s): FIN 312 or permission of instructor.

FIN 469 Special Topics in Finance 3 Credits

This course is occasionally offered, with the topics and prerequisites set by the finance program.

FIN 490 Independent Research and Study 3 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation. This course can be used as a business or free elective, but with prior approval it can also be used as finance elective.

FIN 491 Finance Internship 1-3 Credits

The internship offers qualified junior and senior finance majors supervised employment with participating companies. The internship may be taken during the fall or spring semester or during the summer session. Students are evaluated periodically by senior staff members of the participating firms and are required to complete a term paper that will be reviewed by the major's internship director. Internship credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): permission of instructor.

Fraud and Business Forensics Certificate

A concentration in Fraud and Business Forensics consists of four courses that can be completed as part of the undergraduate Accounting or Information Systems program. The concentration prepares students for a career in the field of fraud investigation and forensics by providing skills and tools to both prevent fraud from occurring and discovering fraud after it has occurred.

(12 credits)

Required Courses

ACC 321	Internal Auditing	3
ACC 325	Fraud Examination and Business Forensics	3
ACC 450	Business Forensic Application	3
Select one of the following Tracks:		3

Accounting Track

ACC 320	Accounting Info Systems
or ACC 400	Principles of Auditing

Information Systems Track

CIS 370	Systems Analysis and Design Project
---------	-------------------------------------

Total Credits	12
---------------	----

Students must achieve a minimum 2.5 GPA in the coursework required for the concentration, with no grade lower than a "C" in any course in the concentration.

Admission

Current undergraduate College of Business Administration (CBA) students majoring in Accounting or Information Systems may choose a concentration on Fraud and Business Forensics. The concentration credit requirements are the same as the Concentration in Business Forensics. CBA students who want to declare this concentration through the CBA Undergraduate Academic Coordinator in the Dean's Office in Sweigart Hall a semester prior to beginning coursework.

The certificate program welcomes students who graduated from Rider or who are not presently enrolled and possess a bachelor's degree. A minimum GPA of 2.5 is required. Students who have completed a degree from Rider may complete a Re-enroll/Certificate Program application form through the College of Continuing Studies. Students who have not previously attended Rider may complete a College of Continuing Studies application form. Students who have completed a business degree other than Accounting or Information Systems or non-business degree must consult with a College of Continuing Studies advisor prior to enrolling.

General Business (Online) B.S.B.A.**Program Overview**

Rider's affordable **online degree program leading to the B.S. in Business Administration** offers working professionals the convenience and flexibility of completing their college degree online. This program is designed for motivated adult learners who have completed at least half of their studies toward a baccalaureate business degree (60 or more credits) or earned an associate's degree in business within the last 10 years.

Curriculum Overview

The General Business major requires completion of 18 credit hours of upper-level business courses across a variety of disciplines, including: economics, finance, management and marketing and more. For graduation students must achieve an overall GPA of 2.0 in the major.

Business Administration majors may not count more than six credit hours toward a second major, with the exception of International Business.

Degrees Offered

B.S.B.A in General Business

³ Social Sciences: AMS, COM, GND, HIS, LAW, MCS, POL, PSY, SOC, SOW

⁴ One international business course selected from legal issues & business ethics, economics, finance, management, or marketing department is required. It may be used as a business major, business elective, or free elective.

⁵ Choose from sciences, social sciences, or humanities.

Courses and Descriptions

ACC 210 Introduction to Accounting 3 Credits

This course provides an introduction to basic principles and methods of accounting essential to preparation, understanding and interpretation of financial statements. Topics include accounting for merchandising concerns, current assets, long-term assets, liabilities and equity accounts. A brief overview of internal control is also covered.

ACC 220 Managerial Uses of Accounting 3 Credits

This course provides an introduction to the use of accounting information in managerial decision-making. Topics include cost behavior, cost classifications, and problem-solving functions of accounting as they pertain to planning, control, evaluation of performance, special decisions, and budgeting. The interpretation of published financial statements and the statement of cash flow are also covered.

Prerequisite(s): ACC 210.

BUS 300 Social & Legal Environment Bus 3 Credits

The strategies by which organizations in the private as well as the public sectors interact with, adapt to, and attempt to influence their external environments are explored. The primary emphasis is on evaluating the effect of business and governmental decisions on the quality of life. The role of regulatory agencies and the impact of local and national legislation on organizational behavior are considered.

Prerequisite(s): 54 credits.

BUS 400 Strategic Mgmt and Policy 3 Credits

This capstone course for seniors in business administration provides a framework for problem identification, analysis, and decision making within the organization. Students are given the opportunity to integrate and apply previously acquired knowledge of accounting, decision sciences, economics, finance, marketing, management, and statistics. Case studies, critical incidents, and other appropriate techniques are utilized.

Prerequisite(s): 84 credits, CIS 185, ACC 210, ACC 220, MKT 200, MGT 201, FIN 300, MSD 340, BUS 300, CIS 485.

BUS 490 Independent Research and Study 3 Credits

BUS 491 Business Admin Internship 1-4 Credits

CIS 385 Management Information Systems 3 Credits

The course focuses on the management and use of information systems and technology for the strategic and operational advantage of the firm. Students explore the business value of information resources including current communication, database, as well as hardware and software technologies. GSC 385 can fulfill the CIS 385 requirement for all business majors. Please note: Students will not receive credit for both GSC 385 and CIS 385 without prior approval by the Dean's office.

Prerequisite(s): CIS 185 and junior or senior standing.

CIS 185 Information Systems Essentials 3 Credits

This course will enable students to use Microsoft Excel and Access to design and create complex applications to support effective decision making. Students will use Excel to design and create spreadsheets to support business analytics. Access will be used to understand, design, create, and utilize relational databases.

CMP 120 Expository Writing 3 Credits

Students will increase their competence in the critical reading of challenging college-level texts that engage significant ideas and in writing effective essays that advance a clear and meaningful thesis while demonstrating understanding of those texts. The second of the department's three-course composition sequence.

Prerequisite(s): Successfully completed CMP 115 or have attained a 530 or above on the writing section and 500 or above on the critical reading section of the SAT or a score of 4 or above on the English department placement test.

CMP 203 Literature and Composition 3 Credits

Students will write research papers and do library research through the use of literary materials. The course emphasizes increasing the comprehension of ideas and experiences by means of selected readings.

Prerequisite(s): CMP 203 is open to students who receive a grade of "A" or "B" in CMP 120; it may be used as a substitute for CMP 125.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

ECO 200 Principles of Macroeconomics 3 Credits

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 201 Principles of Microeconomics 3 Credits

Market price systems are analyzed. The nature and characteristics of consumer and producer behavior, the theory of pricing in competitive and noncompetitive markets, and determination of the distribution of output are re evaluated. Welfare, social control, monopoly, and income inequality are explored in the light of price theory. The role of the United States in the world economy is explored.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MSD 105 Quantitative Methods for Business 3 Credits

The aim of this introductory course is to acquaint students with a number of basic mathematical techniques that will enhance their ability to become effective decision-makers in a realistic business environment. Topics covered include linear equations and inequalities, linear programming, summation notation, geometric series, counting techniques, event probability and discrete random variables. Where appropriate, these tools will be illustrated with examples chosen from business settings.

Prerequisite(s): MSD 104 or a passing grade on the Math Placement Exam.

MSD 200 Statistical Methods I 3 Credits

This course is designed to give the student an understanding of continuous random variables, the elements of statistical inference, and an introduction to how these tools may be useful in one's attempt to reach intelligent conclusions in real-world settings. The focus is on the normal random variable, descriptive statistics, sampling distributions, and the frameworks of estimation and hypothesis testing, particularly as they apply to inference for unknown population means and proportions in the one- and two-sample settings.

Prerequisite(s): MSD 105 or equivalent.

MSD 201 Statistical Methods II 3 Credits

The sequel to Statistical Methods I is designed to prepare the student to be able to recognize a variety of additional common inferential scenarios, select and apply appropriate techniques in their analyses, and be aware of the usefulness of computer packages in performing certain relatively complicated statistical calculations. The course covers the one-way analysis of variance, Chi-square tests for non parametric inferences, and regression analysis. Students are expected to submit, for evaluation, the analysis of a real-world data set.

Prerequisite(s): MSD 200.

General Studies (A.A.)

Program Overview

This 60-credit program has been designed to provide both breadth and sufficient depth in the liberal arts at the associate degree (A.A.) level. Only 12 semester hours are allowed to be taken outside of Liberal Arts and Sciences.

Students whose long-range goal is a bachelor's degree should consult with an advisor in the College of Continuing Studies to determine the transferability of this program to one of the baccalaureate degrees offered by Rider.

Curriculum Overview

The flexible curriculum is designed to enable students to choose from a myriad of academic disciplines. Choosing an emphasis or concentrated area of study allows students to explore a specific discipline in depth.

Admissions Requirement

- Official transcripts from all institutions attended with a minimum 2.5 cumulative GPA

Degree Offered

- A.A. in General Studies

Emphasis

Students select a concentrated area of study from a liberal arts department. An appropriate introductory course from a department may be included. Students are encouraged to consult a CCS advisor to select an emphasis

Free Electives

Free elective hours may be taken in any department, provided the student meets the requirements imposed by the department offering the course.

Total Credits	60-62
---------------	-------

¹ LIB 200 is waived for students who transfer 30 or more credits in Liberal Arts.

² The quantitative skills requirement can be met by successfully completing one course in college-level mathematics or statistics. For students who don't transfer such a course to Rider, popular offerings include MTH 102 Finite Mathematics, MSD 104 Intro to Quantitative Methods, MSD 105 Quantitative Methods for Business, MSD 200 Statistical Methods I, MSD 201 Statistical Methods II, POL 230 Methods of Political Analysis, PSY 105 Introduction to Research in Psychology, PSY 201 Statistics and Research Design, and others.

³ Students who possess sufficient computer experience can gain credit for CIS 185 Information Systems Essentials through assessment (http://www.rider.edu/sites/default/files/docs/Credit_for_CIS_185.pdf).

LIB 200 Intro to Liberal Studies 3 Credits

Introduces students to the various perspectives and methods of the disciplines in liberal studies: natural and social sciences, humanities, and the arts. Students learn the multifaceted questions and answers offered by each discipline. They study the historical development of the university and the rise and transformation of liberal studies disciplines.

CMP 120 Expository Writing 3 Credits

Students will increase their competence in the critical reading of challenging college-level texts that engage significant ideas and in writing effective essays that advance a clear and meaningful thesis while demonstrating understanding of those texts. The second of the department's three-course composition sequence,

Prerequisite(s): Successfully completed CMP 115 or have attained a 530 or above on the writing section and 500 or above on the critical reading section of the SAT or a score of 4 or above on the English department placement test.

CMP 125 Research Writing 3 Credits

Introduces students to the process of library research and documented writing. Emphasis will be on the refinement of critical reading, thinking, and writing strategies applied to multiple sources and documented papers.

Prerequisite(s): CMP 120 or BHP 100.

COM 104 Speech Communication 3 Credits

Examines basic communication principles and strategies of public speaking. Various genres of oral communication are studied, with an emphasis on extemporaneous and impromptu forms of delivery. Students research, prepare, and deliver speeches that are then used as the focal point for the discussion of effective speaking and listening. A number of speeches are videotaped. Students who received credit for COM 104S may not take this course.

Human Resource Management (B.S.B.A.)

Program Overview

Human Resource Management (HRM) professionals perform many vital business activities in organizations. As both private and public sector organizations have become more concerned about such issues as legal compliance and ensuring employee work behaviors are aligned with strategic objectives, the demand for well-trained HRM professionals has increased greatly.

Practitioners in HRM are involved in a variety of important, interesting, and challenging activities. They establish and implement policies that affect such organizational functions as recruitment, selection, training and development, performance management, compensation and benefits.

Curriculum Overview

Courses in the program include Introduction to Human Resource Management, Introduction to Labor Relations, Employee Selection and Training, Employee Compensation Systems, Employee Engagement, Managing Workforce Diversity, Career Management, Team Management, Management Skills, and more.

Total Credits	120
----------------------	-----

¹ Human Resource Management majors have the option of completing MGT 355 Team Management or MGT 363 Management Skills for their major requirements as well as for their Leadership Elective requirement. If a student chooses to count MGT 355 or MGT 363 toward both the major requirement and the Leadership Elective, the student must complete 3 credits of free elective for graduation.

An average of "C" or better is required in the 18 semester credit hours required of the human resource management major. Majors are encouraged to take HRM 492 Internship in Human Res Mgt as a free elective.

HRM 312 Intro to Labor Relations 3 Credits

This course deals with the relationship of labor unions and management, the fundamentals of collective bargaining, and labor legislation. The structure and growth of unions as well as the relationships and problems that exist among private and public sector organizations, the labor force, and government are surveyed.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 313 Legal Aspects of Human Res Mgt 3 Credits

This course deals with the various laws that affect human resource management, including social insurance, legislation, minimum wage laws, OSHA, ERISA, as well as equal employment opportunity legislation. This course is concerned not only with the provisions of these laws, but also with their constitutionality, their effects, and how they are administered.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 315 Employee Selection & Training 3 Credits

This course explains the processes involved in selecting and training employees. With regards to selection, specific examples include, evaluating applicant credentials, administering pre-employment tests and complying with equal employment opportunity legislation. With regards to training, topics include assessing the need for training, designing effective training programs, utilizing methods such as technology to deliver training, and evaluating the effectiveness of training programs.

Prerequisite(s): MGT 310.

HRM 316 Employee Compensation Systems 3 Credits

The goal of this course is to familiarize you with the common methods of compensation used by today's organizations and how these methods could be used to increase motivation, job satisfaction, and performance in the workplace. To accomplish this, we will first discuss the bases of motivation in the workplace. Next, we will then talk about the various compensation options and techniques and the strengths and weaknesses of each in maximizing motivation and performance in an organization.

Prerequisite(s): MGT 310.

HRM 333 Employee Engagement 3 Credits

Employee Engagement is commonly described as a focused passion and enthusiasm that employees bring to their work that produces high-quality performance and positive organizational outcomes such as enhanced firm reputation, customer loyalty, and profitability. In this course, students will explore the concept and value of Employee Engagement, and strategies for energizing an organization's workforce. Projects and activities will focus on the role of the Human Resource function in measuring employee attitudes, designing relevant interventions, and influencing a culture of engagement.

Prerequisite(s): MGT 310.

HRM 441 Sel. Topics: Human Res Mgt 3 Credits

Deals with one area of study in the field of human resource management such as protective labor legislation, mediation and arbitration, the administration of labor unions, or case problems in human resource management. The topic varies each semester and is announced at the time of registration.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or HRM major elective.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 491 Internship 1-4 Credits

Provides the student with the opportunity to supplement and apply human resource management coursework in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing work experiences. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): Junior or Senior; Major in human resource management and MGT 310; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

HRM 492 Internship in Human Res Mgt 3 Credits

Provides the student with the opportunity to supplement and apply their human resource management classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions. 2.75 GPA overall and 3.0 GPA in the major is required.

Prerequisite(s): major in human resource management or management and leadership, and MGT 310; senior status; and permission of instructor.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 320 Managing Workforce Diversity 3 Credits

Demographic shifts, changing patterns of labor force participation, global competition, and a growing cultural emphasis on the celebration of difference have all contributed to the creation of diversity as a hot topic in management. This course explores the opportunities and challenges of the increasingly diverse workforce emerging in the United States today. We will address the knowledge and skills managers must develop in working with others who are different from themselves. Some of these differences are obvious- gender, race, age, and physical characteristics. Other differences are not as easily observed - family structure, educational level, social class, and sexual orientation. This class incorporates experiential learning techniques for personal growth.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 336 Career Management 3 Credits

How careers are shaped by individual needs and experience and assisted by organization systems and practices is the focus of this course. The meaning of work and the development of careers are discussed, and students undertake self-assessment for the purpose of career planning. Careers are examined in the context of important changes occurring today in the world of work. The impact of the executive, organizational counselors and trainers, and the educational system upon the development of human potential is examined, along with the techniques for human resource planning and development.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 346 Negotiation 3 Credits

The purpose of this course is first, to explore the major concepts and theories behind effective negotiating practices and second, to develop negotiating skills applicable to a wide range of contexts. A knowledge of negotiation is a crucial requirement for anyone interested in a business career since it is a common mechanism for implementing change and for resolving conflict in the workplace. Topics will include two-party negotiations, power and politics, mediation, arbitration, and collective bargaining. A variety of teaching techniques will be used including readings, discussion, and role-playing.

Prerequisite(s): MGT 201 or permission of the instructor.

MGT 355 Team Management 3 Credits

This course prepares students to work in organizations that use teams as an integral part of their functioning-an increasingly common practice. The class involves intensive group interaction, focusing on individual growth in group settings. Working with other students in role-plays, exercises, and team assignments allows the student to develop better communication and leadership skills.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 363 Management Skills 3 Credits

The focus of this course is on specific skills necessary for success in a management role. These skills include leading, communicating effectively, delegating, conflict and time management and motivating others. Students will have opportunities to practice skills and to apply their knowledge to business cases.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 375 International Management 3 Credits

This course explores the ways in which culture impacts management practices and organizational behavior and dynamics. Topics include cross cultural communication, expatriate selection and training, leading and motivating cross cultural teams, developing organizational strategies to compete in a global market place, international business ethics, and current topics.

Prerequisite(s): MGT 201.

MGT 421 Sel Topics:Mgt & Organztn Behv 3 Credits

The seminar focuses on an area of study announced at the time of registration (students should check the registration material). Examples of possible topics are: leadership, motivation, and organizational behavior research. Prerequisites vary according to the topic and are listed in the registration material.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 448 Sem Small Bus Consul 3 Credits

This course utilizes student teams to assist existing small businesses in solving problems or researching opportunities. Students will spend the majority of time in the field utilizing an experiential learning approach. Weekly activity logs, proposal development, and project completion are required. Restricted to seniors.

Prerequisite(s): ENT 348 and permission of instructor.

MGT 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or MGT major elective.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 491 Intern Management/Org Behavior 3 Credits

Provides the student with the opportunity to supplement and apply their management and leadership classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): major in management and leadership or human resource management and MGT 363, or senior status; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

Information Systems (B.S.B.A.)

Program Overview

Students with a major in information systems develop a solid understanding of the use, design, development, and management of information systems and information technology. Rider's information systems courses are designed to give students the opportunity to develop and manage a variety of projects that can be applied to real business settings immediately.

Increasingly, organizations that seek individuals with an information systems specialization expect excellent organizational, along with communication and interpersonal skills and excellent analytical skills. All information systems students are encouraged to participate in a full semester co-op or summer internship experiences during their junior year.

Curriculum Overview

The required freshman-level information systems core course trains student to apply practical knowledge in their use of computer-based productivity tools. Core courses also allow students to demonstrate an understanding of enterprise integration applications such as SAP R/3, and also explains the value of electronically integrating the major functional areas of an organization in order to facilitate more effective management decision-making.

Students demonstrate an understanding of the enabling information technologies (IT) that organizations worldwide use to develop and sustain a strategic and competitive position in the marketplace. Students also demonstrate knowledge about the benefits and drawbacks of adopting and using these information technologies.

Students with a major or a minor in information systems will be able to demonstrate their understanding of information technology by applying their technical knowledge and skills to provide a practical solution to a business problem, business need or business opportunity.

¹ Permission of instructor required

CIS 185 Information Systems Essentials 3 Credits

This course will enable students to use Microsoft Excel and Access to design and create complex applications to support effective decision making. Students will use Excel to design and create spreadsheets to support business analytics. Access will be used to understand, design, create, and utilize relational databases.

CIS 200 Web Application Development I 3 Credits

In the early 1990s, Tim Berners-Lee created a set of technologies to allow information sharing at the CERN particle accelerator in Europe. These technologies dramatically changed the face of computing and became what we know today as the Web. Understanding how to develop and manage applications for the Web is a requirement for the information system professional. Because of the ease of development, deployment, maintenance and general scalability of Web applications, this approach to building and managing applications has become the de facto standard for business application development. This class will examine Web application development in detail. Through a combination of lecture and labs, students will learn the architecture of Web applications, how to develop Web pages using HTML and CCS, how to control user interaction with those pages using the JavaScript programming language. The programming basics of variable declaration and usage, program flow of control, function declaration and calling, and object usage and declaration will also be shown. The use of the JQuery Javascript library to ease the development of Web pages will also be shown.

CIS 220 Web Application Development II 3 Credits

In the early 1990s, a set of network technologies was combined to create a platform for application development. These technologies are now referred to as the Web. Because of the ease of development, deployment, maintenance, and scalability of Web applications, this approach to building and managing applications has become the de facto standard for business application development. Understanding how to develop and manage applications for the Web is vital for information systems professionals. This class will examine Web application development in detail. Through a combination of lecture and labs, students will learn the architecture of Web applications, how to develop Web pages using the Hypertext Markup Language (HTML) and Cascading Style Sheets (CSS), and managing user interaction in those pages using the JavaScript programming language. The process of creating dynamic web pages using the PHP programming language on the Web server will also be taught.

Prerequisite(s): CIS 200.

CIS 255 Into to Game Design & Development 3 Credits

The basic concepts, logic, techniques, tools, and vocabulary associated with interactive, digital game and simulation development will be explored through a combination of lectures, discussions, and hands-on learning. Knowledge and skills derived can be applied to a wide variety of business and other organizational settings globally for interactive simulations, games, and education.

CIS 260 Business Graphics 3 Credits

Basic color theory, typography, and page/slide layout are presented. Students utilize presentation, word processing and photo editing applications to create and edit various documents through hands-on labs and projects.

Prerequisite(s): CIS 185 or permission of instructor.

CIS 270 Networking and Telecommunications 3 Credits

This course provides an introduction to business data communications and networking. The Internet and OSI models are discussed. Network technologies include local area networks, backbone, wide area networks, and the Internet. Introduction to network design, security, and network management are also provided.

Prerequisite(s): CIS 185.

CIS 300 Object-Oriented Programming 3 Credits

Students will learn the basic concepts of object-oriented programming as contrasted with traditionally structured programming and will develop applications using the Java programming language.

Prerequisite(s): CIS 200.

CIS 309 Data Structures & Cmptr Archit 3 Credits

An introduction to linked lists, stacks, queues, trees, pointers, and sorting and searching algorithms. Students will learn the technical details of data storage and manipulation along with the concepts of program execution, and will use tools such as hex-editors and debuggers.

Prerequisite(s): CIS 185 or permission of instructor.

CIS 315 Integrated Business with SAP 3 Credits

This course provides an introduction to enterprise resource planning (ERP) systems and addresses how integrated information systems improve business operations. Students will learn about functional business areas and business processes, and understand the problems inherent in un-integrated enterprise information systems. Using SAP software and case studies, students will learn how ERP systems are being used to facilitate integrated, real-time management decision making.

Prerequisite(s): CIS 185 and ACC 210.

CIS 319 Computer Forensics 3 Credits

Students will use computers to obtain and analyze evidence found on storage devices such as those confiscated under warrant, and learn how to trace digital activities. Criminal and investigative procedures will be explored in depth.

Prerequisite(s): CIS 185.

CIS 320 Cloud Computing Administration 3 Credits

Students will learn the process of creating or provisioning a cloud computing environment. Content will include the provisioning of operating system resources in a cloud environment, operating system installation, configuration and maintenance. Virtualization, the process of creating multiple operating system environments on a single piece of hardware will be covered in some detail. Troubleshooting problems in the virtualization environment and in the operating system environment will also be covered. Hands-on labs will be used throughout. Both Windows and Linux operating systems will be used.

Prerequisites: CIS 185.

CIS 325 User-Centered Design 3 Credits

This course introduces students to the design and evaluation of interactive and internet-based devices and systems, including methods to understand user needs and requirements, design and prototype alternative systems, and evaluate system usability. Topics include interaction design, human factors, requirement gathering techniques, protocol analysis, usability testing, and heuristics evaluation.

Prerequisite(s): Junior standing.

CIS 330 Database Management 3 Credits

This course involves the study of computer databases. Major topics include relational databases, use of the structured query language (SQL) to query relational databases, and design and maintenance of relational databases.

Prerequisite(s): CIS 185.

CIS 340 Electronic Commerce 3 Credits

Students will learn about the broad range of Internet business technologies; develop the skills necessary to create and administer successful electronic commerce projects; and understand the associated benefits, and risks of electronic commerce business models.

Prerequisite(s): CIS 185.

CIS 350 Practical Business Analytics with Excel 3 Credits

CIS 350 – Practical Business Analytics with Excel is a required course for the proposed Business Analytics minor. This course will provide the student with an opportunity to gain proficiency in analyzing and visualizing data using Excel. The learning experience includes not only classic tools, such as pivot tables and VLOOKUP, but also more advanced Excel data tools such as building Excel data models, creating data mash ups, and using the Power Pivot add-in. The course also requires students to complete a data analysis project along with a presentation about the business insights drawn from the data analysis results. The project requires students to understand the business problem, identify and apply the appropriate analytic and visualization tools, and communicate the insight in an intuitive and effective manner.

Prerequisite(s): CIS 185, MSD 200 & MSD 201.

CIS 360 Data Mining 3 Credits

This course deals with modern technologies for data analysis. Hands-on exercises for data retrieval, data visualization and predictive analytics will be carried out using up-to-date methodologies and software tools. The full data mining life cycle will be covered from recognizing business problems and opportunities amenable to data mining analysis through deploying and monitoring solutions.

Prerequisite(s): CIS 185.

CIS 370 Systems Analysis and Design Project 3 Credits

Topics include modeling techniques and methodologies to address the planning, analysis, design, and implementation of high quality systems, delivered on time and within budget. Using rapid application development tools, students will also construct an operational system within the span of a single semester. Issues and tools related to the management of project teams are also discussed.

Prerequisite(s): CIS 330.

CIS 375 Adv. Sem in Global Outsourcing 3 Credits

The course is aimed at generating a comprehensive understanding of the emergent domain of global business process outsourcing. Various referred to as knowledge process outsourcing, IT-enabled services outsourcing, and business services outsourcing, the industry has seen enormous growth over the last decade and continues to grow. India commands the single largest share of this market but South Africa, Eastern Europe, Philippines, Morocco and Egypt have all emerged as other contenders in this global sector. The course is divided into four modules: the political economy of global outsourcing, process modeling, outsourcing management, and industry analysis. Please note: Students will not receive credit for both CIS 375 and GSC 375.

Prerequisite(s): junior standing.

CIS 385 Management Information Systems 3 Credits

The course focuses on the management and use of information systems and technology for the strategic and operational advantage of the firm. Students explore the business value of information resources including current communication, database, as well as hardware and software technologies. GSC 385 can fulfill the CIS 385 requirement for all business majors. Please note: Students will not receive credit for both GSC 385 and CIS 385 without prior approval by the Dean's office.

Prerequisite(s): CIS 185 and junior or senior standing.

CIS 390 Project Management 3 Credits

This course introduces students to general project management, the process of organizing resources to achieve business goals. Topics include the identification, approval, analysis, and general management of complex business projects. Project management tools, reports, techniques, and approaches will be covered.

Prerequisite(s): CIS 185.

CIS 399 The Co-Operative Experience 6 Credits

The co-op program provides students with an opportunity to work full-time in a company and apply what they have learned in their computer information systems and other business classes. It also enhances students' employment opportunities since many employers use a co-op program as a first step before they hire full-time employees. Eligible students include junior computer information systems majors with a minimum overall GPA of 3.0, and a minimum GPA of 3.0 in any computer information systems coursework completed prior to submission of the co-op application. Three of the co-op credits can be applied toward the computer information systems major, and three credits can be applied toward business or free elective requirements. Grading is on a pass/fail basis.

Prerequisite(s): Completion of two of the three courses: CIS 200, CIS 270, and CIS330.

CIS 410 Selected Topics in Information Systems 3 Credits

Information and communication technologies are evolving rapidly and continually. The Special Topics course facilitates the exploration of a selected topic (or combination of topics) that represents a recent technological advance with important and direct implications in the field of computer information systems. Current research, readings, lectures, discussions and/or hands-on computer experience or other appropriate measures will be employed to stimulate student learning.

Prerequisite(s): to be determined by instructor.

CIS 420 Enterprise Security 3 Credits

This course introduces students to computer security. Coverage includes hardware, software, and network security issues. Through hands-on labs students will learn how computer systems can be comprised and how computer professionals can prevent and provide counterattacks for security intrusions.

Prerequisite(s): CIS 270 or permission of instructor.

CIS 430 Enterprise Integration 3 Credits

The major focus of this course includes the forces driving enterprise integration as well as the management decisions associated with the design and implementation of enterprise systems. Students will use SAP ERP extensively to configure, build, test, and implement an enterprise system for a real business environment from the ground up.

Prerequisite(s): CIS 315.

CIS 490 Independent Research and Study 1-4 Credits

Topic to be approved by professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation.

Prerequisite(s): permission of instructor.

CIS 491 Computer Information Systems Internship 3 Credits

This is an honors course that provides the student with approximately two months of supervised employment with participating companies. Students are given a variety of information technology experiences. They are required to complete a term paper and/or to make an oral presentation to the faculty. Grading is on a pass/fail basis.

Prerequisite(s): permission of instructor.

Liberal Studies (B.A.)

Program Overview

This degree program enables students, through a variety of learning experiences, to consider life in the contemporary world. The curriculum provides for development of writing, speaking, quantitative, and critical thinking skills and exposes students to bodies of knowledge shared by educated persons. Offered for adult students enrolled in CCS, the program provides an opportunity for students to share common learning experiences and to develop personal plans of study for career advancement, personal growth and graduate study.

Curriculum Overview

The Liberal Studies major provides students with a flexible curriculum whose goal is to further the personal interests and professional objectives of adult students. In addition to the Concentrations offered, students may propose concentrations of individual design (which must be approved by the faculty committee on individual study and a CCS advisor).

- Sociology (p. 399)

Core Requirements

See Core Requirements (p. 161)		48-50
Liberal Studies Core		6
LIB 200	Intro to Liberal Studies ¹	
LIB 400	Seminar in Liberal Studies	
Liberal Studies Concentration		36

Choose from Humanities, Social Science, Applied Social Science, Applied Social Science with Business Studies Emphasis, Applied Social Science with Health Administration Emphasis, Global Studies, Law and Justice, Natural Science (p. 137)

Free Electives	28-30
Total Credits	120

A candidate for graduation must complete a minimum of 120 credits. Of the required 120 credits, 36 must be in upper-level courses, as determined by the respective departments, including three credits from the liberal studies core and 18 from the concentration. A maximum of 30 credits from outside the arts and sciences may be presented for graduation.

- ¹ LIB 200 is waived for students who transfer 30 or more credits in Liberal Arts.
- ² The quantitative skills requirement can be met by successfully completing one course in college-level mathematics or statistics. For students who don't transfer such a course to Rider, popular offerings include MTH 102 Finite Mathematics, MSD 104 Intro to Quantitative Methods, MSD 105 Quantitative Methods for Business, MSD 200 Statistical Methods I, MSD 201 Statistical Methods II, POL 230 Methods of Political Analysis, PSY 105 Introduction to Research in Psychology, PSY 201 Statistics and Research Design, and others.
- ³ Students who possess sufficient computer experience can gain credit for CIS 185 Information Systems Essentials through assessment (http://www.rider.edu/sites/default/files/docs/Credit_for_CIS_185.pdf).

LIB 200 Intro to Liberal Studies 3 Credits

Introduces students to the various perspectives and methods of the disciplines in liberal studies: natural and social sciences, humanities, and the arts. Students learn the multifaceted questions and answers offered by each discipline. They study the historical development of the university and the rise and transformation of liberal studies disciplines.

LIB 400 Seminar in Liberal Studies 3 Credits

A critical examination of the tradition of Western humanism and the way it has been transmitted through liberal arts education. Deals with a variable set of permanent problems in humanistic debate and learning e.g., specialization, the need for unifying theories of knowledge, the purpose of history, the place of intellectual life in mass society, the meaning of freedom, the modern problem of alienation, the responsibilities of the university, etc. Emphasis on why and how such problems have been addressed rather than any presumptive solutions.

LIB 490 Independent & Supervised Study 1-4 Credits

Independent and Supervised Study is available to CCS students for special study projects. Students must have completed a minimum of 45 credits applicable to a Rider degree and a minimum of 12 credit hours at Rider with a GPA of 2.5 or better. Each project may be taken for one-four credits and a maximum of six credits may be applied to the associate degree, 12 credits to the bachelor degree.

Areas of Concentration

For the Bachelor of Science in Liberal Studies, students choose one of the following concentration areas:

- Applied Social Science (p.)
- Applied Social Science Concentration with Business Studies Emphasis (p.)
- Applied Social Science Concentration with Health Administration Emphasis (p.)

- Global Studies (p. 139)
- Humanities (p. 137)
- Law and Justice (p.)
- Natural Science (p.)
- Natural Science Concentration with Health Administration Emphasis (p.)
- Social Science (p.)

Management and Leadership (B.S.B.A.)**Program Overview**

The manager's job is fast-paced and requires the ability to make decisions and facilitate the work of others. The management and leadership major gives students the knowledge and skills they need to compete in a rapidly changing global marketplace. Firms of all sizes and in all fields need good managers who know how to motivate subordinates, manage teams, resolve conflicts, and lead by example. Businesses want new employees who can handle themselves as subordinates, supervisors, and team members. Whether students are looking for a position with a medium to large organization or thinking of starting companies of their own, the management and leadership major provides the knowledge and skills they will need to be successful.

Curriculum Overview

Courses in the program include Team Management, Management Skills, Introduction to Human Resource Management, Managing Workforce Diversity, Career Management, Small Business Management, Negotiation, International Management, and more.

Total Credits 120

¹ Management majors have the option of completing MGT 355 Team Management or MGT 363 Management Skills for their major requirements as well as for their Leadership Elective requirement. If a student chooses to count MGT 355 or MGT 363 toward both the major requirement and the Leadership Elective, the student must complete 3 credits of free elective for graduation.

Notes:

- An average grade of "C" or better is required in the 18 semester credit hours that are required for the management and leadership major. Majors are encouraged to take MGT 491 Intern Management/Org Behavior as a free elective.

ENT 348 Small Business Management 3 Credits

The role of small business in the American economy is examined. Favorable practices, policies, functions, principles and procedures of and for the small business entrepreneur and owner-manager are studied. Includes learning a method to evaluate a new venture idea.

Prerequisite(s): MGT 201 or permission of instructor and junior standing.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 320 Managing Workforce Diversity 3 Credits

Demographic shifts, changing patterns of labor force participation, global competition, and a growing cultural emphasis on the celebration of difference have all contributed to the creation of diversity as a hot topic in management. This course explores the opportunities and challenges of the increasingly diverse workforce emerging in the United States today. We will address the knowledge and skills managers must develop in working with others who are different from themselves. Some of these differences are obvious- gender, race, age, and physical characteristics. Other differences are not as easily observed - family structure, educational level, social class, and sexual orientation. This class incorporates experiential learning techniques for personal growth.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 336 Career Management 3 Credits

How careers are shaped by individual needs and experience and assisted by organization systems and practices is the focus of this course. The meaning of work and the development of careers are discussed, and students undertake self-assessment for the purpose of career planning. Careers are examined in the context of important changes occurring today in the world of work. The impact of the executive, organizational counselors and trainers, and the educational system upon the development of human potential is examined, along with the techniques for human resource planning and development.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 346 Negotiation 3 Credits

The purpose of this course is first, to explore the major concepts and theories behind effective negotiating practices and second, to develop negotiating skills applicable to a wide range of contexts. A knowledge of negotiation is a crucial requirement for anyone interested in a business career since it is a common mechanism for implementing change and for resolving conflict in the workplace. Topics will include two-party negotiations, power and politics, mediation, arbitration, and collective bargaining. A variety of teaching techniques will be used including readings, discussion, and role-playing.

Prerequisite(s): MGT 201 or permission of the instructor.

MGT 355 Team Management 3 Credits

This course prepares students to work in organizations that use teams as an integral part of their functioning-an increasingly common practice. The class involves intensive group interaction, focusing on individual growth in group settings. Working with other students in role-plays, exercises, and team assignments allows the student to develop better communication and leadership skills.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 363 Management Skills 3 Credits

The focus of this course is on specific skills necessary for success in a management role. These skills include leading, communicating effectively, delegating, conflict and time management and motivating others. Students will have opportunities to practice skills and to apply their knowledge to business cases.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 375 International Management 3 Credits

This course explores the ways in which culture impacts management practices and organizational behavior and dynamics. Topics include cross cultural communication, expatriate selection and training, leading and motivating cross cultural teams, developing organizational strategies to compete in a global market place, international business ethics, and current topics.

Prerequisite(s): MGT 201.

MGT 421 Sel Topics:Mgt & Organztn Behv 3 Credits

The seminar focuses on an area of study announced at the time of registration (students should check the registration material). Examples of possible topics are: leadership, motivation, and organizational behavior research. Prerequisites vary according to the topic and are listed in the registration material.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 448 Sem Small Bus Consul 3 Credits

This course utilizes student teams to assist existing small businesses in solving problems or researching opportunities. Students will spend the majority of time in the field utilizing an experiential learning approach. Weekly activity logs, proposal development, and project completion are required. Restricted to seniors.

Prerequisite(s): ENT 348 and permission of instructor.

MGT 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or MGT major elective.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 491 Intern Management/Org Behavior 3 Credits

Provides the student with the opportunity to supplement and apply their management and leadership classroom work in a supervised employment setting with participating companies. Requirements include a journal with a log of daily activities and a paper summarizing their experiences submitted to the internship supervisor. Students will receive a letter grade based upon their internship performance, as well as their performance on the journal and final paper submissions.

Prerequisite(s): major in management and leadership or human resource management and MGT 363, or senior status; Requires a 2.75 GPA overall and 3.0 GPA in the major and permission of the instructor.

Management and Leadership/Human Resource Management Double Major (B.S.B.A.)

Program Overview

Rider's management and leadership major gives students the knowledge and skills they need to compete in a rapidly changing global marketplace. Whether students are looking for a position with a medium to large organization or thinking of starting companies of their own, the

management and leadership major provides the knowledge and skills they will need to be successful.

Human Resource Management (HRM) professionals are vital to organizations. With private and public-sector organizations becoming more concerned with issues such as legal compliance, corporate culture and ensuring employee work behaviors are aligned with strategic objectives, the demand for well-trained HRM professionals is constantly growing. They establish and implement policies that affect such organizational functions as recruitment, selection, training and development, performance management, compensation and benefits.

Curriculum Overview

Management and Leadership

Rider's management and leadership major opens the possibility of becoming a manager and leader in any industry or field. Businesses want their new employees to handle themselves as subordinates, supervisors and team members. Our management and leadership major provides hands-on training in these people skills. The major also provides students with a comprehensive understanding of management theories, so that students don't have to learn what works and what doesn't by trial-and-error on the job.

Human Resource Management

Human resource management professionals establish and implement policies that influence recruitment, selection, training and development of new employees. They also work in areas of development, performance management, compensation, and benefits. HRM professionals may be involved with human resource planning, job design and developing and implementing strategy.

The department majors are valuable for students who want to pursue graduate studies in HRM, management, law and psychology. The majors may be taken alone, together or in combination with another major offered by the College of Business Administration.

ENT 348 Small Business Management 3 Credits

The role of small business in the American economy is examined. Favorable practices, policies, functions, principles and procedures of and for the small business entrepreneur and owner-manager are studied. Includes learning a method to evaluate a new venture idea.

Prerequisite(s): MGT 201 or permission of instructor and junior standing.

HRM 312 Intro to Labor Relations 3 Credits

This course deals with the relationship of labor unions and management, the fundamentals of collective bargaining, and labor legislation. The structure and growth of unions as well as the relationships and problems that exist among private and public sector organizations, the labor force, and government are surveyed.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 315 Employee Selection & Training 3 Credits

This course explains the processes involved in selecting and training employees. With regards to selection, specific examples include, evaluating applicant credentials, administering pre-employment tests and complying with equal employment opportunity legislation. With regards to training, topics include assessing the need for training, designing effective training programs, utilizing methods such as technology to deliver training, and evaluating the effectiveness of training programs.

Prerequisite(s): MGT 310.

HRM 333 Employee Engagement 3 Credits

Employee Engagement is commonly described as a focused passion and enthusiasm that employees bring to their work that produces high-quality performance and positive organizational outcomes such as enhanced firm reputation, customer loyalty, and profitability. In this course, students will explore the concept and value of Employee Engagement, and strategies for energizing an organization's workforce. Projects and activities will focus on the role of the Human Resource function in measuring employee attitudes, designing relevant interventions, and influencing a culture of engagement.

Prerequisite(s): MGT 310.

HRM 316 Employee Compensation Systems 3 Credits

The goal of this course is to familiarize you with the common methods of compensation used by today's organizations and how these methods could be used to increase motivation, job satisfaction, and performance in the workplace. To accomplish this, we will first discuss the bases of motivation in the workplace. Next, we will then talk about the various compensation options and techniques and the strengths and weaknesses of each in maximizing motivation and performance in an organization.

Prerequisite(s): MGT 310.

HRM 441 Sel. Topics: Human Res Mgt 3 Credits

Deals with one area of study in the field of human resource management such as protective labor legislation, mediation and arbitration, the administration of labor unions, or case problems in human resource management. The topic varies each semester and is announced at the time of registration.

Prerequisite(s): MGT 310 or permission of instructor.

HRM 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or HRM major elective.

Prerequisite(s): MGT 310 or permission of instructor.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 320 Managing Workforce Diversity 3 Credits

Demographic shifts, changing patterns of labor force participation, global competition, and a growing cultural emphasis on the celebration of difference have all contributed to the creation of diversity as a hot topic in management. This course explores the opportunities and challenges of the increasingly diverse workforce emerging in the United States today. We will address the knowledge and skills managers must develop in working with others who are different from themselves.

Some of these differences are obvious- gender, race, age, and physical characteristics. Other differences are not as easily observed - family structure, educational level, social class, and sexual orientation. This class incorporates experiential learning techniques for personal growth.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 336 Career Management 3 Credits

How careers are shaped by individual needs and experience and assisted by organization systems and practices is the focus of this course.

The meaning of work and the development of careers are discussed, and students undertake self-assessment for the purpose of career planning. Careers are examined in the context of important changes occurring today in the world of work. The impact of the executive, organizational counselors and trainers, and the educational system upon the development of human potential is examined, along with the techniques for human resource planning and development.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 346 Negotiation 3 Credits

The purpose of this course is first, to explore the major concepts and theories behind effective negotiating practices and second, to develop negotiating skills applicable to a wide range of contexts. A knowledge of negotiation is a crucial requirement for anyone interested in a business career since it is a common mechanism for implementing change and for resolving conflict in the workplace. Prerequisite(s): MGT 201 or permission of instructor.

MGT 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or MGT major elective.

Prerequisite(s): MGT 201 or permission of instructor.

Marketing (B.S.B.A.)

Program Overview

A degree in marketing provides students with the knowledge they need to compete in today's global marketplace. Graduates from the marketing program enter the workforce with a strong background in business, a critical understanding of consumer behavior, ad trends and the know-how needed to reach target audiences and to promote services and products.

Curriculum Overview

Students who major in marketing at Rider are prepared for a broad array of careers in such fields as sales, retailing, promotion, distribution, customer service, marketing research and others.

Possible employment opportunities can be found with profit and non-profit and public or private organizations marketing goods or services to consumers, businesses or other organizations.

MKT 469	Selected Topics in Marketing	
Free Electives		27
Total Credits		120

¹ Students cannot receive credit for both MKT 375 Digital Advertising and Social Media and MKT 370 Internet Marketing.

Students interested in retailing usually choose MKT 250 Retailing Management, MKT 320 Consumer Behavior, and MKT 440 Sales Management.

Students interested in business-to-business marketing usually choose MKT 310 Business to Business Marketing, MKT 340 Personal Selling, and MKT 440 Sales Management.

Students interested in marketing research usually choose MKT 320 Consumer Behavior and MKT 366 Marketing Research.

For graduation, students must achieve an overall GPA of 2.0 or higher in the major, with no course grade less than "C-". Majors are encouraged to take additional marketing and advertising courses to satisfy free elective requirements.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MKT 205 Advertising Principles 3 Credits

Basic theory, functions, principles, and applications of advertising are the focus of this course. The relation of advertising to our economy, the advertising department and the ad agency, selection of media, advertising practices, and the use of research to improve advertising techniques are covered.

Prerequisite: MKT 200. Required for advertising majors.

MKT 250 Retailing Management 3 Credits

The principles underlying successful retailing are analyzed within the framework of the strategic-planning process. Topics covered include location, merchandise planning, customer service, image, atmosphere, layout, pricing, promotion, personnel and operations management.

Prerequisite(s): MKT 200.

MKT 260 Service Marketing 3 Credits

Focuses on the unique challenges of managing services and delivering quality service to customers. Emphasis is placed on the total organization, and how effective marketing and customer focus must be coordinated across multiple functions. The course is applicable to service organizations and to organizations that depend on service excellence for competitive advantage. Topics include customer-focused management, and customer satisfaction, retention, lifetime value and profitability. Students will learn to map services, understand customer expectations, and develop relationship marketing strategies.

Prerequisite(s): MKT 200.

MKT 280 Sports Marketing 3 Credits

The course focuses on the unique challenges of marketing sports at a variety of levels: youth, college, professional, and international. The challenges of attracting and retaining fans and participants as well as of building and maintaining strong brand identity are at the heart of the course content. By evaluating case studies and examining current issues in sports marketing, students will gain an understanding of what it means to be a professional marketer of a sports organization and/or event.

Prerequisite(s): MKT 200.

MKT 310 Business to Business Marketing 3 Credits

This course examines the business-to-business marketplace, and the planning and control tools used by its entities in managing the product, pricing, promotion, channel and supply chain management strategies.

Prerequisite(s): MKT 200.

MKT 320 Consumer Behavior 3 Credits

The nature and determinants of consumer behavior are studied, with attention given to the influence of socio-psychological factors such as personality, small groups, demographic variables, social class, and culture on the formation of consumer attitudes, consumption patterns, and purchasing behavior.

Prerequisite(s): MKT 200; Required for advertising majors.

MKT 330 International Marketing 3 Credits

This course examines the global marketplace and the complexities of its environmental influences, and necessary adaptations in formulating the strategies for product, pricing, promotion, channel and supply chain management.

Prerequisite(s): MKT 200.

MKT 340 Personal Selling 3 Credits

Examines persuasive techniques utilized in sales presentations conducted on a person-to-person basis. Major course emphasis is on developing effective selling techniques; understanding the company, its products and the role of the salesperson in implementing product/market strategies; understanding the customers and the selling environment; application of effective sales presentation techniques; recognizing selling opportunities and careers.

Prerequisite(s): MKT 200.

MKT 345 Customer Focus 3 Credits

Marketing supply chain management programs are concerned with the creation and delivery of value to customer and organizations. No longer simply the domain of the warehouse manager or logistics director, supply chain management is viewed by most companies as a mission-critical element. Marketing focuses on developing an understanding of customers and markets, creating products and services based on that understanding, and communicating and delivering the value added. This course will teach the student the essential role of marketing in all aspects of successful supply chain management - relationship management, technological and financial - and it will help the student understand the structure, functions, principles and methods employed in discovering and translating consumer needs and wants into product and service specifications and then transferring these goods and services from producers to consumers or end users.

Prerequisite(s): MKT 200 and GSC 115 or permission of instructor.

MKT 350 Retailing Management 3 Credits

The principles underlying successful retailing are analyzed within the framework of the strategic-planning process. Topics covered include location, merchandise planning, customer service, image, atmosphere, layout, pricing, promotion, personnel and operations management.

Prerequisite(s): MKT 200.

MKT 366 Marketing Research 3 Credits

Topics include specific research procedures in gathering, processing, analyzing, and presenting information relevant to marketing problems: advertising planning and effectiveness; product development; distribution channels; sales techniques; consumer behavior; and forecasting. Student learning about research planning, implementation, and interpretation is facilitated by the use of projects or cases.

Prerequisite(s): MKT 200; MSD 200, MSD 201; junior standing; Required for marketing and advertising majors.

MKT 369 International Advertising 3 Credits

This course introduces students to the general landscape of international advertising with emphasis on understanding the opportunities and challenges entailed in international advertising management. The course will cover the subject from three aspects, including the international advertising environment, the international advertising industry, and international advertising strategies.

Prerequisite: MKT 200 or permission of instructor.

MKT 370 Internet Marketing 3 Credits

This course emphasizes the discipline of internet marketing, including practices of leading online marketing companies, state of the art online research and demonstrates how the Internet is creating value for customers and profits for businesses while also fitting into a firm's complete marketing strategy. This course will provide a strategic and tactical toolkit for the online marketer, help students understand how and why the Internet is changing traditional marketing and allow students to develop the skills, strategies and tactics important to develop successful Internet marketing plans.

Prerequisite(s): MKT 200 and CIS 185.

MKT 375 Digital Advertising and Social Media 3 Credits

This course surveys the concepts, principles, practices and industry standards of digital advertising, including standard display and rich media advertising, search advertising, email advertising, game advertising, and mobile advertising. It also introduces the strategies and tactics in social media marketing. The course emphasizes a strategic, holistic view of digital advertising and social media as marketing communication tools that are situated in the marketing strategic framework and employed to engage consumers in community building.

Prerequisite(s): MKT 200.

MKT 380 Healthcare Marketing 3 Credits

The purpose of this course is to introduce students to the role, functions and tasks of healthcare marketing. Attention is devoted to applying basic marketing principles to the healthcare sector. Marketing decision making and analysis will be emphasized through the use of cases and current readings that focus on a variety of healthcare organizations, including hospitals, assisted living facilities, MCOs, and pharmaceutical companies.

Prerequisite(s): MKT 200 or permission of instructor.

MKT 440 Sales Management 3 Credits

By means of lectures, discussions, and case studies, the field of marketing management is analyzed from the viewpoint of sales executives. The responsibilities for planning and administering personal selling operations are emphasized. Considerable attention is given to other activities for which sales executives may be wholly or jointly responsible, such as decision making on promotion and brand management.

Prerequisite(s): MKT 200 and senior standing.

MKT 444 Spec. Topics Honors: Mkt & Law 3 Credits**MKT 460 Marketing Management Seminar 3 Credits**

This capstone course for marketing majors employs a top management approach to the overall marketing task, including planning, organizing, controlling, and integrating all the activities of the marketing program. Integration of marketing with other operations of the business unit is emphasized. Major problems and current trends are identified and analyzed through case discussion.

Prerequisite(s): Marketing major and 15 semester hours of marketing; Required for marketing majors.

MKT 469 Selected Topics in Marketing 3 Credits

The study of a topic (or combination of topics) that represents some dimension of marketing or has important and direct implications for marketing management. Theoretical foundations as well as special applications of marketing decision making may be explored. Readings, research, lectures, discussions, or other appropriate methods are employed to stimulate student learning.

Prerequisite(s): MKT 200 and senior standing or permission of instructor.

MKT 490 Independent Research and Study 1-4 Credits

Topic to be approved by the professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation, which may be counted as a business or free elective.

MKT 491 Internship-Based Indep Study 3 Credits

Provides the student an opportunity to supplement and apply classroom work in supervised employment with participating marketing and advertising firms. Requirements include a journal with a log of daily activities, and a project or term paper presented to and evaluated by the internship sponsor. Evaluation will also include a report by the company on the intern's performance. Credits may be used to satisfy business or free elective requirements.

Prerequisite(s): permission of instructor.

Premedical, Predental, Preveterinary Studies

Program Overview

Rider University offers students with baccalaureate degrees the opportunity to take the undergraduate science course prerequisites for medical, dental, veterinary or graduate school. Students may apply through the College of Continuing Studies (<http://www.rider.edu/academics/colleges-schools/college-continuing-studies/programs-offerings/degrees-certificates-working-adults/premedical-predental-prevet-studies>).

Curriculum Overview

This program is highly individualized. Students work closely with the Premedical Studies advisor to develop a plan of study that will meet their educational goals. In addition to basic core prerequisites, the program offers the opportunity to take courses in advanced biology and biochemistry to further prepare the student for successful preparation in medical, dental, or veterinary school. A typical post-baccalaureate program includes the courses listed below:

BIO 115 & 115L	Principles of Biology I and Principles of Biology I Lab	4
BIO 260 & 260L	Principles of Biology: Evolution, Diversity, and Biology of Cells and Principle of Biology: Cells Lab	4
BCH 325	Biochemistry I	3
CHE 120 & CHE 121	Principles of Chemistry and Principles of Chemistry Lab	4
CHE 122 & CHE 123	Intro to Chemical Systems and Quantitative Methods Lab	4
CHE 211 & 211L	Organic Chemistry I and Organic Chem I Lab	4
CHE 214 & 214L	Organic Chemistry II and Organic Chemistry II Lab	4
PHY 100 & 100L	Principles of Physics I and Principles of Physics I Lab ¹	4
PHY 101 & 101L	Principles of Physics II and Principles of Physics II Lab	4

¹ MTH 105: Algebra and Trigonometry is a prerequisite.

bspiegelber@rider.edu

Program Website: <http://www.rider.edu/academics/colleges-schools/college-continuing-studies/programs-offerings/prestudies>

Program Requirements

Applicants must complete a Post-baccalaureate Premedical Studies application form, submit official transcripts from all higher education institutions attended, and complete an application (<http://www.rider.edu/academics/colleges-schools/college-continuing-studies/programs-offerings/degrees-certificates-work-0>) to the College of Continuing Studies.

Applicants must meet the following criteria to gain admission to the Post-baccalaureate Premedical Studies Program:

- a baccalaureate degree from an accredited college or university'
- a 3.25 cumulative undergraduate GPA.

Applications are reviewed and approved by the College of Continuing Studies and the chair of the Premedical Studies Committee.

BIO 115 Principles of Biology I 4 Credits

An introductory biology course focusing on major themes of biology: what is life?; Cells as fundamental structure and functional unit of life; information transmission, storage and retrieval; Diversity and unity of life explained by evolution. Three hours of lecture and one three- hour lab per week.

Corequisite(s): BIO 115L.

BIO 115L Principles of Biology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 115.

BIO 260 Principles of Biology: Evolution, Diversity, and Biology of Cells 4 Credits

Lectures and labs focus on basic cell biology. Cell diversity and function, genetics and biotechnology are emphasized. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115 & BIO 116.

Corequisite(s): BIO 260L.

BIO 260L Principle of Biology: Cells Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 260.

BCH 325 Biochemistry I 3 Credits

Outlines the chemistry and biological function of carbohydrates, proteins, lipids, nucleic acids, vitamins, and enzymes, and introduces enzyme kinetics and biological energetics. Degradative metabolic pathways of carbohydrates and lipids, and their controlled interrelationships are discussed in detail.

Prerequisite(s): CHE 214.

CHE 120 Principles of Chemistry 3 Credits

For students who have successfully completed one year of high school chemistry. This systematic study of the fundamental principles and concepts of chemistry covers atomic structure, bonding, stoichiometric relationships, including solution and oxidation-reduction reactions, and molecular structure. Three hours of lecture per week. Prerequisite(s): High school chemistry or CHE 100 is recommended before taking this course.

Corequisite(s): CHE 121.

CHE 121 Principles of Chemistry Lab 1 Credits

For students concurrently taking CHE 120. Experiments involve gravimetric, volumetric, and spectrophotometric quantitative analysis. One three-hour lab per week. Fall.

CHE 122 Intro to Chemical Systems 3 Credits

A continuation of CHE 120. For students majoring in the sciences but may be taken by others. Chemical systems in which the study of kinetics, thermodynamics, equilibrium, and radiochemistry are emphasized. Three hours of lecture per week. Prerequisite(s): CHE 120, MTH 105 or higher.

Corequisite(s): CHE 123.

CHE 123 Quantitative Methods Lab 1 Credits

Usually taken concurrently with CHE 122. Primarily for students majoring in the sciences. A number of quantitative classical and instrumental methods of analysis are used to determine thermodynamic properties and reaction mechanisms. One three-hour lab per week. Prerequisite(s): CHE 121.

Corequisite(s): CHE 122.

CHE 211 Organic Chemistry I 4 Credits

The structure, chemical properties, and methods of preparation of the more important classes of carbon compounds are studied, with an emphasis on the relationship of structure, stereochemistry, and conformation to chemical reactivity. The preparation and reactivity of organic functional groups is introduced. The use of infrared and nuclear magnetic resonance spectroscopy, and mass spectrometry for elucidating structures of organic molecules is discussed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 122, CHE 123.

Corequisite(s): CHE 211L.

CHE 211L Organic Chem I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 211.

CHE 214 Organic Chemistry II 4 Credits

A continuation of Chemistry 211, emphasizing the mechanism of organic reactions, structural interpretations of properties, preparations, reactivity and identification of organic compounds. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 211.

Corequisite(s): CHE 214L.

CHE 214L Organic Chemistry II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 214.

MTH 105 Algebra and Trigonometry 4 Credits

Algebraic functions, trigonometric functions, identities and conditional equations, inequalities, exponential and logarithmic functions.

Prerequisite(s): A mathematics SAT score of 600 or ACT score of 26, or a mathematics SAT score of 550 or ACT score of 23 and a passing score on the Algebra Section of the Math and Science Majors Placement test, or a score of 22 on the Math Skills placement Test and a passing score on the Algebra Section of the Math and Science Majors Placement test.

PHY 100 Principles of Physics I 3 Credits

Introductory noncalculus physics with applications for pre-professional, biology, and geological, environmental and marine sciences majors. Classical mechanics, energy, mechanical waves, fluid statics and dynamics, thermodynamics. Elements of modern physics are interwoven with those of classical physics from the beginning. Not open to chemistry, physics, or mathematics majors. Three hours of lecture per week. Prerequisite(s): MTH 105, MTH 210, MTH 211 or MTH 212.

Corequisite(s): PHY 100L.

PHY 100L Principles of Physics I Lab 1 Credits

For students concurrently taking PHY 100. One three-hour lab per week.

Corequisite(s): PHY 100.

PHY 101 Principles of Physics II 3 Credits

Continuation of Physics 100. Electrostatics, electricity, and magnetism; DC and AC circuits, physical and geometrical optics, introduction to elementary particle and quantum physics. Three hours of lecture per week. Prerequisite(s): PHY 100.

Corequisite(s): PHY 101L.

PHY 101L Principles of Physics II Lab 1 Credits

For students concurrently taking Physics 101. One three-hour lab per week.

Corequisite(s): PHY 101.

Psychology (B.A.)

Program Overview

The psychology major is designed to meet the needs of various types of students and to develop a broad understanding of the many topic areas within the field of psychology.

The program is committed to helping students understand and appreciate both the scientific foundations and human service aspects of the field of psychology; develop and apply oral, written, analytical and critical-thinking skills applied to psychological issues, questions and problems; understand issues in contemporary psychology and recognize and apply psychological knowledge in order to provide solutions to real world problems and develop both interpersonal and intrapersonal knowledge through academic experiences and extra-curricular activities. The program is designed to foster self-awareness and personal growth, the development of leadership skills and a respect and understanding for human development and human diversity.

Curriculum Overview

The curriculum develops the fundamental skills that predict success in the profession of psychology, human services, corporate jobs, education and graduate school. Classes stress the development of writing skills, both technical report writing and literature research papers and provide a range of instruction on the statistical data analysis, online control of laboratory experiments, text processing and presentation software. In fieldwork placements, students gain work experience in a variety of human services programs within the community.

Members of the psychology faculty encourage students to become involved in research projects. Many Rider psychology seniors bound for graduate school receive offers of substantial financial aid in the form of assistantships and tuition waivers. These offers are made because our majors carry out research of high quality. Students have coauthored journal publications with the faculty and presented papers at regional and national conferences. Laboratories are always open for students and faculty supervision is always available.

Honors Program in Psychology

A student may receive honors in psychology by fulfilling the following conditions beyond the basic requirements for the psychology major: complete one Independent Research and Study project (490); earn a cumulative average of 3.25 and an average of 3.5 in psychology at the time of graduation.

Core Requirements

See Core Requirements (p. 161)
48-50

Psychology Core

PSY 100	Introduction to Psychology	3
PSY 105	Introduction to Research in Psychology	3
PSY 201	Statistics and Research Design	3

Choose one of the following:

PSY 302	Research Methods: Cognition	4
or PSY 303	Research Methods: Social Psychology	
or PSY 335	Research Methods: Human Cognitive Neuroscience	
or PSY 336	Research Methods: Animal Learning & Behavior	
or PSY 340	Research Methods: Group Dynamics	
or PSY 350	Research Methods: Developmental Psychology	

Psychology Lower Level

Choose four of the following:
12

PSY 210	Organizational Psychology
PSY 212	Introduction to Applied Behavior Analysis
PSY 215	Personality
PSY 218	Psychology of Women
PSY 220	Abnormal Psychology
PSY 225	Learning and Memory
PSY 230	Child Development
PSY 231	Youth and Adolescent Development
PSY 237	Cognitive Disabilities
PSY 238	Sensation and Perception
PSY 240	Social Psychology
PSY 255	Biopsychology

PSY 279	Psychology and Law
PSY 283	Sport Psychology

Psychology Upper Level

Choose four of the following:
12

PSY 305	Theories of Psychotherapy
PSY 315	Psychological Tests
PSY 324	Play and Imagination
PSY 325	Cognitive Development
PSY 330	Developmental Disabilities
PSY 333	Autism Spectrum Disorders
PSY 345	Health Psychology
PSY 360	Psychology of Peace & Conflict
PSY 365	Drugs and Human Behavior
PSY 372	States of Consciousness
PSY 374	Psychology of the Family
PSY 375	Psychology and Film
PSY 377	Developmental Psychopathology
PSY 381	Psychology of Gender
PSY 382	Aging, Brain, and Cognition
PSY 383	Psychology and Culture
PSY 384	Positive Psychology
PSY 385	Death, Dying and Suicide
PSY 395	Special Topics in Psychology

Capstone Course

Choose one of the following:
3

PSY 400	Senior Seminar
PSY 490	Independent Research and Study
PSY 491	Internship in Psychology

Free Electives
32-34

Total Credits
120

Requirements for the Minor

(18 credits)

PSY 100	Introduction to Psychology	3
Five psychology electives, including three at 300-level or above		15
Total Credits		18

PSY 100 Introduction to Psychology 3 Credits

An orientation to psychology, covering major facts, principles and concepts about human and animal behavior and experience, re-search findings, major problems, basic vocabulary, methodologies, and contributions in the field. Topics include psychology as a science; human development; individual differences; intelligence and its measurement; special aptitudes and interests; personality and social behavior; motivation and emotion; frustration and personality deviations; and learning, thinking, remembering and forgetting.

PSY 105 Introduction to Research in Psychology 3 Credits

Students will be introduced to the basic research methods used in psychology including, surveys, experiments and observation. Students will collect data and learn to describe this data using basic tools of analysis including graphic display and statistical analysis. Students will read original psychological research and learn to write using the conventions of the American Psychological Association.

Prerequisite(s): a grade of "C" in PSY 100.

PSY 201 Statistics and Research Design 3 Credits

Introduces students to statistics and research methods in the behavioral sciences. Covers the fundamentals of descriptive and inferential statistics, a variety of issues in research design, selected research designs including the case study, correlational and experimental designs. In addition, students will explore the literature in psychology in order to examine the use of statistics and research design in real research problems.

Prerequisite(s): grade of "C" in PSY 105.

PSY 210 Organizational Psychology 3 Credits

Focuses on issues related to human behavior in work settings. Topics include personnel issues such as hiring and promotion decisions, performance appraisals, and methods of on-the-job training. Issues of job satisfaction, motivation, productivity, and effective leadership styles are also examined. Finally, organizational structure as it relates to communication within organizations will be examined.

Prerequisite(s): PSY 100.

PSY 212 Introduction to Applied Behavior Analysis 3 Credits

Presents a review of classical and operant conditioning, data collection and research design, data analysis and interpretation. In addition, assessment and treatment strategies in a variety of settings, contingency management in institution, classroom and home, systematic self-desensitization, and ethical consideration are discussed.

Prerequisite(s): PSY 100.

PSY 215 Personality 3 Credits

A synthesis of the most recent research in the field of personality development. Topics include interplay of biological, cultural, and subjective personal processes; analysis of the broad trends in personality theories; and introduction to personality measurement.

Prerequisite(s): PSY 100.

PSY 218 Psychology of Women 3 Credits

Examines the psychological development of women in our culture from birth to maturity, with an emphasis on the interaction of biological and social influences on personality, social behavior, and achievement of women. Investigates psychological sex differences in terms of current measurement approaches. Readings and text are drawn from psychological theory and research.

Prerequisite(s): PSY 100.

PSY 220 Abnormal Psychology 3 Credits

The development of abnormal personalities is discussed, with a survey of the various types of mental abnormalities, including their symptoms, diagnoses, and treatments. Neuroses and psychoses are emphasized.

Prerequisite(s): PSY 100.

PSY 225 Learning and Memory 3 Credits

A broad coverage of the expanding fields of learning, memory, and cognition is provided, while addressing their relevance and impact on human behavior. Continuity between early associationistic and contemporary cognitive theories is established. Topics range from basic conditioning to the more complex processes of memory, concept learning, thinking, and problem solving. **Prerequisite(s):** PSY 100.

PSY 226 Cognitive Psychology 3 Credits

The study of the mind has been the focus of psychology since its inception in the 19th century. Today, the majority of psychological research focuses on the cognitive system and its biological basis. This course will provide an overview of knowledge regarding the components of the human cognitive system (e.g., attention, memory, executive processes) and how they form the basis for higher-order cognitive skills (e.g., language and decision making). The course will provide a history of the field and the methodologies that have been and are currently being used to study the human mind. Each section of the course will include an overview of basic and applied research to demonstrate how knowledge of the cognitive system can be used to enhance human functioning in applied settings and better understand human limitations and tendencies to commit certain types of errors.

Prerequisite(s): PSY 100.

PSY 230 Child Development 3 Credits

Presents theory and research on the social, emotional and cognitive development of children birth to age 12.

PSY 231 Youth and Adolescent Development 3 Credits

Presents theories, research and problems concerning development in youth and adolescence.

Prerequisite(s): PSY 100.

PSY 237 Cognitive Disabilities 3 Credits

Investigates various types of intellectual differences, focusing on etiology, methods of diagnosis, programs and services available to individuals and families. Considers problems relating to adjustment in academic, social, and vocational areas.

PSY 238 Sensation and Perception 3 Credits

The facts and theories of sensation and perception, their role in the total psychology of the individual, and current application are examined.

Prerequisite(s): PSY 100.

PSY 240 Social Psychology 3 Credits

Deals with the scientific study of human beings in social situations, focusing on reciprocal influence of the individual and the group, especially aspects of behavior that are socially determined. The nature of attitudes: their development and change; the nature of social influence; interpersonal perception and attraction; dynamics of social behavior; and social phenomena, such as prejudice and social movements, are covered.

Prerequisite(s): PSY 100.

PSY 250 Psychology of Aging 3 Credits

This survey course focuses on basic psychological issues in the aging process and in the elderly. It examines myths and stereotypes about aging and the elderly by way of research evidence pertaining to physical, psychological, and social changes accompanying aging.

Prerequisite(s): PSY 100.

PSY 255 Biopsychology 3 Credits

Basic biological structures and processes underlying behavior, including general neuroanatomy and neurophysiology; sensory physiology; structure and function of the motor systems; physiology of emotions, motivation, learning, memory; brain dysfunction; psychoactive drugs.

Prerequisite(s): PSY 100.

PSY 279 Psychology and Law 3 Credits

Introduces students to a study of selected topics in psychology and law. Topics include eyewitness testimony, jury selection, and decision making

Prerequisite(s): PSY 100.

PSY 283 Sport Psychology 3 Credits

This survey course will focus on the social and psychological factors related to performance and participation in sport and exercise, health, and injury rehabilitation settings. Two general questions will be explored: (a) how do social and psychological variables influence performance and participation in physical activity pursuits? And (b) how does physical activity participation affect the psychological well-being of the individual? To better understand these questions, this course will overview theoretical and methodological approaches to a variety of sport and exercise psychology topics, including: socialization, motivation, group processes, competition, and performance enhancement.

Prerequisite(s): PSY 100.

PSY 295 Directed Study in Psychology 1-4 Credits

Provides an opportunity for students to obtain research experiences in psychology. Consists of a combination of project meetings, assigned readings and supervised research. Each student will work with a selected faculty member on a topic of mutual interest. Projects may include learning some components of research methods and applying these techniques to the collection and analysis of data. Provides focused reading and discussion as it relates to each student's research topic.

Prerequisite(s): PSY 100; psychology majors or minors and permission of instructor and chair.

PSY 299 Field Placement in Applied Behavior Analysis 1-4 Credits

The practicum provides hands-on experience using the tools of applied behavior analysis in a field setting. Provides supervised field placement experience in an approved institution or agency in order for students to gain knowledge in applications of applied behavior analysis. Placement is made in various community institutions and agencies that offer services to diverse populations.

Prerequisite(s): PSY 100, PSY 212.

PSY 302 Research Methods: Cognition 4 Credits

Provides students with an in-depth coverage of the expanding field of cognition and memory. Addresses issues and research within the field. Emphasis is on current views of human memory. Students learn how to design and conduct their own experiments from the topic areas of information processing, psycholinguistics, problem solving, learning and memory, social cognition, and cognitive neuroscience. Laboratory skills include programming computers, developing multimedia stimuli, recording psycho-physiological data, and composing an APA-format research report in a network-based writing lab. **Prerequisite(s):** a grade of "C" in PSY 201; PSY 225, PSY 237 or PSY 325 or permission of instructor.

Corequisite(s): PSY 302L.

PSY 302L Research Methods: Cognition Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PSY 302.

PSY 303 Research Methods: Social Psychology 4 Credits

Covers research methodology within the context of social psychology (i.e., topics include altruism, aggression, attraction and social perception). Both experimental and descriptive methodologies will be covered. Students learn about various aspects of the research process (e.g., design and execution of a social psychological study, analyzing and interpreting the results). Students also learn to integrate their research findings to produce an APA-style paper. Students use computer-based word processing and statistical analysis packages to achieve these goals. **Prerequisite(s):** a grade of "C" in PSY 201; PSY 240 or PSY 279 or permission of instructor.

Corequisite(s): PSY 303L.

PSY 303L Research Methods: Social Psychology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PSY 303.

PSY 305 Theories of Psychotherapy 3 Credits

An exploration of the history and theory of the psychoanalytic, behavioral, and humanistic approaches to psychotherapy. Comparisons and contrasts between these therapeutic modalities are discussed, as well as the theory underlying specific therapeutic techniques such as dynamic interpretations, dream analysis, the analysis of resistance and transference, counter-conditioning, modeling, and cognitive restructuring. Class exercises in addition to transcripts and tape recordings from therapy sessions are used to illustrate the various therapeutic approaches.

Prerequisite(s): PSY 215 or PSY 220 or permission of instructor.

PSY 306 Research Methods: Sensation & Perception 4 Credits

Provides instruction in research design, research methods, and integration of data analysis and methodology within the content framework of sensation and perception. All the general psychology research methods are taught. Special emphasis is given to the study of human vision and audition. Students design, conduct, and report laboratory research in the areas of sensation and perception. The computer-based components of the laboratory include lessons on interactive software instrumentation for research, and network-based technical writing using APA format. Projects are conducted during the term. Each student uses a dedicated networked Macintosh computer to: a) develop and generate research stimuli and procedures, b) analyze and report research data, and c) write formal research reports. **Prerequisite(s):** a grade of "C" in PSY 201 or permission of instructor.

Corequisite(s): PSY 306L.

PSY 306L Sensation & Perception Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PSY 306.

PSY 315 Psychological Tests 3 Credits

Examines the history of psychological testing. Issues concerning the construction of psychological tests are discussed, including concepts concerning reliability, validity, and item analysis. The rationale and structure of the major tests of intelligence, aptitude, and personality are reviewed, including the Rorschach, WAIS, TAT, MMPI, and Bender-Gestalt. In the last section of the course, students are given hands-on experience in the administration, scoring, and interpretation of a standard test battery.

Prerequisite(s): any statistics course.

PSY 324 Play and Imagination 3 Credits

This course surveys two of the most important manifestations of children's imagination: pretend play and imaginary companions. It will discuss the evolution of play, the purpose of play, the role of play in the development of creativity, and individual differences in play (e.g., among children of different gender, cultures, and ability levels). Finally, it will discuss the application of play to therapeutic methods for children.

PSY 325 Cognitive Development 3 Credits

Compares and analyzes the major theories of cognitive development: Piaget, Information Processing, Vygotsky, Gardner, and Sternberg. The course describes cognitive growth from infancy to adulthood. Particular topics will include: concept formation, language acquisition, memory reading and writing, mathematical skills and sociocultural skills. Also of interest will be the use of cognitive theory in education, and understanding variations from the typical pattern of cognitive development as in mental retardation and prodigies.

Prerequisite(s): PSY 100.

PSY 329 Research Methods in Organizational Psychology 4 Credits

This course covers general area of research methods such as experimental and non-experimental methods, measurement, statistics, and preparation of reports for presentation and publication. In addition, research topics common in the area of organizational psychology such as worker motivation, job satisfaction, stress and burnout, communications in the workplace, productivity, decision-making, leadership style, and organizational structure will also be discussed. Students gain hands-on experience conducting empirical research.

PSY 329L Research Methods in Organizational Psychology 0 Credits

This course covers general area of research methods such as experimental and non-experimental methods, measurement, statistics, and preparation of reports for presentation and publication. In addition, research topics common in the area of organizational psychology such as worker motivation, job satisfaction, stress and burnout, communications in the workplace, productivity, decision-making, leadership style, and organizational structure will also be discussed. Students gain hands-on experience conducting empirical research.

PSY 330 Developmental Disabilities 3 Credits

Introduces students to the genetic, biological, sensory-motor, cognitive, and social-emotional foundations of developmental disabilities. Selected syndromes will be reviewed in depth, as will treatments and intervention at the individual and family levels.

Prerequisite(s): PSY 230, PSY 231 or PSY 237.

PSY 333 Autism Spectrum Disorders 3 Credits

Provides students with a general understanding of the etiology, neurocognitive underpinnings, and general characteristics of the autism spectrum disorders. The course will examine the history of the study of these disorders, the main problems associated with these conditions, and will explore psycho-educational treatment alternatives.

Prerequisite(s): PSY 230, PSY 231, PSY 237, or PSY 330.

PSY 335 Research Methods: Human Cognitive Neuroscience 4 Credits

Covers the interdisciplinary study of the nervous system integrating neurobiology, physiology, pharmacology, and psychology as explanations for both normal and pathological human behavior. Topics integrate molecular levels of analysis, such as neuron structure and function, neurotransmitters, action potentials, and receptors, with molar levels, such as sensory and hormonal processes, learning and memory, emotions, drug use, and biological rhythms. Introduces research techniques used to study the function of the nervous system and the neural bases of behavior in humans. Neuroanatomical, electrophysiological, pharmacological, and neuropsychological assessment techniques may be explored as part of laboratory or field research projects designed in collaboration with the instructor. **Prerequisite(s):** grade of "C" or better in PSY 201 and PSY 255 or permission of instructor.

Corequisite(s): PSY 335L.

PSY 335L Research Methods: Human Cognitive Neuroscience Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PSY 335.

PSY 336 Research Methods: Animal Learning & Behavior 4 Credits

Provides a comprehensive overview of the acquisition and modification of the behavior of animals, especially on laboratory strains of rodents and pigeons. Core topics include respondent and operant conditioning, animal cognition, observational learning, animal safety and welfare, single-subject and between-groups approaches to methodology, and the statistical analysis of the results of studies of behavior. The laboratory component of the course provides a comprehensive overview of animal handling and maintenance, animal welfare, and the recording of experimental results. Two substantial projects are undertaken; demonstration of a conditioned taste aversion and its effect upon the acquisition and extinction of an operant (bar press) response and subsequent discrimination and reversal learning. Results of both projects are written into APA-formatted reports. **Prerequisite(s):** a grade of "C" in PSY 201, PSY 225 or permission of instructor.

Corequisite(s): PSY 336L.

PSY 336L Animal Learning and Behavior Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PSY 336.

PSY 339 Research Methods in Applied Behavior Analysis 4 Credits

This upper-level laboratory course will provide students with in-depth study of the principles and applications of Applied Behavior Analysis. Students will examine behavioral principles, ethical considerations and real-life applications of ABA. Each student will design and implement a self-management plan to alter a behavior of their choosing. **Prerequisite(s):** PSY 100.

Corequisite(s): PSY 339L.

PSY 339L Research Methods in ABA Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PSY 339.

PSY 340 Research Methods: Group Dynamics 4 Credits

Focuses on selected issues pertaining to group dynamics. Emphasizes an understanding of the personality and social factors that influence the functioning of unstructured and task-oriented groups. Students participate in a task group for the purpose of conducting a comprehensive research project on selected issues in group dynamics and the psychology of groups. The task group prepares an APA-style paper describing their research as well as an in-class presentation. Each student also submits a midterm and final written analysis of the interactional processes and development of the task group. Prerequisite(s): a grade of "C" in PSY 201 or permission of instructor. Corequisite(s): PSY 340L.

PSY 340L Group Dynamics Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PSY 340.

PSY 345 Health Psychology 3 Credits

This course focuses on the biopsychosocial model of health in which biological, psychological and social factors contribute to health and wellbeing, as well as illness and disease. After a brief introduction to systems of the body, i.e. nervous, endocrine, respiratory, cardiovascular, digestive, immune, this course will examine health enhancing behaviors such as exercise and nutrition, as well as health compromising behaviors such as drug abuse and other reckless behaviors, along with models that explain behavior maintenance and change. Additionally, attention is devoted to a discussion of how health psychology can function in shaping health care policy.

Prerequisite(s): PSY 100.

PSY 350 Research Methods: Developmental Psychology 4 Credits

Focuses on one or more research areas in cognitive, personality, or social development. Includes an overview of major theoretical approaches to age-related change. Students review original research on selected aspects of behavioral change. The laboratory component of the course presents an overview of developmental research designs and methods focusing on the measurement of age-related change in psychological functioning. Students conduct field research projects designed in collaboration with the instructor and prepare an APA-style research report. Prerequisite(s): a grade of "C" in PSY 201 and PSY 230 or permission of instructor.

Corequisite(s): PSY 350L.

PSY 350L Developmental Psychology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PSY 350.

PSY 360 Psychology of Peace & Conflict 3 Credits

This course examines issues related to peace, conflict, violence, and conflict resolution. Theories and strategies that suggest ways of reducing and eliminating conflict are discussed. Psychological and social causes and consequences of violence and nonviolence are considered.

PSY 365 Drugs and Human Behavior 3 Credits

Presents the student with an in-depth analysis of the effects of alcohol and selected chemical substances on the behavior and body of the user. Commonly abused substances will be discussed in terms of their history, sources of production, routes of administration, distribution, metabolism and excretion, neurophysiology, tolerance, properties of addiction, withdrawal course and symptoms, and potential beneficial and harmful effects.

Prerequisite(s): PSY 100.

PSY 367 Creativity and Innovation 3 Credits

What is creativity, and how do we measure, study, and enhance it? This course will survey the modern theories of creativity from a psychological perspective, with an emphasis on the processes that underlie creative thinking and the variables that influence creative idea generation. Specific topics will include: convergent and divergent thinking, the role of the unconscious in creative ideation, flow and mindfulness, individual and group creativity, techniques such as brainstorming and creative problem solving, the neuroscience of creativity, the role of motivation, and creativity and innovation in organizations. Discussions of theoretical findings will be complemented by in-class activities and assignments that highlight applications to day-to-day living and to larger-scale challenges that require creativity and innovation.

Prerequisite(s): PSY 100.

PSY 372 States of Consciousness 3 Credits

This course explores the variety of states that comprise normal and altered consciousness. It highlights how these states are determined by complex interactions between conscious and unconscious mental functions. Key psychological concepts are applied in an investigation of various states of consciousness, especially meditative states and dreams. The course examines both the psychopathological aspects of altered states, as well as their potential beneficial effects on creativity and the development of the self.

Prerequisite(s): PSY 100.

PSY 373 Cyberpsychology 3 Credits

Cyberpsychology is the study of how emerging computer technologies, especially social media, affect the way people think, feel, and behave both online and in the face-to-face world. This course explores a wide range of topics concerning this rapidly developing field of psychology, including how individuals, interpersonal relationships, and groups function in cyberspace with both positive and negative consequences for mental health. It emphasizes an understanding of the basic concepts of cyberpsychology along with the implications of this knowledge for improving wellbeing in the digital age.

Prerequisite(s): PSY 100.

PSY 374 Psychology of the Family 3 Credits

This course examines the significance of family in human development. Using prominent themes of developmental psychology, such as: the role of attachment in forming human relationships, the significance of context in understanding human development, and the resilience of development; this course will explore the existing research on the family. Students are asked to consider their own experiences as members of a family, as well as to understand the varieties of ways family impacts development across the lifespan.

Prerequisite(s): PSY 100, PSY 230 or permission of instructor.

PSY 375 Psychology and Film 3 Credits

Attitudes, perceptions and memories are shaped by motion pictures. Filmmakers create enduring images by using cinematic techniques to portray social and interpersonal themes. This course will examine various cinematic techniques as well as how film portrays interpersonal relations, gender roles, race relations, mental illness, The Holocaust, and other genocides.

Prerequisite(s): PSY 100.

PSY 377 Developmental Psychopathology 3 Credits

This course provides an in-depth view of developmental psychopathology as an applied and prevention science. Developmental psychopathology is concerned with the emergence and continuity or discontinuity of psychopathology, or maladaptive behaviors, across the lifespan. An emphasis is placed on exploring individual, environmental, social, and especially cultural influences in explaining normal and abnormal behavior.

Prerequisite(s): PSY 230 or PSY 231.

PSY 381 Psychology of Gender 3 Credits

This course examines the meaning of sex and gender in modern society. The course readings and discussion will review and analyze the influence of gender on human behavior and emotions. The course will examine the significance of gender in shaping experience. Topics will include: gender differences in behavior, gender role development, gender and sexual identity, gender and social roles, cross-cultural perspectives on gender and transcending gender.

Prerequisite(s): PSY 100, PSY 218 or permission of instructor.

PSY 382 Aging, Brain, and Cognition 3 Credits

This course covers the biological structures and processes underlying cognition in humans and explores modulating factors such as age, sex, disease, stress, and environment. The theoretical and methodological issues of developmental cognitive neuroscience research are addressed. Focus of the course is on brain structure and function in the largest growing segment of our population, persons over the age of 65, and the link between structure and cognitive abilities, both intact and declining. Special attention is paid to those factors related to successful aging and treatments with putative cognitive enhancers.

Prerequisite(s): PSY 100.

PSY 383 Psychology and Culture 3 Credits

Students enrolled in this course will critically examine the intersection of culture and psychology. Topics covered include cultural influences on: identity, the perceptions and manifestations of mental illness, and treatment seeking.

Prerequisite(s): PSY 100.

PSY 384 Positive Psychology 3 Credits

Historically, the field of psychology has placed great attention on the question of, "What is wrong with people and how do we fix it?" This course will focus on the question of, "What is right with people and how can we build on that?" We will explore this by examining empirical research centered on the nature of happiness and psychological well-being. Positive psychology is the rigorous study of what is right and positive about people and institutions. Positive psychologists call for as much focus on strength as on weakness, as much attention on positive emotions as negative emotions, as much interest in building the best things in life as in repairing the worst, and as much attention to promoting the fulfillment of lives of healthy people as to healing the wounds of the distressed. This course will first present an introduction to the core assumptions and research findings associated with human strengths and positive emotions, then move on to explore interventions and applications informed by this perspective in counseling and psychotherapy, as well as in domains personally relevant to the lives of students such as school, work, family and other close relationships.

Prerequisite(s): PSY 100.

PSY 385 Death, Dying and Suicide 3 Credits

Everything that is alive eventually dies, thus death is a part of life. Understanding death can help us to understand and experience life more fully, and it can help us to make appropriate, compassionate responses to death and dying. Class members will examine difficult and controversial psychosocial issues related to dying and death, death perceptions from childhood through older adulthood, religious and death attitudes, the dying process, living with dying, dying in the American health care system, euthanasia and biomedical issues, pain management, suicide, cross-cultural perspectives on dying and death, the business of dying, the legal aspects of dying, and the bereavement process.

Prerequisite(s): PSY 100.

PSY 395 Special Topics in Psychology 3 Credits

This course examines contemporary issues in psychology, with the particular topic varying each time it is offered. New directions in the field and/or current controversies will be the focus. Past offerings include Positive Psychology, Creativity, and Brain Games.

PSY 400 Senior Seminar 3 Credits

This capstone course will provide a synthesis and evaluation of important critical issues in psychology, such as the role of modern psychology in solving social problems, the scientific vs. human services perspectives on behavior, emotion and cognition; and the nature of mental illness and well-being. Students will be expected to draw broadly from their education in psychology; to grapple with conflicting points of view; and produce professional quality writing, oral or multimedia presentations.

PSY 420 History of Psychology 3 Credits

Provides a coverage of systems and schools of psychology; great psychologists, their contributions, and later influence in psychology. Current psychological problems are also discussed.

PSY 490 Independent Research and Study 1-4 Credits

Provides students with an opportunity to design and carry out original research in an area of their choice. Students designate a faculty supervisor and work closely with him/her during the semester. All students must have approval from the department and the dean to register for PSY 490.

Prerequisite(s): PSY 201.

PSY 491 Internship in Psychology 1-4 Credits

Provides supervised work experience in an approved institution or agency in order for students to gain knowledge in applications of psychology. Placement is made in various community institutions and agencies that offer services to both exceptional and normal individuals.

Prerequisite(s): senior psychology majors or minors.

PSY 510 Introduction to Applied Behavior Analysis 3 Credits

This course will provide an introduction to applied behavior analysis. Students will learn the history and defining features of the field. Due to the scientific nature of applied behavior analysis, students will also learn characteristics and processes associated with the scientific method. Furthermore, foundational concepts will be defined, along with relevant behavior change procedures.

PSY 511 Principles of Learning 3 Credits

This course will provide students with more in depth understanding of the philosophical assumptions, characteristics and basic principles of behavior analysis. Students will have the opportunity to review concepts learned during Introduction to Applied Behavior Analysis. This course will also provide an introduction to the basic research in behavior analysis. Students will become more fluent in definitions, characteristics, principles, processes, and concepts of behavior analysis.

Prerequisite(s): PSY 510.

PSY 513 Observational Methods and Functional Assessment 3 Credits

This course is designed to provide knowledge and skills of methodologies to conduct a thorough behavioral assessment, interpret the assessment data, and identify goals for treatment. Topics will include direct observation/data collection methods, data analysis, functional assessment, stimulus preference and reinforcer assessments, and ethical and professional issues. The second half of the course will deal specifically with functional analysis including the history of and variations to the methodology. The relationship between assessment techniques and the development of the least-restrictive but most effective behavioral intervention will also be discussed.

Prerequisite(s): PSY 510, PSY 511.

PSY 514 Single Subject Research Design and Analysis 3 Credits

Students will be introduced to the basic evaluative methods used in behavior analysis including various models of single subject design such as multiple baselines, reversal designs, and alternating treatment models. Students will design analyses, collect data, graphically display their data, and provide an analysis of findings. Students will read original behavior analytic research articles and practice analysis of findings.

Prerequisite(s): PSY 510, PSY 511, PSY 513.

PSY 515 Psychological Tests 3 Credits

Examines the history of psychological testing. Issues concerning the construction of psychological tests are discussed, including concepts concerning reliability, validity, and item analysis. The rationale and structure of the major tests of intelligence, aptitude, and personality are reviewed, including the Rorschach, WAIS, TAT, MMPI, and Bender-Gestalt. In the last section of the course, students are given hands-on experience in the administration, scoring, and interpretation of a standard test battery.

Prerequisite(s): any statistics course.

PSY 516 Creating Effective & Ethical Interventions 3 Credits

This course will familiarize the student with ethical issues and responsibilities of behavior analysts working in applied settings. Informed consent, due process, protection of confidentiality, and selection of least intrusive, least restrictive behavior change procedures will be presented and discussed within the context of case method. Ethical decision making processes will be emphasized, and the relationship between ethics and law will be explored.

PSY 525 Cognitive Development 3 Credits

Compares and analyzes the major theories of cognitive development: Piaget, Information Processing, Vygotsky, Gardner, and Sternberg. The course describes cognitive growth from infancy to adulthood. Particular topics will include: concept formation, language acquisition, memory reading and writing, mathematical skills and sociocultural skills. Also of interest will be the use of cognitive theory in education, and understanding variations from the typical pattern of cognitive development as in mental retardation and prodigies.

PSY 530 Interventions for Individuals with Developmental Disabilities 3 Credits

The purpose of this course is to prepare students to work with individuals with a broad spectrum of developmental disabilities. The course will begin with a discussion of typical child development and milestones, address how development might differ from the norm, introduce subsequent assessment and diagnosis and ultimately, introduce appropriate interventions. The main focus of this course is applied behavior analysis [ABA] and common ABA strategies for intervention.

PSY 533 Interventions for Autism 3 Credits

The purpose of this course is to provide students with a general understanding of the clinical characteristics of autism spectrum disorders. The course will briefly address etiology and neurocognitive underpinnings of these disorders but will focus on psycho-educational interventions. The course will be taught from an applied behavior analytic perspective.

PSY 535 Language Assessment and Intervention 3 Credits

Students will be introduced to the classification of verbal responses, both vocal and non-vocal. Using videotaped examples, students will categorize observed verbal behavior. Students will be provided with practical tools for the assessment of verbal behavior, as well as an array of intervention strategies. A focus will include the design of teaching strategies to enhance language acquisition, as well as ongoing evaluation of intervention efficacy will be employed.

Prerequisite(s): PSY 510, PSY 511.

PSY 536 Social Skills Assessment & Intervention 3 Credits

Students will be introduced to the development of social skills and the identification social skills deficits. Using videotaped examples, students will categorize observed social behavior. Next, students will be provided with practical tools for the assessment of social and emotional behavior, as well as an array of intervention strategies. Tools for the collection of data and the evaluation of the success of target interventions will be stressed.

Prerequisite(s): PSY 510, PSY 511.

PSY 545 Health Psychology 3 Credits

This course focuses on the biopsychosocial model of health in which biological, psychological and social factors contribute to health and wellbeing, as well as illness and disease. After a brief introduction to systems of the body, i.e. nervous, endocrine, respiratory, cardiovascular, digestive, immune, this course will examine health enhancing behaviors such as exercise and nutrition, as well as health compromising behaviors such as drug abuse and other reckless behaviors, along with models that explain behavior maintenance and change. Additionally, attention is devoted to a discussion of how health psychology can function in shaping health care policy.

PSY 565 Drugs and Human Behavior 3 Credits

Presents the student with an in-depth analysis of the effects of alcohol and selected chemical substances on the behavior and body of the user. Commonly abused substances will be discussed in terms of their history, sources of production, routes of administration, distribution, metabolism and excretion, neurophysiology, tolerance, properties of addiction, withdrawal course and symptoms, and potential beneficial and harmful effects.

PSY 567 Multicultural Perspectives in Applied Psychology 3 Credits

In this graduate level course, students will examine in-depth, culture and identity formation, social relationships, the perception and manifestation of mental illness, and treatment seeking among other areas. Additionally, given the increasing diversity of communities in the US, the course will also focus on immigration, acculturation, discrimination, and the psychological correlates of each. Implications of these factors for emerging practitioners will also be covered.

PSY 572 States of Consciousness 3 Credits

This course explores the variety of states that comprise normal and altered consciousness. It highlights how these states are determined by complex interactions between conscious and unconscious mental functions. Key psychological concepts are applied in an investigation of various states of consciousness, especially meditative states and dreams. The course examines both the psychopathological aspects of altered states, as well as their potential beneficial effects on creativity and the development of the self.

PSY 574 Psychology of the Family 3 Credits

This course examines the significance of family in human development. Using prominent themes of developmental psychology, such as: the role of attachment in forming human relationships, the significance of context in understanding human development, and the resilience of development; this course will explore the existing research on the family. Students are asked to consider their own experiences as members of a family, as well as to understand the varieties of ways family impacts development across the lifespan.

PSY 577 Developmental Psychopathology 3 Credits

This course provides an in-depth view of developmental psychopathology as an applied and prevention science. Developmental psychopathology is concerned with the emergence and continuity or discontinuity of psychopathology, or maladaptive behaviors, across the lifespan. An emphasis is placed on exploring individual, environmental, social, and especially cultural influences in explaining normal and abnormal behavior.

PSY 582 Aging, Brain, and Cognition 3 Credits

This course covers the biological structures and processes underlying cognition in humans and explores modulating factors such as age, sex, disease, stress, and environment. The theoretical and methodological issues of developmental cognitive neuroscience research are addressed. Focus of the course is on brain structure and function in the largest growing segment of our population, persons over the age of 65, and the link between structure and cognitive abilities, both intact and declining. Special attention is paid to those factors related to successful aging and treatments with putative cognitive enhancers.

PSY 585 Independent Research and Study 1-4 Credits

Provides students with an opportunity to design and carry out original research in an area of their choice. Students designate a faculty supervisor and work closely with him/her during the semester. Permission of Instructor.

PSY 590 Field Placement in Applied Behavior Analysis 3 Credits

The applied behavior analysis practicum includes a required field placement of 15 hours per week and periodic on campus meetings. The practicum experience will allow students to experience the professional life of a behavior analyst in one of several preapproved sites. Sites approved include those for children, adolescents or adults with disabilities. Placements will be selected in consultation with the Practicum Coordinator and will require a written practicum plan from the cooperating field supervisor.

Prerequisite(s): PSY 510, PSY 511, PSY 513, PSY 514.

PSY 595 Selected Topics in Applied Psychology 3 Credits

Students will actively engage in an in-depth inquiry into a special topic area concerning applied psychology. Though the topics will change, students will be required to read and discuss current literature as well as considering the application of tools of the discipline to research questions of their own.

Public Relations (B.A.)

Program Overview

Public relations students at Rider study the theories behind effective public communication. The program focuses on all facets of practical campaigns, as students learn from professionals in the field as well as their professors. In the capstone course, students work with local corporate or nonprofit clients.

Classroom experiences are augmented by membership in the Rider chapter of the Public Relations Student Society (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/communicat-21>) of America (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/communicat-21>).

Curriculum Overview

Core classes in the public relations program include advanced speech, publication design, public relations, feature writing, publicity methods in organizations and cases and campaigns in public relations.

Other classes include communication theory, theories of persuasion, news reporting and writing, copy editing, sports media relations, internal communications, marketing principles, advertising principles and more.

Degree Offered

- B.A. in public relations

COM 393	International Communication
MKT 200	Marketing Principles

Free Electives 24-26

Total Credits 120

COM 104 Speech Communication 3 Credits

Examines basic communication principles and strategies of public speaking. Various genres of oral communication are studied, with an emphasis on extemporaneous and impromptu forms of delivery. Students research, prepare, and deliver speeches that are then used as the focal point for the discussion of effective speaking and listening. A number of speeches are videotaped. Students who received credit for COM 104S may not take this course.

COM 105 Communication, Culture and Media 3 Credits

Provides a detailed investigation and analysis into the nature, history, scope, adequacy, and limitations of mass communication and examines the reciprocal influence of the media on culture and society.

COM 107 Writing for the Media 3 Credits

Introduces students to interviewing and persuasive writing techniques for print and electronic public relations and advertising formats. Teaches techniques for creating effective digital audio-visual aids and working with digital audio and video.

COM 131 Fundamentals of Video Production 3 Credits

Introduces students to basic video production theories, techniques, and applications. Students will gain competency in a number of video production areas including: production planning, camera operations, lighting, sound, and digital non-linear editing. Individual and group production exercises will involve planning and executing video productions in both studio and non-studio settings. This class is designed to prepare students from any major to effectively create, produce, shoot, and edit basic video production assignments including public service announcements, video news releases, educational/instructional videos, and marketing/promotional spots.

COM 201 Communication Theory 3 Credits

Explores selected theories, models, and research methods in human communication, the dynamics of the communication process in various settings, and the role of communication in human interaction.

COM 204 Advanced Speech Communication 3 Credits

Provides students with the opportunity to further their study and practice of various types of speech communication. Moving beyond an introductory perspective, this course focuses on the development of critical, analytical, and pragmatic aspects of speech. The focus is divided between the discussion of theoretical models and a demonstrated competence of that material.

Prerequisite(s): COM 104 or COM 290.

COM 205 Theories of Persuasion 3 Credits

Analyzes the motivations that lead individuals and audiences to beliefs and actions and the techniques of achieving objectives through persuasion. Attention, interest, empathy, ethos, fear, and techniques of speakers, and those who use persuasion professionally are studied.

COM 210 News Reporting and Writing 3 Credits

Develops skills in hard-news reporting. Employs off-campus reporting assignments to refine information-gathering techniques such as interviewing, observation, and use of government documents and other contextual materials. Includes reporting and writing about police news, state and local government, the criminal justice system, science, business, and sports.

Prerequisite(s): COM 102.

COM 211 Copy Editing 3 Credits

Teaches all phases of copy editing for news and public relations: marking of copy, online editing, fact checking, building and shaping news and feature stories, applying mechanical style, building an ear for graceful English, and safeguarding against legal and ethical problems. Provides comprehensive review of grammar, spelling and punctuation, along with intensive practice in writing headlines and captions and editing wire copy.

Prerequisite(s): COM 102.

COM 212 Publication Design 3 Credits

Explains theories, principles, and techniques of print media layout and design. Provides an understanding of the use of type and art as design elements in various publication formats, such as newspapers, newsletters, advertisements and brochures. Directs students to apply these concepts to the creation of published materials using Adobe Creative Suite.

COM 215 Computer Assisted Reporting 3 Credits

Develops advanced reporting techniques for researching and writing in-depth news stories and investigative articles. Uses state-of-the-art computer-assisted reporting methods including finding and mining data bases on the Internet, creating spreadsheets to analyze data, and employing data base manager software to sort and summarize information in government documents and other specialized resources. Focuses on conceptualizing of story ideas, planning major projects, gathering information by means of data bases, participant-observation, interviews, and analysis of public documents. Emphasizes organizing large quantities of material and presenting it in a meaningful context, including with information graphics.

Prerequisite(s): COM 102 or permission of instructor.

COM 233 Writing for Broadcast 3 Credits

Introduces diverse and highly structured writing styles and formats used in writing for broadcast. With focus on effective and creative writing using broadcast style, students will be exposed to the fundamentals of writing dramatic and non-dramatic material for radio and television including station IDs and liners, public service announcements and commercials, news and public affairs programs, and short dramatic and documentary scripts. Through lectures, case discussions, in-class assignments, and critiques, emphasis will be on the practical application of basic rules and conventions common to broadcast writing from copy preparation to on-air delivery.

COM 240 Public Relations 3 Credits

Introduces current theories and practices of public relations, with emphasis on facilitating two-way communication with various publics. Explores approaches to public relations problems by critically analyzing case studies and applying theories and techniques to realistic situations.

COM 253 Organizational Communication 3 Credits

Focuses on the ongoing communication processes in organizations. This course examines how and why organizations develop policies and procedures that both encourage and yet constrain creativity and autonomy in employees. It also introduces various management skills to balance the dynamic in organizations. Finally, the course introduces students to various communication technologies that enable communication processes in organizations. Students will also have opportunities to participate in creating organizational dynamics through role-playing exercises, case studies, and other kinds of experiential learning.

COM 261 Web Design I 3 Credits

Introduces students to digital graphics, text, audio and video for Web design using Adobe Creative Suite. Students will learn the basics of audio, video, graphic, and interactive software along with theories of design and perception that underlie effective presentation of digital messages.

COM 301 Communication Law 3 Credits

Critically examines the legal limits and privileges affecting freedom of expression, especially in publishing, advertising, film, telecasting, and cyberspace. Places particular emphasis on the historical and philosophical foundations of the freedoms and limitations of communication in the United States.

COM 302 Communication Ethics 3 Credits

Analyzes internal and external pressures on the communication professional including economic, cultural, social, and political pressures, assesses the philosophical and practical basis for responding to such pressures, evaluates contemporary media responses to these pressures, identifies those that are of laudable quality and why, and provides guidance as to how individuals and organizations can think and react ethically. Issues addressed include censorship, confidentiality, conflicts of interests, minority and ethnic groups, privacy, sensationalism, and self-criticism.

COM 316 Feature Writing 3 Credits

Focuses on problems and requirements of newspaper, magazine, public relations, and free-lance nonfiction writing. Students write features designed for acceptance in print, broadcast and digital media and learn marketing techniques.

Prerequisite(s): COM 102 or COM 107, English writing concentration, or permission of instructor.

COM 341 Publicity Methods 3 Credits

Applies communication theory to writing and editorial processes and production techniques to create public relations materials; includes press releases, industrial publications, social media, trade publications, brochures, newsletters, stockholder reports, and multimedia platforms.

Prerequisite(s): COM 107, COM 240, or permission of instructor.

COM 347 Sports Media Relations 3 Credits

Critically examines the symbiotic relationship between the mass media and professional sports franchises and major college athletic programs. This course deals with the workings and processes behind executing the proper techniques of sports information and media relations, as well as an analysis of the culture of sports in modern society. Students will develop a practical focus on sports information and promotion, including the role of the sports information director and events promoter, with emphasis on advanced concepts of public relations, publicity and marketing.

Prerequisite(s): COM 240 or permission of instructor.

COM 360 Adv Publicatn Design & Present 3 Credits

Builds on elementary knowledge of graphic design to teach the principles of advanced layout, and computer graphics. Introduces students to industry standard drawing software and builds on their knowledge of layout software gained in the prerequisite course. Provides an understanding of the use of logos, infographics and magazine layout, and of the theoretical bases of color for print production.

Prerequisite(s): COM 212.

COM 393 International Communication 3 Credits

Examines mass media systems and their influence on international communication. Emphasizes media systems of major political powers such as Russia, China, the European community, the United States, and geo-political centers such as Africa, Asia, the Middle East, and Latin America. Using a seminar format, the course explores how a nation's mass media reflect its socio-political environment and national values. Focuses on the international images constructed by the mass media. Note: This course is crosslisted as GLS 393. Students may not get credit for both COM 393 and GLS 393.

COM 400 Senior Seminar Communication 3 Credits

Provides students with the opportunity to explore critical issues in communication and journalism in a dynamic and engaging context. Students conceptualize problems, develop hypotheses, review literature, design appropriate techniques of inquiry, conduct their research, and present their findings orally to the seminar and in writing to the instructor. Senior journalism and communication majors only.

COM 440 Cases & Campaigns in PR 3 Credits

Critically analyzes public relations case problems in industry, labor, education, government, social welfare, and trade associations. Emphasizes problem solving through the use of communication theories, public relations techniques, creative thinking, and the development of professional goals and standards. Employs realistic simulation exercises and actual case studies to develop and critique students' ability to demonstrate this knowledge in professional situations.

Prerequisite(s): COM 341 or permission of instructor.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

Public Relations Certificate Program

The Public Relations Certificate is designed for students who have or are pursuing a baccalaureate degree and wish to specialize in the area of public relations. The 24-credit program includes courses in writing for the media, publication design, speech communication, as well as other areas of public relations. Upon completion of the program, students with a baccalaureate degree receive an official Public Relations Certificate.

Required Courses

COM 104	Speech Communication	3
or COM 290	Professional/Strategic Speech	
COM 107	Writing for the Media	3
COM 212	Publication Design	3
COM 240	Public Relations	3
COM 316	Feature Writing	3
COM 341	Publicity Methods	3
COM 440	Cases & Campaigns in PR	3
Select one of the following:		3
COM 131	Fundamentals of Video Production	
COM 253	Organizational Communication	
COM 280	Issues in Event Planning	
COM 347	Sports Media Relations	

COM 348	Communication Research Methods
Total Credits	24

A grade of "C+" or better in each course is required for the certificate. A minimum of six of the required courses must be taken at Rider.

Admission Requirements

Minimum admissions requirements for the public relations certificate are:

- a baccalaureate degree or be a candidate for a baccalaureate degree (usually at Rider);
- junior standing or beyond (may take some courses before admission to the program);
- a 2.5 GPA in all undergraduate work or evidence of acceptable public relations experience.

This program is available only to students enrolled in CCS.

Program Completion and Certification

Students will receive their certificates after successfully completing the eight required courses. Students without a baccalaureate degree will receive their certificates after completing the eight required courses and the baccalaureate degree. The notation Public Relations Certificate will appear on the student's Rider transcript when the certificate is awarded. Students leaving CCS for any other Rider undergraduate program before earning the certificate will not be eligible for the certificate.

Social Work

Program Overview

In a sequence of three social work courses, students learn about the development of welfare and social service programs; they acquire skills in interviewing, case management, and group dynamics; and they gain work experience in a social service agency.

Minor Offered

- Minor in Social Work

Social Work Minor Requirements

(18-21 credits)

SOW 200	Social Services & Social Work	3
SOW 300	Methods Social Work Practice	3
SOW 301	Field Work Experience	3-6
Select one course from each of the following two groups:		
Group I		3
SOC 205	Families	
SOC 248	Social Service Organizations	
SOC 350	Social Policy	
Group II		3
PSY 230	Child Development ¹	
or PSY 231	Youth and Adolescent Development	
One additional course in an area of concentration relevant to social work. ²		3
Total Credits		18-21

¹ PSY 100 is a pre-requisite for all Psychology courses.

² Examples of such areas are: Aging, Human Service Organizations, Psychological Counseling, and Criminal Justice. This course is chosen in consultation with an advisor.

Courses and Descriptions

SOC 205 Families 3 Credits

Examines families in the United States, past and present, emphasizing the variety of family experiences in different social contexts and the relationship between family life and social change. Includes comparative material on families in other countries and considers possible alternatives to current family forms.

Prerequisite(s): SOC 101.

SOC 248 Social Service Organizations 3 Credits

Examines the growth and variety of social service organizations. The training of providers, such as teachers and physicians, and relationships between professionals and clients in settings such as schools and hospitals are studied as well as organizational decision-making, finances, and community relations.

Prerequisite(s): SOC 101.

SOC 350 Social Policy 3 Credits

Investigates the relationship between economic development and social policy in comparative and historical context. The main features of preindustrial, early industrial, and advanced industrial social welfare systems are described. Social, economic and political factors that shape social policy are investigated.

Prerequisite(s): SOC 101.

SOW 200 Social Services & Social Work 3 Credits

An overview of the historical development of social work. Emphasis on current issues in social welfare and social service programs in the United States. Among the programs explored are those in public welfare, mental health, medical services, child abuse/neglect, school social work, and care for the elderly.

SOW 300 Methods Social Work Practice 3 Credits

Interviewing techniques are taught and practiced. Skills in forming and running small groups, working with community organizations, and administering social programs are emphasized. Students study how to gather pertinent psycho-social facts about clients, make an assessment, plan an intervention, and successfully complete service to the client. Students who next will take SOW 301 Field Work Experience will be placed in a social service agency by the end of the semester.

Prerequisite(s): SOW 200.

SOW 301 Field Work Experience 3 Credits

Students observe and work in a social service agency. They study the structure of the agency and the people and roles within it, and develop helping skills with clients. Approximately six to eight hours of field work a week for each three credits are required, plus class sessions during the semester.

Prerequisite(s): SOW 200, SOW 300. May be taken twice in two separate semesters for a maximum of six credits toward the total credits required for graduation.

PSY 230 Child Development 3 Credits

Presents theory and research on the social, emotional and cognitive development of children birth to age 12.

PSY 231 Youth and Adolescent Development 3 Credits

Presents theories, research and problems concerning development in youth and adolescence.

Prerequisite(s): PSY 100.

Core Requirements

The College of Continuing Studies core requirements consist of two major areas: Basic Core (p. 161) and the Areas of Knowledge (p. 161). CCS students pursuing the Bachelor of Science in Business Administration should refer to the College of Business Administration's core requirements (p. 89).

The Basic Core

CMP 120	Expository Writing	3
CMP 125	Research Writing	3
COM 104	Speech Communication	3
Quantitative Skills Requirement ¹		3
Information Technology Requirement ²		3
Total Credits		15

¹ The quantitative skills requirement can be met by successfully completing one course in college-level mathematics or statistics. For students who don't transfer such a course to Rider, popular offerings include MTH 102 Finite Mathematics, MSD 104 Intro to Quantitative Methods, MSD 105 Quantitative Methods for Business, MSD 200 Statistical Methods I, MSD 201 Statistical Methods II, POL 230 Methods of Political Analysis, PSY 105 Introduction to Research in Psychology, PSY 201 Statistics and Research Design, and others.

² Students who possess sufficient computer experience can gain credit for CIS 185 Information Systems Essentials through assessment (http://www.rider.edu/sites/default/files/docs/Credit_for_CIS_185.pdf).

The Areas of Knowledge

The areas of knowledge provide exposure to four broad areas of knowledge, and students select two or three courses from each of the

four areas. At least two disciplines must be represented in each area. No more than three courses from any one discipline may be used to meet the areas of knowledge requirement. Students are urged to consult with their advisors before selecting courses for the areas of knowledge to ensure that courses chosen meet the requirements

Historical Perspective	9

Historical Perspective

To comprehend the contemporary world, one must appreciate that it is the result of historical evolution and that this process of change continues today. Our society should not be understood as rigid or absolute but as part of a historical continuum.

Policies

Changing to Degree Candidacy (Matriculation) (p. 165)

Audit and Alumni Audit (p. 165)

Credit by Nontraditional Means (p. 165)

Old Credits Policy (p. 165)

Independent Research and Study (p. 165)

Changing to Degree Candidacy (Matriculation)

Non-matriculated students interested in degree candidacy should consult an academic advisor in CCS before applying for admission to a degree program. An applicant for matriculation must have at least a 2.0 average at Rider and meet the admissions requirements as described for degree candidates. (Specific majors may require a higher grade point average.)

When students qualify for matriculation, they will receive credit toward their degrees for all applicable courses previously completed satisfactorily. Students are bound by the degree requirements and transfer credit policy in effect at the time of matriculation.

Students who have earned more than 21 credits at Rider as non-degree candidates may be asked to explain their educational goals and, if appropriate, to matriculate.

Audit and Alumni Audit

Students who want to attend classes without taking examinations or receiving grades may audit courses when class space allows. Audited classes will be indicated with the notation of "X" on the transcript.

The extent to which an auditor may take part in a course's activities is determined by the student and the instructor. In addition to the audit fee, students auditing a course carrying separate fees must pay all such required fees.

Students who want to enroll as auditors should apply and register in the CCS office during the scheduled evenings of the first week of class. Students who register on an audit basis may not change from audit to credit during a semester. However, a student who has audited a course may take that same course for credit in a later semester at full tuition.

Students who register on an audit basis may not change from audit to credit during a semester, except during the add period. Students originally registered for credit may change to audit status during the add/drop period. Students should refer to the academic calendar (<http://www.rider.edu/academics/academic-support-services/registrar/academic-calendars>) of each term [Spring, Summer, Fall, JTerm] for specific add and drop/add dates.

Rider alumni (<http://www.rider.edu/alumni>) who want to audit courses receive a special discount and should contact CCS at 609-896-5033 or ccs@rider.edu.

Credit by Nontraditional Means

Credit earned for college-level knowledge obtained through means other than traditional classroom work at an accredited college may be considered for transfer. Students should consult with a CCS advisor to discuss the transferability of nontraditional credit.

Nontraditional transfer credits include:

- College Level Examination Program (CLEP) credits;
- Advanced Placement credits;
- Formal military credits which meet Rider standards and procedures;
- DANTES Subject Standardized Test that meets credit recommendations established by the American Council on Education;
- Validation or assessment of specific courses approved by a Rider faculty member;
- Prior learning assessment (PLA) based on demonstrated learning acquired through life and work experience approved by Rider faculty.

Old Credits Policy

The academic record of a student returning to Rider after an absence of 10 years or more will be re-evaluated to determine the applicability of old courses to present requirements. Grades earned in courses taken 10 years or more before returning will not be counted in the student's present grade point average. Old courses that are judged applicable to current degree programs will be used to meet degree requirements.

Independent Research and Study

Independent Research and Study are designed for CCS students who wish to conduct projects on either a business or liberal arts topic outside the traditional curriculum, such as interdisciplinary projects, extension of previous work, and topics not covered in regular course offerings. To be eligible for an Independent Research and Study, a student must be a junior or a senior in good academic standing. Students should consult with a CCS advisor for approval. Refer to Independent Research and Study under the College of Business Administration (p. 10) or the College of Liberal Arts, Education and Sciences (p. 166).

College of Liberal Arts and Sciences

The **College of Liberal Arts and Sciences (CLAS)** is dedicated to educating the whole student for citizenship, life, and career success in a diverse and interdependent world.

The school cultivates intellectual creativity, maturity, reflection, and autonomy. It promotes both broad academic inquiry and specialized knowledge, while nurturing ethical and effective applications of communication and technological skills.

The faculty, 99 percent of whom hold doctoral degrees, are key to the delivery of a comprehensive liberal arts education. They demonstrate an expert and practical dedication in and out of the classroom, encouraging the free exploration of ideas and examination of difficult problems within their fields.

In addition, CLAS offers a “value added” education, encouraging students to spend time studying abroad; researching in collaboration with faculty and other students; shadowing and interning at nationally renowned companies, governmental agencies, and not-for-profit organizations; and engaging in interdisciplinary programs of study. The impact of these activities will stay with students forever, significantly enhancing the value of their liberal arts experience.

CLAS aims not only to provide students with expertise and experience in their chosen fields, but also to guide their learning of life-long skills that cut across disciplines. Abilities such as critical thinking, quantitative analysis, effective communication, information literacy and technological competencies prepare students to participate in a globalized and sustainable world where active learning, not static knowledge, is essential. These elements of Rider’s liberal arts education are necessary to prepare students for meaningful participation as citizens and to become productive and successful in the workplace.

In short, CLAS encourages students to develop a deep understanding and appreciation of the foundational areas of human knowledge and values. It seeks to accomplish this goal by means of a clear and well-defined core curriculum and freely chosen specialized majors. Its central objectives are to provide pre-professional competence in the liberal arts and sciences and to prepare students for a lifetime of learning that is responsive to change.

Undergraduate Departments

Liberal Arts

Communication and Journalism
English
Languages, Literatures and Cultures
History
Philosophy
Political Science
Sociology and Criminology

Sciences

Biology
Chemistry, Biochemistry and Physics
Geological, Environmental, and Marine Sciences (GEMS)
Mathematics
Psychology

Degrees

The bachelor of arts degree is awarded to students satisfactorily completing requirements in the following disciplines:

- American studies
- chemistry
- communication studies
- criminal justice
- economics
- English
- filmmaking, television and radio
- French
- German
- global studies
- graphic design
- history
- integrated sciences and math
- journalism
- liberal studies: environmental emphasis
- liberal studies: marine ecological emphasis
- mathematics
- organizational psychology
- philosophy
- political science
- psychology
- public relations
- sociology
- Spanish
- web design

The bachelor of science degree is awarded to students satisfactorily completing requirements in the following disciplines:

- biochemistry
- biology
- behavioral neuroscience
- chemistry, environmental sciences
- geosciences
- health sciences
- marine sciences

General Liberal Arts and Sciences Studies (GLASS) includes all students who are undecided regarding the selection of a major. For GLASS, specially designated advisors are assigned to help students explore the full range of their academic options. Students have until the completion of 60 credits to select a major. When the major is declared, a new advisor from that field is assigned for course selection and continued academic guidance. For additional information: <http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-sciences/undeclared-majors>

Graduation Requirements

All students majoring in the College of Liberal Arts and Sciences must complete 120 credits that include the Liberal Arts and Sciences core requirements, required courses for major(s) and/or minor(s), and potential electives, the last 30 of which must be taken at Rider. To

graduate, all students must complete the LAS core and earn a 2.0 or higher GPA, both cumulative and in the major, and, if applicable, in the second major or minor.

Minor Programs

The College of Liberal Arts and Sciences offers minors in the following areas:

- American studies
- biology
- chemistry
- Chinese
- Chinese and Asian area studies
- communication studies
- film and media studies
- filmmaking, television and radio
- earth and environmental sciences
- economics
- English literature
- ethics
- European area studies
- event planning and production
- film and media studies
- French
- gender and sexuality studies
- German
- global studies
- graphic design
- history
- homeland security
- Italian
- journalism
- Latin American and Caribbean area studies
- law and justice
- marine sciences
- mathematics
- multicultural studies
- philosophy
- physics
- political communication
- political science
- psychology
- public relations
- science for business
- social work
- sociology
- Spanish
- sustainability studies
- web design
- writing or cinema studies

In addition, the **College of Business Administration** offers minors in health administration, sales, and sport studies available to all Rider students; minors in computer information systems, entrepreneurship,

finance, and general business available to non-business majors; a minor in advertising available to communication and journalism majors; and a minor in advertising available to English majors.

Students interested in pursuing a minor need the approval of the chairperson or director of the minor program and the dean.

Independent Research and Study

Students who wish to explore specific topics of inquiry as a result of course work may take up to 12 semester hours of independent research and study toward graduation. To be eligible for independent research and study a student must be a junior or a senior in good academic standing. Only one project can be scheduled per semester, and for no more than four credit hours. Each independent research and study proposal must be approved by a faculty sponsor, the department chairperson, and the Dean of Liberal Arts and Sciences by no later than the third week of the semester in which the project is to be conducted. Planning for independent research and study should begin during the semester prior to when the student will register for the credits.

Internships

Internships are unique opportunities for connecting the skills and theories learned in the classroom to experiences in the workplace. They also provide students a chance to explore future career goals while earning academic credit. Students may apply up to 8 semester hours of internship toward graduation. To be eligible for an internship, a student must be a junior or senior in good academic standing. Only one internship can be scheduled during a semester. The number of credits earned is based on departmental policy and the number of hours completed at the internship site, usually 1-4 credits. A faculty sponsor, the department internship coordinator and the Director of Student Academic Services of Liberal Arts and Sciences must approve the internship by no later than the third week of the semester in which the internship is to be completed.

Preparation for the Study of Medicine and Dentistry

The College of Liberal Arts and Sciences offers a premedical studies advising program that focuses on preparation for admission to medical, dental, or other health-related professional schools such as chiropractic and podiatry. A background in the liberal arts also is provided, since many professional schools stress a broad general education.

A premedical committee and pre-professional advisors meet on a regular basis with students to assist in the selection of science and non-science courses, to provide information on the MCAT and DAT, and to advise students regarding procedures for admission to professional schools. As admission requirements vary slightly from school to school, students are urged to consult catalogs of the institutions where they desire to continue their education to make certain that they are completing the most appropriate undergraduate courses.

Students may major in any field of study and need not formally major in one of the sciences as long as they take the minimum number of required science courses. As a matter of practice, however, most pre-dental and premedical students major in biology, behavioral neuroscience, biochemistry, or chemistry. Students who intend to enter medical doctor programs must excel to ensure adequacy of preparation and favorable consideration of their applications.

Preparation for Study in Allied Health Programs

The College of Liberal Arts and Sciences offers pre-allied health professions advising that focuses on preparation for admission to allied health professions such as nursing, physical therapy, sports medicine, physician assistant, occupational therapy, diagnostic imaging and radiologic sciences, medical laboratory sciences and pharmacy. Each of these disciplines has different prerequisite science and non-science coursework and other experiential requirements, and these may vary among institutions. There are also multiple pathways to bachelor's, combined bachelor's/master's, entry level master's degrees, or doctoral degrees in many of them.

The pre-allied health advisor at Rider offers ongoing availability to help students educate themselves on these varying professional fields and the requirements for entry into them. Students are also urged to consult with admissions personnel at institutions in which they seek to study in order to ensure that they are preparing competitive applications.

Rider University maintains an affiliation agreement with the College of Health Professions at Thomas Jefferson University. This program is designed for students seeking to complete 1-2 years of prerequisite coursework prior to transferring to Thomas Jefferson University to complete a bachelor's or combined bachelor/master's program in occupational therapy, nursing or diagnostic imaging.

Advertising Minor for Communication and Journalism Majors

Curriculum Overview

An advertising minor prepares students for a career in advertising agencies, large or small, or in the advertising or promotion departments of profit or nonprofit organizations. Possible entry-level positions include media buyer, copy writer, and assistant account executive. This minor offers students courses that combine business classes along with the study of communications to help students understand business and

marketing functions and how they correlate to verbal and written skills. It emphasizes the role of advertising/promotions within the marketing communications strategy.

Minor Offered

- Minor in Advertising

Advertising Minor Requirements for Communication and Journalism majors

(30 credits)

The College of Business Administration offers a minor in advertising available to communication and journalism majors.

COM 105	Communication, Culture and Media	3
COM 212	Publication Design	3
COM 240	Public Relations	3
COM 360	Adv Publicatn Design & Present	3
MKT 200	Marketing Principles	3
MKT 205	Advertising Principles	3
MKT 320	Consumer Behavior	3
ADV 311	Advertising Copy and Layout (Prerequisite(s) MKT 205, COM 212. Required for advertising majors)	3
ADV 315	Media Planning and Strategy	3
ADV 435	Advertising Campaigns	3
Total Credits		30

Note: Students must achieve a minimum GPA of 2.0 in the minor with no grade lower than a "C-".

Courses and Descriptions

ADV 311 Advertising Copy and Layout 3 Credits

This course focuses on the development and planning of creative and strategic advertisements for a variety of products. The course includes creating concepts for ads, designing ads, and writing copy for all media. The student will become familiar with the activities and responsibilities of copywriters and art directors. The relationship between creative advertising and other functions of advertising will be emphasized.

Prerequisite(s): either ADV 200 or MKT 205 and COM 212. Required for advertising majors.

ADV 315 Media Planning and Strategy 3 Credits

This course focuses on the essential principles, measurements, procedures and problems encountered in determining appropriate media in which to place specific kinds of advertising messages designed to reach closely defined target audiences. The advantages and disadvantages of all media will be discussed from an advertising perspective. Specific audience and cost calculations and analyses will be used to develop comprehensive media plans.

Prerequisite(s): either ADV 200 or MKT 205. Required for advertising majors.

ADV 435 Advertising Campaigns 3 Credits

This capstone course for advertising majors provides an opportunity for students to plan comprehensive advertising campaigns. Coverage includes segmentation research, creative development of the campaign, media planning, and determining advertising effectiveness. Integration of advertising into the marketing program will be emphasized. Required for advertising majors.

Prerequisite(s): ADV 311, ADV 315; advertising major or minor, senior standing or permission of instructor.

COM 105 Communication, Culture and Media 3 Credits

Provides a detailed investigation and analysis into the nature, history, scope, adequacy, and limitations of mass communication and examines the reciprocal influence of the media on culture and society.

COM 211 Copy Editing 3 Credits

Teaches all phases of copy editing for news and public relations: marking of copy, online editing, fact checking, building and shaping news and feature stories, applying mechanical style, building an ear for graceful English, and safeguarding against legal and ethical problems. Provides comprehensive review of grammar, spelling and punctuation, along with intensive practice in writing headlines and captions and editing wire copy.

Prerequisite(s): COM 102.

COM 212 Publication Design 3 Credits

Explains theories, principles, and techniques of print media layout and design. Provides an understanding of the use of type and art as design elements in various publication formats, such as newspapers, newsletters, advertisements and brochures. Directs students to apply these concepts to the creation of published materials using Adobe Creative Suite.

COM 240 Public Relations 3 Credits

Introduces current theories and practices of public relations, with emphasis on facilitating two-way communication with various publics. Explores approaches to public relations problems by critically analyzing case studies and applying theories and techniques to realistic situations.

COM 360 Adv Publicatn Design & Present 3 Credits

Builds on elementary knowledge of graphic design to teach the principles of advanced layout, and computer graphics. Introduces students to industry standard drawing software and builds on their knowledge of layout software gained in the prerequisite course. Provides an understanding of the use of logos, infographics and magazine layout, and of the theoretical bases of color for print production.

Prerequisite(s): COM 212.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MKT 205 Advertising Principles 3 Credits

Basic theory, functions, principles, and applications of advertising are the focus of this course. The relation of advertising to our economy, the advertising department and the ad agency, selection of media, advertising practices, and the use of research to improve advertising techniques are covered.

Prerequisite: MKT 200. Required for advertising majors.

MKT 320 Consumer Behavior 3 Credits

The nature and determinants of consumer behavior are studied, with attention given to the influence of socio-psychological factors such as personality, small groups, demographic variables, social class, and culture on the formation of consumer attitudes, consumption patterns, and purchasing behavior.

Prerequisite(s): MKT 200; Required for advertising majors.

American Studies

Program Overview

American studies is an interdisciplinary major that explores American culture and identity. Students take classes in literature, history, film, food, media, music, philosophy, art and politics to achieve a multi-layered understanding of today's society and what it means to be American. American studies has an intimate, open atmosphere and a curriculum unencumbered by traditional disciplinary boundaries, a place for freewheeling conversations about the American experience.

American studies is also an ideal double major. The flexibility of the program makes it possible to combine American studies with other majors.

Curriculum Overview

The program includes travel courses to great American cities such as New Orleans, Charleston and Memphis. Other courses include hip-hop, Alfred Hitchcock, American technology, the American West, rock 'n' roll, American cinema, Martin Luther King, Live on Broadway (which includes trips to New York City) and sports in American life.

These courses explore American culture from different perspectives, help broaden career choices, by building unique networking opportunities and provides individual attention from professors who can help you find jobs in a variety of fields.

Rider's American studies program prepares students for careers in public policy, law, education, journalism, film, music, arts administration, library science and publishing.

American Studies faculty are among the best teachers and most published scholars at Rider, recruited from history, English, sociology, philosophy, education, business, legal studies, and fine arts. Many have published major books and written for publications such as *The New York Times*, *The Washington Post* and prominent academic journals. They have appeared in major media outlets such as NPR, CNN, and CBS.

American Studies Honors Program

A limited number of superior students enrolled in the American Studies major or minor programs may participate in a program leading to graduation with Honors in American Studies. Interested students should apply to the departmental Committee on honors before March 1st of their junior year; admission is based on academic average and submission of an acceptable proposal for an individual study project. Honors in American Studies is awarded on the basis of completing the senior thesis.

Notes:

1. For course placement information see <http://www.rider.edu/offices-services/orientation/course-placement>.
2. Please note that elective credits may be used to complete requirements in a second major or minor.

AMS 200 Introduction to American Studies 3 Credits

An introduction to various historical definitions of the American experience or national identity, to selected topics which have been used to explain that identity, and to methods of study in the field.

AMS 210 Growing Up American 3 Credits

Studies the maturation and socialization process in modern America through comparative analysis of autobiographical texts and students' personal experiences. Texts represent the experiences of young Americans of both sexes and of different class, racial, ethnic, religious, and regional backgrounds.

AMS 211 Sports in American Life 3 Credits

Literary, sociological, and psychological views of sports in 20th-century American life are examined, focusing on sports as a symbol and reflection of our ideals and tensions.

AMS 212 Multicultural America 3 Credits

Focusing primarily on the new century, this course explores the experiences of the remarkably diverse range of ethnic groups who have come to the U.S. in recent years, including Hispanics, Europeans, Asians and Africans. How these groups have impacted the communities where they have settled, how they have interacted with other ethnic groups, and how they have assimilated (or not) and prospered (or not) are among the issues examined and discussed.

AMS 213 American Myth in Literature, Landscape, and Music 3 Credits

A study of the New World and related myths from an interdisciplinary perspective. Students will read essays, fiction, and poetry by Poe, Melville, Emerson, Whitman, James, and others. Paintings and musical works embodying New World concepts will be examined in connection with the above authors.

AMS 214 Special Topics in American Studies 3 Credits

Studies in specialized areas of American culture, including travel courses to New Orleans and Spoleto USA. Topics change each semester and are listed in the course roster.

AMS 215 Alfred Hitchcock in America 3 Credits

Explores the influence of American culture on the films of Alfred Hitchcock following his immigration to the United States. Students will study one of the cinema's greatest auteurs through the lens of American culture and its impact on Hitchcock's European sensibility. Also explores the reverse dynamic: how Hitchcock transformed American cinema.

AMS 225 American Folklore 3 Credits

An introduction to folk language, custom, and material culture in the United States. Proverbs; myths, legends, and tales; superstitions; music; arts and crafts are treated from both aesthetic and social perspectives. Students will collect and examine folklore within their own cultural contexts.

AMS 226 The New South in Literature, Music and Film 3 Credits

An exploration of Southern culture since World War II and how it has influenced American society as a whole. In literature, music, and film, the Sun Belt has been a significant, innovative region. From the spread of New Orleans jazz through the plays of Tennessee Williams to the fiction of Flannery O'Connor, Southern art has helped shape the larger American culture; this course examines that influence from an interdisciplinary perspective.

AMS 227 Philosophy of Martin Luther King Jr. 3 Credits

A study of Martin Luther King, Jr.'s philosophical writings and his impact on civil speeches and sermons, and critical assessments of the significance of his thought.

AMS 228 Studies in American Jewish Culture 3 Credits

Focuses on important fiction, criticism, social/philosophical commentary, history, and films by 20th-century Jewish American intellectuals, including Michael Gold, Anzia Yezierska, Saul Bellow, Bernard Malamud, Philip Roth, Cynthia Ozick, Grace Paley, Rebecca Goldstein, Art Spiegelman, Arthur Hertzberg, Leslie Fiedler, Chaim Potok, Woody Allen, and David Mamet.

AMS 229 American Popular Culture 3 Credits

An exploration of American popular culture and its profound impact on both the United States and the rest of the world. Pop-culture theorists regard American culture as a dominant force; this course examines the development of this trend from historical, political, and artistic perspectives.

AMS 250 America and the Future 3 Credits

Examines the projections of the American future in terms of the past and present. Emphasizes American studies methodologies, drawing upon philosophical, literary, environmental, and other varieties of futuristic speculations.

AMS 304 Technology and Science in America 3 Credits

An overview of the development and impact of technology and science on American institutions. Topics include innovation, economic growth, science and its relation to technology, social theory, and the politics of science.

AMS 305 Religion in America 3 Credits

Introduces the changing patterns of American development from the sectarianism of colonial America to the pluralism and growing secularism of the 20th-century American religious scene.

AMS 306 Poetry and Poetics in American Culture 3 Credits

Examines American poetry and poetics in relation to American culture and history of the 18th through the 21st centuries. Students read poems and statements about poetry, view artworks, hear recordings, and examine hypertext versions of poems.

AMS 309 Hip Hop and American Culture 3 Credits

Examines and critiques hip hop as a part of American culture. Students will engage with scholarship from several fields in studying the social conditions that fostered the creation of hip hop music, and discuss how these conditions have and/or have not changed in America since the 1970s, when hip hop was born. Students will delve into such issues as how women relate to hip hop, hip hop poetics and rhyme structures, race relations in hip hop, censorship, and the ethics and legalities of digital sampling.

AMS 310 American Identity in the Arts 3 Credits

Studies the place of the arts and the position of the creative artist in contemporary American society, with particular emphasis on the problems of the artist's search for an American identity in the complex cultural milieu.

AMS 311 Radicalism in 20th-Century America 3 Credits

Discusses a number of radical intellectual, literary, and political movements, organizations, and parties from the points of view of their members and leaders, and their historical genesis and development within the context of 20th-century American political life.

AMS 312 American Photography 3 Credits

An intensive analysis of the documentary, aesthetic, and expressive significance of photography in American culture from 1850 to the present. Particular emphasis on the interrelationships between photography and developments in American history, painting, literature, and the social sciences. This course does not deal with the technical aspects of still photography.

AMS 338 Social Impact of Rock and Roll 3 Credits

Explores rock and roll music as a communication medium of American popular culture. The focus is on both how rock and roll music has influenced, and is influenced by, society. It addresses the origins, development and impact of rock music in relation to some of the critical cultural dynamics that provided not only its context, but also much of its content.

AMS 350 American Gothic 3 Credits

An introduction to American Gothic literature as a genre, including its historical development, governing conventions, politics, and aesthetics, as well as its emotional and cultural impact.

AMS 400 Seminar in American Studies I 3 Credits

A study of arts and letters in America from the Puritan period through the Civil War. Should be taken junior year if possible.

Prerequisite(s): AMS 200.

AMS 401 Seminar in American Studies II 3 Credits

A study of arts and letters in America from Reconstruction to the present. Should be taken junior year if possible.

Prerequisite(s): AMS 200.

AMS 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

AMS 491 Internship in American Studies 1-4 Credits

A supervised work experience in an approved organization to gain knowledge of various manifestations of American society in workplace settings. Placements can be made in business, government, and non-profit organizations and local grassroots movements that draw on the knowledge acquired in the American studies curriculum.

Behavioral Neuroscience

Program Overview

The Behavioral Neuroscience major educates the next generation of scientists with a foundation in biological sciences and behavioral neuroscience. Students in the behavioral neuroscience major are prepared to join the workforce or attend professional or graduate school. Rider achieves this through small class and laboratory sizes, faculty accessibility, and guidance tailored to each student's needs. Areas of professional and graduate study include medical, dental, and veterinary school; allied health programs in optometry, podiatry, physical therapy, occupational therapy, nursing; as well as programs leading to M.S. or Ph.D. degrees in the life sciences; and programs in science education.

Students in this major can have direct, hands-on instruction and guidance through the Science Learning Community (SLC). The SLC was established to provide academic and social support for science majors and is open to all students studying science. The program includes residence hall-based tutoring and mentoring programs, as well as social programming for science majors to enhance their knowledge and experience outside of the classroom.

Many graduates of the Behavioral Neuroscience program have pursued graduate studies at prestigious institutions including Johns Hopkins University, University of Pennsylvania, Dartmouth College and Cornell University. Others have entered medical school, or have gone on to become educators, surgical assistants, marine biologists, mental health technicians, nurses, behavioral therapists, occupational therapists or physical therapists.

Curriculum Overview

The curriculum for majors has been shaped to prepare students for a life of learning in the sciences. Rider's faculty are research-oriented, and encourage students to take advantage of the opportunity to engage in independent research and internships. Students are expected to gain knowledge, and develop technical and analytical skills and competency in writing and speaking. Classes include coursework focused on the principles of evolution and diversity, neuroscience, and psychology, among other courses. Students also have the opportunity to take part in three-week internship courses through the Capital Health System Hospitals, summer research and other off-site internships.

Honors Programs

Honors in Behavioral Neuroscience

The objective of the honors program in Behavioral Neuroscience is to introduce talented undergraduate majors to the methods of basic research in behavioral neuroscience. Qualified biology or behavioral neuroscience majors may participate in the Departmental Honors program. For consideration, a student must have at least a 3.25 overall grade point average at the end of their junior year. In the senior year, a student seeking Honors must write and orally defend a written honors thesis based upon their independent research. A candidate who has a 3.25 cumulative average, a 3.5 average in their science courses, and who has completed an acceptable Honors Thesis, will be awarded Honors in Behavioral Neuroscience upon graduation.

Beta Beta Beta Biological Honor Society

"Tri-Beta" is a national honor society affiliated with the American Association for Advancement of Science and the American Institute of Biological Sciences. Invitations for membership are extended to majors in the life sciences who have demonstrated superior academic achievement. Students are usually invited to join in their sophomore year when they have accumulated 12 credits in the sciences. Active membership is available to those with an overall grade point average of at least 2.8, and at least 3.0 in their science courses. The benefits of membership include academic recognition; a subscription to the journal *Bios*, to which members may submit research articles; opportunities to present papers at conventions; and research awards. Behavioral neuroscience majors should make membership in Tri-Beta one of their goals.

Pre-medical and Pre-allied Health Advising Programs

The premedical studies and pre-allied health advising programs assist students with academic and extra-curricular planning required to become competitive applicants for programs in the health professions.

Rider and Thomas Jefferson University have a long-standing articulation agreement for students who wish to pursue training in the allied health professions. This agreement does not guarantee admission of Rider students into Jefferson's programs; it does mean that Rider faculty members are familiar with Jefferson's academic requirements and that Rider's courses are eligible for transfer to Jefferson.

Select one (1) of the following:		4

Any additional BNS 300-level course with a lab

Any PSY 300-level course with a lab

Any BCH 200 or higher course with a lab

Senior Capstone Seminar		
BNS 415	Seminar in Behavioral Neuroscience	3

Total Credits 51-54

¹ Students must earn a grade of "C" or better in this course to meet the major requirements and before enrolling in upper-level courses for which these courses are prerequisites.

² Students must place into MTH 105 Algebra & Trigonometry or higher level mathematics in order to register for BIO 115, BIO 116 and BNS 275.

Course Repeat Policy

The following guidelines apply to courses offered by the Department of Biology. Students may repeat any biology (BIO) or behavioral neuroscience (BNS) course once without special permission. A course will be considered repeated if the student has previously earned a letter grade in the course, or if the student has previously withdrawn from the course during Withdrawal II or Withdrawal III. If a student wishes to retake a biology or behavioral neuroscience course a third time, written permission must be obtained from the departmental chair before the registrar will allow the student to enroll in that course.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Notes:

1. Please note that elective credits may be used to complete requirements in a second major or minor.
2. Natural and Physical Sciences and Mathematics core requirement included in a major.

Courses and Descriptions**BNS 107 Life Science: Brain and Behavior 3 Credits**

An introduction to the biology of the human brain and the rest of the human nervous system. Topics in neuroscience are covered in molecular, cellular, and systematic terms. Additional material is presented on the origins and effects of neurological and psychiatric diseases.

BNS 250 Biostatistics 4 Credits

This course will assist students with acquiring the skills necessary to design, conduct, and interpret research studies. Emphasis will be on learning how to develop experimental designs to translate theoretical concepts into testable hypotheses. Experiments conducted during laboratory sessions will use laboratory mice and will use equipment for measuring animal behavior. Students will gain experience collecting, analyzing, writing and orally presenting their research results. Three hours of lecture and one three-hour lab per week. Prerequisite(s): MTH 105 or higher or placement into MTH 210, grade of "C" or better in one lab science course.

Corequisite(s): BNS 250L.

BNS 250L Biostatistics Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Corequisite(s): BNS 250.

BNS 275 Behavioral Neuroscience 4 Credits

An introductory behavioral neuroscience course including basic neuroanatomy and neurophysiology of movement, ingestive, reproductive, emotional, and learning behaviors. Emphasis is on the structure/function relationships that allow animals to make appropriate physiological and behavioral responses to the environment. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115 & BIO 116.

Corequisite(s): BNS 275L.

BNS 275L Behavioral Neuroscience Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BNS 275.

BNS 310 Neurobiology 4 Credits

A lecture-laboratory course investigating the structure and function of the nervous system. Lecture topics include organization of the nervous system, neuroanatomy, neurophysiology, neurochemistry, physiology of sensory systems, biological aspects of nervous system diseases, and behavior. Laboratory exercises include study of anatomy of the nervous system, nerve cell recording, modern neuroanatomical techniques, and the neural basis of animal behavior. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116. Corequisite(s): BNS 310L.

BNS 310L Neurobiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BNS 310.

BNS 360 Neurochemistry 4 Credits

Examines the fundamentals of neurochemistry, including the neuroanatomical distribution, pharmacology, and functions of neurotransmitters; signal transduction pathways; behavioral and physiological effects of chemicals either used therapeutically to treat biopsychological disorders or that may be abused for their psychotropic effects; and mechanisms and models for the study of drug action. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116, CHE 122, CHE 123.

Corequisite(s): BNS 360L.

BNS 360L Neurochemistry Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Corequisite(s): BNS 360.

BNS 375 Neuroethology:circuits of Behavior 4 Credits

Neuroethology is the study of the neural and physiological basis of animal behavior. This course focuses on the specific behavioral problems faced by animals in their natural habitats, and the ways in which their nervous systems solve these problems. The mechanisms that underlie complex behaviors such as spatial orientation and navigation, escape mechanisms, and animal communication will be examined, as well as the extraordinary sensory adaptation of organisms to their environments (e.g., echolocation, electroreception, and magnetic reception). The neural control of motor programs and temporally-patterned behaviors will be studied in simpler neuronal systems. Finally, recent cellular and molecular approaches to the study of behavior will be addressed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115.

Corequisite(s): BNS 375L.

BNS 375L Neuroethology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BNS 375.

BNS 415 Seminar in Behavioral Neuroscience 3 Credits

Critical analysis of the scientific literature pertaining to current topics in behavioral neuroscience. Topics include mechanisms through which the brain influences physiology and behavior and the integration of nervous and endocrine systems. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116 or BNS 118, BIO 117, junior standing and permission of instructor.

BNS 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

BNS 491 Internship in Behavioral Neuroscience 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations. These can include educational or research institutions. The method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and should include keeping a journal of activities, a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of the instructor.

Biochemistry

Program Overview

Students in the biochemistry major will find themselves taking part in small classes that encourage close and frequent interaction between students and professors, helping to create a stimulating learning environment.

Students in this major are offered abundant research opportunities (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-sciences/science-programs/chemistry-biochemistry-physics/chemistry-biochemistry-student-research>) both during the academic year and during the summer months. Faculty are engaged in research projects which lend themselves to undergraduate participation. In tackling the challenge of advanced and independent laboratory work, students begin to understand the nature of science and the scientific method. Participation in research by all students is strongly encouraged, as it builds a greater appreciation of the nature of their chosen field. The opportunity to perform independent research has motivated many students to continue their education either in an accredited graduate program or in a professional school in a number of medical fields.

Often, faculty and students jointly present their research results either at national professional meetings, the Rider Independent Scholarly Research & Creative Activities Presentations (ISCAP) Day, or as written research papers submitted to scholarly journals.

The major has been approved by the American Chemical Society (ACS), which means that classes are nationally and internationally recognized as providing adequate experimental skills, oral and written communication skills, and knowledge that prepare students to be future professionals.

Curriculum Overview

Core chemistry classes include a year of general chemistry, a year of organic chemistry, a year of biochemistry, three semesters of general biology and courses in quantitative analysis, physical chemistry and genetics.

Students also must earn advanced course credits at the 300 level or above in chemistry, biochemistry, biology or behavioral neuroscience.

Independent research, BCH 490, is also a requirement of the biochemistry major.

Courses and Descriptions

BCH 225 Introduction to Organic and Biochemistry 4 Credits

An introductory course describing the basic principles of organic chemistry and biochemistry as they relate to human metabolism and disease. The nature of the chemical structure and reactivity of organic functional groups such as alcohols, aldehydes, ketones, carboxylic acids and amines will be presented with biological processes in mind. The biochemistry of the macromolecules DNA, RNA, proteins, carbohydrates and lipids will be discussed leading in to a discussion of some of the more important metabolic pathways. This course is intended for science majors who do not take the full two semester sequence of organic chemistry and two semesters of biochemistry and desire a background in biochemistry. Non-science major students who have had one semester of general chemistry and one semester of biology may also enroll in the course. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 120, CHE 121; BIO 115 or BIO 117.

Corequisite(s): BCH 225L.

BCH 225L Intro to Organic & Biochem Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BCH 225.

BCH 325 Biochemistry I 3 Credits

Outlines the chemistry and biological function of carbohydrates, proteins, lipids, nucleic acids, vitamins, and enzymes, and introduces enzyme kinetics and biological energetics. Degradative metabolic pathways of carbohydrates and lipids, and their controlled interrelationships are discussed in detail.

Prerequisite(s): CHE 214.

BCH 326 Biochem and Enzymology I Lab 1 Credits

The laboratory work illustrates techniques and methods essential to the biochemist. Methods for quantification of proteins, purification of enzymes and determination of their kinetic parameters, polarimetry, and structure proof of carbohydrates. The lab must be taken concurrently with BCH 325 by biochemistry and biology majors, but is optional for others.

Prerequisite(s): CHE 123, CHE 214.

BCH 330 Biochemistry II 3 Credits

Continuation of Biochemistry I. Includes molecular analysis of biological membrane structure and function and a molecular level analysis of information flow from DNA through RNA to proteins. Other topics include mechanisms of hormone action and an expansion on metabolic concepts.

Prerequisite(s): BCH 325.

BCH 331 Biochemistry II Lab 1 Credits

Methods of protein analysis, building on techniques and principles learned in BCH 326. Students will use bioinformatics and molecular biological techniques, including PCR, to harness and change protein sequence. They will implement modern protein purification techniques, develop enzyme essays, and perform equilibrium binding assays to investigate the relationships among protein sequence, structure, and function.

Prerequisite(s): BCH 326, BIO 117.

BCH 425 Medicinal Chemistry 3 Credits

A comprehensive description of the important principles of medicinal chemistry including principles of rationale drug design with synthetic strategies, mechanisms of drug actions, structure-activity relationships, the absorption, distribution, metabolism and elimination of drugs. Specific classes of drugs to be discussed include: anticancer agents, analgesics, anti-inflammatory drugs, steroids, drugs acting on the nervous system and antibiotics.

Prerequisite(s): BCH 325 or permission of instructor.

BCH 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurement, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

BCH 491 Internship in Biochemistry 1-4 Credits

A supervised research experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit or governmental organizations under the guidance of a mentor. The mentor and student will have regular consultation with the departmental internship coordinator to assess the student's progress. Normally, 50 hours of internship per credit is required. The grade for the course will be determined by the students' overall performance in their research work, a research paper documenting their work with their internship mentor and an oral or poster presentation at the end of the semester.

Prerequisite(s): 2.5 GPA and permission of the instructor.

Biology

Program Overview

Rider's biology major educates the next generation of scientists by providing students with a foundation in the life sciences that prepares them to join the workforce or attend professional or graduate school. Rider achieves this through small class sizes, inquiry-based laboratory experiences, and faculty dedicated to the teacher-scholar model of science education. Areas of professional and graduate study pursued by students in this major include medical, dental, and veterinary school; allied health programs such as optometry, podiatry, physical therapy, occupational therapy and nursing; programs leading to Ph.D. degrees in the life sciences; and programs in science education.

Graduates of the biology program have pursued their graduate studies at prestigious institutions such as John Hopkins University, Cornell University, Princeton University, University of North Carolina at Chapel Hill, University of Pennsylvania, Harvard University, Dartmouth College and The Scripps Research Institute among others.

Curriculum Overview

The curriculum for biology majors is structured to prepare students for a life of learning in the sciences. Students are expected to master content, develop technical skills, analytical skills and competency in oral and written communication. Foundational courses in biology, chemistry, physics and mathematics prepare students for the rigor of upper-level courses in microbiology, evolutionary biology, developmental biology, immunology, physiology, plant biology, ecology and neurobiology. Capstone seminars allow students to explore one area of the life sciences in depth through exploration and analysis of original scientific literature.

Rider's science faculty are research-oriented, and encourage students to take advantage of opportunities to engage in independent research.

Honors Programs

Honors in Biology

The objective of the honors program in biology is to introduce talented undergraduate majors to the methods of basic research in the biological sciences. For consideration a student must have a 3.25 average at the end of their junior year. In the senior year, participating students must complete an independent research project and present a written honors thesis. At graduation a student who has a 3.25 cumulative average, a 3.5 average in biology courses, and who has completed an acceptable honors thesis will be awarded Honors in Biology.

Beta Beta Beta Biological Honor Society

"Tri-Beta" is a national honor society affiliated with the American Association for Advancement of Science and the American Institute of Biological Sciences. Invitations for membership are extended to majors in the life sciences who have demonstrated superior academic achievement. Students are usually invited to join in their sophomore year when they have accumulated 12 credits in the sciences. Active membership is available to those with an overall grade point average of at least 2.8, and at least 3.0 in their science courses. The benefits of membership include academic recognition; a subscription to the journal *Bios*, to which members may submit research articles; opportunities to present papers at conventions; and research awards. Biology and behavioral neuroscience majors should make membership in *Tri-Beta* one of their goals.

Pre-medical and Pre-allied Health Advising Programs

The premedical studies and pre-allied health advising programs assist students with academic and extra-curricular planning required to become competitive applicants for programs in the health professions.

Rider and Thomas Jefferson University have a long-standing articulation agreement for students who wish to pursue training in the allied health professions. This agreement does not guarantee admission of Rider students into Jefferson's programs; it does mean that Rider faculty members are familiar with Jefferson's academic requirements and that Rider's courses are eligible for transfer to Jefferson.

Post-baccalaureate pre-medical, pre-dental, and pre-veterinary studies

Rider University offers students with baccalaureate degrees the opportunity to take the undergraduate science course prerequisites for medical, dental, veterinary or graduate school. For more information, visit the Premedical Studies (p. 148) page.

Requirements for the Major

(62-63 credits)

Core Requirements

See LAS Core Page (p. 454)

Both of these foundational courses

BIO 115 & 115L	Principles of Biology I and Principles of Biology I Lab ¹	4
BIO 116 & 116L	Principles of Biology II and Principles of Biology II Lab ¹	4

Select five courses, one of which must be from each group listed below: 20

Group I

BIO 272 & 272L	Intro to Marine Biology and Marine Biology Laboratory	
BIO 321 & 321L	Microbiology and Microbiology Lab	
BIO 335 & 335L	Plant Biology and Modern Plant Biology Lab	
BIO 340 & 340L	Evolutionary Biology and Evolutionary Biology Lab	
BIO 350 & 350L	General Ecology and General Ecology Lab	
BIO 372 & 372L	Behavior of Marine Organisms: Evolutionary Approach and Beh Mar Org: Evol Apprch Lab	
MAR 325 & 325L	Marine Vertebrates and Marine Vertebrates Lab	

Group II

BIO 260 & 260L	Principles of Biology: Evolution, Diversity, and Biology of Cells and Principle of Biology: Cells Lab	
BIO 265 & 265L	Genetics and Genetics Lab	

BIO 300 & 300L	Developmental Biology and Developmental Biology Lab	
BIO 305 & 305L	Vertebrate Physiology and Vertebrate Physiology Lab	
BIO 315 & 315L	Medical Microbiology and Microbiology Lab	
BIO 370 & 370L	Immunology and Immunology Lab	
BNS 310 & 310L	Neurobiology and Neurobiology Lab	
BNS 360 & 360L	Neurochemistry and Neurochemistry Lab	
BNS 375 & 375L	Neuroethology:circuits of Behavior and Neuroethology Lab	
BCH 325 & BCH 326	Biochemistry I and Biochem and Enzymology I Lab	

Mathematics

Select two of the following: 7-8

MTH 105	Algebra and Trigonometry ²	
MTH 210	Calculus I ²	
MTH 211	Calculus II ²	
BNS 250	Biostatistics (plus lab) ²	
or ENV 200	Statistical and Computer Applications in the Natural Sciences	
or MTH 120	Intro to Applied Statistics	

Chemistry ¹

CHE 120 & CHE 121	Principles of Chemistry and Principles of Chemistry Lab	4
CHE 122 & CHE 123	Intro to Chemical Systems and Quantitative Methods Lab	4
CHE 211 & 211L	Organic Chemistry I and Organic Chem I Lab	4
CHE 214 & 214L	Organic Chemistry II and Organic Chemistry II Lab	4

Physics

PHY 100 & 100L	Principles of Physics I and Principles of Physics I Lab	4
or PHY 200 & 200L	General Physics I and General Physics I Lab	
PHY 101 & 101L	Principles of Physics II and Principles of Physics II Lab	4
or PHY 201 & 201L	General Physics II and General Physics II Lab	

Senior Capstone Seminar

Select one of the following:

BIO 400	Seminar in Cellular and Molecular Biology	
BIO 420	Seminar in Organismal Biology	
BIO 416	Bioinformatics	
BIO 450	Seminar in Ecology & Evolution	

Total Credits 59-60

¹ Students must earn a grade of "C" or better in this course to meet the major requirements and before enrolling in upper-level courses for which these courses are prerequisites.

² Students must place into MTH 105 Algebra & Trigonometry or higher level mathematics in order to register for BIO 115 and BIO 116.

Department of Biology Course Repeat Policy

The following guidelines apply to courses offered by the Department of Biology. Students may repeat any biology (BIO) or behavioral neuroscience (BNS) course once without special permission. A course will be considered repeated if the student has previously earned a letter grade in the course, or if the student has previously withdrawn from the course during Withdrawal II or Withdrawal III. If a student wishes to retake a biology or behavioral neuroscience course a third time, written permission must be obtained from the departmental chair before the registrar will allow the student to enroll in that course.

Requirements for the Minor ¹
(20 credits)

Both of these foundational courses		
BIO 115 & 115L	Principles of Biology I and Principles of Biology I Lab ^{2, 3}	4
BIO 116 & 116L	Principles of Biology II and Principles of Biology II Lab ^{2, 3}	4
Three courses, at least one from each group listed below:		12
Group I		
BIO 272 & 272L	Intro to Marine Biology and Marine Biology Laboratory	
BIO 321 & 321L	Microbiology and Microbiology Lab	
BIO 335 & 335L	Plant Biology and Modern Plant Biology Lab	
BIO 340 & 340L	Evolutionary Biology and Evolutionary Biology Lab	
BIO 350 & 350L	General Ecology and General Ecology Lab	
BIO 372 & 372L	Behavior of Marine Organisms: Evolutionary Approach and Beh Mar Org: Evol Apprch Lab	
Group II		
BIO 260 & 260L	Principles of Biology: Evolution, Diversity, and Biology of Cells and Principle of Biology: Cells Lab	
BIO 265 & 265L	Genetics and Genetics Lab	
BIO 300 & 300L	Developmental Biology and Developmental Biology Lab	
BIO 305 & 305L	Vertebrate Physiology and Vertebrate Physiology Lab	
BIO 315 & 315L	Medical Microbiology and Microbiology Lab	
BIO 370 & 370L	Immunology and Immunology Lab	
BNS 310 & 310L	Neurobiology and Neurobiology Lab	
BNS 360 & 360L	Neurochemistry and Neurochemistry Lab	

BNS 375 & 375L	Neuroethology:circuits of Behavior and Neuroethology Lab	
Total Credits		20

¹ Not available to Behavioral Neuroscience, Biochemistry, Health Sciences or Science Education majors.
² Students must earn a grade of “C” or better in this course to meet the major requirements and before enrolling in upper-level courses for which these courses are prerequisites.
³ Students must place into MTH 105 Algebra & Trigonometry or higher level mathematics in order to register for BIO 115 and BIO 116.

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

¹ For course placement information please visit this website (<http://www.rider.edu/offices-services/orientation/course-placement>).

² Please note that elective credits may be used to complete requirements in a second major or minor.

³ Natural and Physical Sciences and Mathematics Core requirements are included in the major.

⁴ PHY Lab must be taken concurrently with paired lecture.

BIO 100 Life Science:Human Emphasis 3 Credits

An examination of mammalian physiology and development at the cellular and organ system level, with emphasis on physiological homeostasis in man. Three hours of lecture per week.

BIO 101 Life Science:Genetics Emphasis 3 Credits

An examination of cell biology and genetics, with emphasis on the impact of these fields on human affairs. Three hours of lecture per week.

BIO 103 Life Sci:Ecobotanical Emphasis 3 Credits

Plant biology with emphasis on ecological interactions and economic uses. Three hours of lecture per week.

BIO 105 Life Science and Society 3 Credits

This course will highlight current scientific knowledge and the state of ongoing inquiry in often-misunderstood topics related to health and medicine. Topics will include, but are not limited to, stem cells, embryo editing, vaccination, genetic modification of food and animals, and the process of drug development. Throughout this course, students will learn basic cell biology and genetics as a foundation for scientific understanding in itself as well as how to detect misconceptions and myths related to science, healthcare, and medicine.

BIO 106 Life Science:Human Disease 3 Credits

An introduction to molecular, cellular, and human biology with emphasis upon diseases and disorders caused by mutation, bacteria, viruses, or parasites. The biology of human aging is also discussed. Three hours of lecture per week.

BIO 108 Life Sci: Biol of Human Aging 3 Credits

An introduction to the biology of aging manifest in the cells, tissues, and organs of animals and humans. Three hours of lecture per week.

BIO 109 From the Big Bang to Origins of Life 3 Credits

This course is a non-major science core course focusing on the interactions among astronomy/physics, chemistry, geology and biology. A consensus story has emerged about our origins from scientific insights obtained over the last 400 years. Many know this story that began with the Big Bang and proceeded through the origin of the galaxies and the origin of the elements to the origin of our sun, earth and solar system. The origin of the earth gave rise to the origin of life, evolution of bacteria, viruses, plants and animals, creation of ecosystems and ultimately the evolution of humans. We will proceed through the science slowly. By doing so we can take the information from all of the sciences and reflect upon it. The result of will be an enhanced appreciation for both the process of science and the awesome information we have learned about the natural world as well as ourselves. The study of our origins reveals that humans, all life, and our planet are intimately related.

BIO 110 Life Science: Inquiry Approach 4 Credits

An introductory course for non-science majors in which students develop an understanding of biological evolution, the molecular basis of heredity, the cell, matter, energy and organization in living systems, and the interdependence of organisms. In addition, students will develop an understanding of science as a human endeavor, the nature of scientific knowledge, and historical perspectives. Through investigative activities, students will develop an understanding about scientific inquiry and develop abilities necessary to do scientific inquiry. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 110L.

BIO 110L Life Sci: Inquiry Approach Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 110.

BIO 115 Principles of Biology I 4 Credits

An introductory biology course focusing on major themes of biology: what is life?; Cells as fundamental structure and functional unit of life; information transmission, storage and retrieval; Diversity and unity of life explained by evolution. Three hours of lecture and one three- hour lab per week.

Corequisite(s): BIO 115L.

BIO 115L Principles of Biology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 115.

BIO 116 Principles of Biology II 4 Credits

An introductory biology course focusing on major themes of biology: Energy and matter to carry out life's essential functions; Interdependent relationships characterize biological systems (homeostasis, growth & development); Behavior of living things; Ecology and the environment. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 116L.

BIO 116L Principles of Biology II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 116.

BIO 206 The Pharmaceutical Industry 3 Credits

An introduction to drug discovery and development. Topics include how drugs are used to diagnose, cure, treat, and prevent disease and how drugs affect body function. The origins of diseases and the early attempts at treatment are also covered. Designed for business majors; does not satisfy requirements for the biology major.

Prerequisite(s): BIO 100 or BIO 101 or BIO 106 or BIO 108 or BNS 107 or CHE 115.

BIO 210 Hospital Intern Program 2 Credits

An internship that provides students with the experience in the practical aspects of medicine. Major departments in the hospital such as the emergency room, operating room, clinic, radiology, and the laboratory will be open for student rotations. Field trips to various medical schools in the area will provide information on professional school educational opportunities available in the health professions.

Prerequisite(s): sophomore standing or above and permission of instructor.

BIO 215 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): BIO 115/115L and BIO 116/116L.

Corequisite(s): BIO 215L.

BIO 215L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 215.

BIO 221 Human Anatomy & Physiology I 4 Credits

A comprehensive survey of the structure and function of musculo-skeletal systems, neuroendocrine systems and related tissues and cellular interactions. Physiological applications include homeostasis, muscle dynamics, and cell activities. Laboratory exercises complement lecture material through the use of animal dissections, wet labs, computer-assisted investigations, microscopy, and models. Exams, case histories, personal investigations, and lab practicums assess learning. Course emphasis supports allied health and pre-professional training. Three hours of lecture and one three-hour lab per week. Designed for allied health students; does not satisfy requirements for the biology major. **Prerequisite(s):** BIO 115.

Corequisite(s): BIO 221L.

BIO 221L Human Anatomy & Physiology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 221.

BIO 222 Human Anatomy & Physiology II 4 Credits

A comprehensive survey of the organ systems of the body including special senses, cardiovascular, respiratory, digestive, excretory, reproduction and development. Physiological components include electrolytes, metabolism, nutrition, and the mechanisms of homeostasis and cell reception. Lab studies support lecture material through dissections, wet labs, computer-assisted learning, microscopy, and models. Assessment includes lab practicums, exams, and reports. Course emphasis supports allied health and pre-professional training. Designed for allied health students; does not satisfy requirements for the biology major. **Prerequisite(s):** BIO 221.

Corequisite(s): BIO 222L.

BIO 222L Human Anatomy & Phys II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. **Prerequisite(s):** BIO 221L.

Corequisite(s): BIO 222.

BIO 260 Principles of Biology: Evolution, Diversity, and Biology of Cells 4 Credits

Lectures and labs focus on basic cell biology. Cell diversity and function, genetics and biotechnology are emphasized. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** BIO 115 & BIO 116.

Corequisite(s): BIO 260L.

BIO 260L Principle of Biology: Cells Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 260.

BIO 265 Genetics 4 Credits

A comprehensive course focusing on molecular, Mendelian, and population genetics. Topics covered will include molecular advances in the study of genetics, including genomics and bioinformatics; evolution and the effects of genetic mutations; the application of population genetics to forensic science; genetic problem solving, including genetic crosses and statistical analysis; and regulation of gene expression. The laboratory for this course will introduce students to commonly used genetic model organisms and basic molecular biology techniques. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** BIO 115, BIO 116.

Corequisite(s): BIO 265L.

BIO 265L Genetics Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 265.

BIO 272 Intro to Marine Biology 3 Credits

Introduces students to the study of marine environments, emphasizing the diversity, ecology, and physiology of marine animals, algae, and plants. Aspects of the human impact on marine environments are also discussed. Prerequisite(s): BIO 115 or BIO 116 or BNS 118 and grade of "C" or better.

Corequisite(s): BIO 272L.

BIO 272L Marine Biology Laboratory 1 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 272.

BIO 290 Special Topics in Biology 3 Credits**BIO 300 Developmental Biology 4 Credits**

Lectures and laboratories explore molecular, cellular, and genetic mechanisms of animal development. Aspects of gametogenesis, fertilization, induction, cytoplasmic determinants, morphogenetic movements, differentiation and developmental evolution are discussed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 300L.

BIO 300L Developmental Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 300.

BIO 305 Vertebrate Physiology 4 Credits

Study of the principles and mechanisms of mammalian physiology. Topics include the nervous system, muscle physiology, cardiovascular physiology, respiration, gastrointestinal activity, renal function, and endocrine physiology. Lectures and laboratory exercises emphasize homeostatic mechanisms and organ-system interactions. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 305L.

BIO 305L Vertebrate Physiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 305.

BIO 315 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116 or BNS 118, BIO 117.

Corequisite(s): BIO 315L.

BIO 315L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 315.

BIO 321 Microbiology 4 Credits

An introduction to the discipline of microbiology, with an emphasis on the biology of prokaryotes found in all the natural realms of our environment, including the oceans, soil, atmosphere, and extreme habitats. Emphasis will be placed on microbial diversity, fundamental microbial processes, and the continual interaction between microbes and the natural environment. Classical and modern methods of identification are introduced in the laboratory. Three hours of lecture and one three-hour lab per week. Some field trips are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 321L.

BIO 321L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 321.

BIO 335 Plant Biology 4 Credits

Biology of seed plants, including growth, development, and reproduction of flowering plants. Emphasis is placed on acclimation and adaptations demonstrating environmental influences on plant structure and function. Current literature involving molecular mechanisms of control will be discussed. Three hours of lecture and one three-hour lab per week. One Saturday field trip. Prerequisite(s): BIO 115, BIO 116, CHE 122.

Corequisite(s): BIO 335L.

BIO 335L Modern Plant Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 335.

BIO 340 Evolutionary Biology 4 Credits

Where did we come from? This course will explore the generation of biological diversity on earth. Course topics will include: the history of evolutionary thought; the different lines of evidence and fields of inquiry that bear on our understanding of evolution; selection vs. random changes in populations over time; speciation; extinction; the molecular basis of evolution; and evolutionary developmental biology. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265.

Corequisite(s): BIO 340L.

BIO 340L Evolutionary Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Corequisite(s): BIO 340.

BIO 350 General Ecology 4 Credits

An investigation of the processes that regulate the distribution of plants and animals throughout the biosphere. Relationships among species and their interactions with the environment are stressed. Quantitative analyses of experimental results and current research in basic and applied ecology are discussed. Laboratory activities explore conceptual models using both field activities and computer simulations. Three hours of lecture and one three-hour lab per week. One Saturday field trip (laboratory time will be adjusted accordingly). Prerequisite(s): Two of the following: ENV 100 with a grade of "B" or better; BIO 115, BIO 116, with a grade of "C" or better in each course.

Corequisite(s): BIO 350L.

BIO 350L General Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 350.

BIO 370 Immunology 4 Credits

An introduction to the cells and molecules of the immune system with emphasis on recent advances. Topics include AIDS, autoimmunity, transplantation, and cancer. Readings from current journals will be discussed and presented by students. The laboratory will introduce current research techniques and then apply these to a research problem with critical analyses of the data generated. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 370L.

BIO 370L Immunology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 370.

BIO 372 Behavior of Marine Organisms: Evolutionary Approach 4 Credits

An examination of the underlying mechanisms and evolutionary causes of behavior, including habitat use, feeding, and mate choice, particularly in marine organisms. The laboratory will involve collecting, analyzing and interpreting field data and performing experiments in the lab using a variety of marine organisms including fish and crabs. Three hours of lecture and one three-hour lab per week. Some full-day field trips (usually on a weekend) are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 372L.

BIO 372L Beh Mar Org: Evol Apprch Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 372.

BIO 400 Seminar in Cellular and Molecular Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in cell and molecular biology. Topics may include: genomics, regulation of gene expression, development, and molecular processes of disease. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116, BIO 260, junior standing, and permission of instructor.

BIO 416 Bioinformatics 3 Credits

A comprehensive overview of relevant computer-based technologies used in genome research, DNA sequence analysis, and evolutionary biology. Will focus extensively on Internet resources and predictive algorithm usage for determining evolutionary relationships of organisms based on molecular evidence. Lectures will focus on terms and concepts frequently used in genomic and bioinformatic research, while computer labs will allow students to perform hands-on projects with actual DNA sequence data.

Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265 (recommended); Junior standing or Permission of the Chairperson.

BIO 420 Seminar in Organismal Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in physiology and organismal biology. Topics may include hormonal control of behavior, immune pathogen interactions, and other aspects of whole animal and/or plant biology. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 450 Seminar in Ecology & Evolution 3 Credits

Critical analysis of the scientific literature pertaining to current topics in ecology and evolutionary biology. Ecology and evolution of terrestrial and aquatic systems may include scales of adaptation, mechanisms, or human impacts. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

BIO 491 Internship in Biology 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations. These can include educational or research institutions. The method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and should include keeping a journal of activities, a term paper or project report and a poster presentation. 2.5 GPA required.

Prerequisite(s): Permission of the instructor.

Chemistry B.S.; Chemistry B.A.

Program Overview

Students in the chemistry major will find themselves taking part in small classes that encourage close and frequent interaction between students and professors, helping to create a stimulating learning environment.

Students in this major are offered abundant research opportunities (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-sciences/science-programs/chemistry-biochemistry-physics/chemistry-biochemistry-student-research>) both during the academic year and during the summer months. Faculty are engaged in research projects which lend themselves to undergraduate participation. In tackling the challenge of advanced and independent laboratory work, students begin to understand the nature of science and the scientific method. Participation in research by all students is strongly encouraged, as it builds a greater appreciation of the nature of their chosen field. The opportunity to perform independent research has motivated many students to continue their education either in an accredited graduate program or in a professional school in a number of medical fields.

Often, faculty and students jointly present their research results either at national professional meetings, the Rider Independent Scholarly Research & Creative Activities Presentations (ISCAP) Day, or as written research papers submitted to scholarly journals.

The major has been approved by the American Chemical Society (ACS), which means that the program is nationally recognized as providing adequate experimental skills, oral and written communication skills, and knowledge that prepare students to be future professionals in the chemical sciences. Chemistry students at Rider University have challenging and engaging experiences in the five areas of chemistry: analytical, inorganic, organic, and physical chemistry, as well as biochemistry.

Curriculum Overview

Core chemistry classes include one year of general chemistry, one year of organic chemistry, quantitative analysis, biochemistry, physical chemistry

and inorganic chemistry. Students also must take calculus and general physics I and II. Advanced chemistry courses include biochemistry II, medicinal chemistry, physical organic chemistry, chemical bonding, and others. Students must also earn four lab credits from the following courses: biochemistry I lab, biochemistry II lab, advanced organic synthesis and spectroscopy, computational chemistry lab, and physical organic chemistry.

Degrees Offered:

- B.S. in Chemistry
- B.A. in Chemistry

1. CHE 420 counts as a three credit course and one lab credit only.
2. Lab courses count for one or two credits (see course descriptions).

Bachelor of Arts Option

The curriculum described above is for a Bachelor of Science program that is approved by the American Chemical Society (ACS) and carries with it a certification that graduates with the B.S. degree are recognized by the ACS. All students admitted to the School of Liberal Arts and Sciences seeking a chemistry degree will be enrolled in the B.S. program. However, there is the option to be enrolled in a Bachelor of Arts program in chemistry. This program consists of 52 credits in the major and is designed for students who may desire a chemistry degree, but do not have a full eight semesters to commit to the program. Such students may be those enrolled in the School of Education, transfer students or students choosing a second major.

The B.A. in Chemistry does explore the five sub disciplines of chemistry and does have a laboratory component. However, the depth of student exploration in the chemical sciences is not sufficient enough to attain certification by the ACS.

Students in the School of Education will automatically be enrolled in the B.A. program. Other students seeking to enroll in the Bachelor of Arts program in Chemistry must consult with the Chair of the Department of Chemistry, Biochemistry & Physics before being considered for this program.

Note:

1. Math and Science core requirements are included in the major.

Courses and Descriptions

CHE 100 Intro to College Chemistry 3 Credits

Open to all students, but designed primarily for those who wish to major in a science which requires chemistry but whose chemistry background is not sufficient to allow entrance into Chemistry 120. It focuses on the nomenclature used in chemistry including the symbols used to designate the chemical elements, the construction of chemical formulas, and the writing and balancing of chemical equations. Other topics will include interpreting the Periodic Table, the valences of the elements, the mole concept, and simple stoichiometry. In addition, chemical calculations involving units, scientific notation, significant figures, and the algebraic manipulations of simple equations will be included. Three hours of lecture per week. This course does not satisfy the requirements for the biochemistry or chemistry degree, but does satisfy the core requirements for liberal arts, education and business majors.

CHE 115 Chem and Contemporary Society 3 Credits

Designed to give the nonscientist an appreciation of the role of chemistry in today's world. The approach is conceptual rather than mathematical. Topics include basic principles of chemical theory, energy sources, elementary organic chemistry, drugs, food additives, polymers, chemistry of living systems, inorganic solids in modern technology, and problems involving pollution of the environment. Three hours of lecture per week. This course satisfies the core requirements for liberal arts, education and business majors.

CHE 118 Exploration of Chemical Prin 4 Credits

A one-semester introduction to the principles of chemical sciences. Students will utilize inquiry-based learning methods to examine contextual problems as a means to explore introductory models and concepts of chemistry. Students will also gain an understanding of how scientific models are used to explain experimental observations. The laboratory component of this course is designed to provide students with an experimental context within which to develop some of the models described in the classroom. Three hours of lecture and one three-hour lab per week.

CHE 118L Explor Chemical Prin Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 118.

CHE 120 Principles of Chemistry 3 Credits

For students who have successfully completed one year of high school chemistry. This systematic study of the fundamental principles and concepts of chemistry covers atomic structure, bonding, stoichiometric relationships, including solution and oxidation-reduction reactions, and molecular structure. Three hours of lecture per week. Prerequisite(s): High school chemistry or CHE 100 is recommended before taking this course.

Corequisite(s): CHE 121.

CHE 121 Principles of Chemistry Lab 1 Credits

For students concurrently taking CHE 120. Experiments involve gravimetric, volumetric, and spectrophotometric quantitative analysis. One three-hour lab per week. Fall.

CHE 122 Intro to Chemical Systems 3 Credits

A continuation of CHE 120. For students majoring in the sciences but may be taken by others. Chemical systems in which the study of kinetics, thermodynamics, equilibrium, and radiochemistry are emphasized. Three hours of lecture per week. Prerequisite(s): CHE 120, MTH 105 or higher.

Corequisite(s): CHE 123.

CHE 123 Quantitative Methods Lab 1 Credits

Usually taken concurrently with CHE 122. Primarily for students majoring in the sciences. A number of quantitative classical and instrumental methods of analysis are used to determine thermodynamic properties and reaction mechanisms. One three-hour lab per week. Prerequisite(s): CHE 121.

Corequisite(s): CHE 122.

CHE 211 Organic Chemistry I 4 Credits

The structure, chemical properties, and methods of preparation of the more important classes of carbon compounds are studied, with an emphasis on the relationship of structure, stereochemistry, and conformation to chemical reactivity. The preparation and reactivity of organic functional groups is introduced. The use of infrared and nuclear magnetic resonance spectroscopy, and mass spectrometry for elucidating structures of organic molecules is discussed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 122, CHE 123.

Corequisite(s): CHE 211L.

CHE 211L Organic Chem I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 211.

CHE 214 Organic Chemistry II 4 Credits

A continuation of Chemistry 211, emphasizing the mechanism of organic reactions, structural interpretations of properties, preparations, reactivity and identification of organic compounds. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 211.

Corequisite(s): CHE 214L.

CHE 214L Organic Chemistry II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 214.

CHE 250 Quantitative Analysis and Statistics Methods 4 Credits

This course will provide a deeper exploration of topics in chemistry that are steeped in numerical analysis. These topics include advanced analysis of equilibrium systems, acid-base systems and electrochemical systems. Additional detail will be given to methods of chemical measurement, statistical methods of data analysis and determination of data validity and reliability. Both lecture and laboratory will show an emphasis on using computer-based tools to analyze experimental data. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 122, CHE 123, MTH 210.

Corequisite(s): CHE 250L.

CHE 250L Quantitative Analysis and Statistical Methods Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 250.

CHE 305 Physical Chemistry I 3 Credits

The mathematic and conceptual foundations of physical chemistry will be introduced with an over-arching theme of determination of energy allocation within atomic and molecular systems. Topics will include determination and measurement of energy states in atoms and molecules, simple quantum mechanical systems, distribution of energies and the connection to thermodynamic quantities, the three laws of thermodynamics, spontaneity, equilibrium and experimental kinetics.

Prerequisite(s): CHE 214, MTH 211, PHY 201.

CHE 306 Physical Chemistry II 3 Credits

Physical chemistry concepts are explored in more detail with emphasis on examination of systems that require multiple models in physical chemistry to explain. Topics will include, kinetic theory and transition state theory, statistical mechanics and its connections to thermodynamic functions, temperature dependence of spontaneity and equilibrium, the thermodynamics of condensed phases and multi-component equilibria, electrochemistry, multi-electron quantum mechanical systems, approximations in quantum mechanics, symmetry and advanced molecular spectroscopy.

Prerequisite(s): CHE 305, MTH 212.

CHE 315 Inorganic Chemistry 3 Credits

The periodic table as a tool for predicting the physical and chemical properties of chemical systems is developed and examined in conjunction with various theories of bonding, including valence bond, molecular orbital, valence shell electron repulsion, and ligand field theory. Emphasizes structure of crystalline solids, coordination compounds, reaction mechanisms, and structure-property relationships. Three hours of lecture per week.

Prerequisite(s): CHE 214.

CHE 316 Inorganic Chemistry Laboratory 1 Credits

Students will explore a variety of synthetic methodologies for the growth of inorganic molecular systems, and solid-state materials. A transition metal or main group metal plays a central structural role in all systems that will be examined. Modern analytical methods will be applied to characterize synthesis products, such as FT-IR spectroscopy, polarimetry, NMR, and powder X-ray diffraction analysis.

Prerequisite(s): CHE 315 or as corequisite.

CHE 320 Polymer Chemistry 3 Credits

Designed to acquaint students with the structure and properties of polymers, the contrast between small molecules and polymers, methods of measuring molecular weight, the mechanism of polymerization, and the methods of fabricating polymers.

Prerequisite(s): CHE 214, CHE 305 or CHE 306.

CHE 325 Physical Chemistry Laboratory 1 Credits

Measurements are made of physical properties of molecules and chemical dynamical processes. These measurements will be used to develop models which explain the physical chemical nature of the systems under examination. Experiments will utilize various instrumental techniques such as infrared spectrometry, nuclear magnetic resonance, fluorescence and UV/Vis spectrometry. One three-hour lab per week.

Prerequisite(s): CHE 250, CHE 305.

CHE 330 Instrumental Analysis Laboratory 2 Credits

This course is designed to give students practical experience using modern analytical instrumentation and to provide students with the background theory and principles of operation. The instrumental methods introduced in this course include: ultraviolet and visible spectroscopy, atomic emission spectroscopy, gas chromatography (GC), high performance liquid chromatography (HPLC), X-ray powder diffraction analysis and electrochemical analysis. This experimental laboratory course meets two times per week with three hours for each session. One session will be focused on instrumentation background theory and discussion and the other session will be experimental practice.

Prerequisite(s): CHE 214, CHE 250, PHY 201.

CHE 350 Advanced Organic Synthesis 2 Credits

The first of four experimental chemistry labs designed for chemistry majors. It presents the use of modern techniques, and instrumentation in organic chemistry, including distillation, chromatography, infrared, ultraviolet, nuclear magnetic spectroscopy, and mass spectrometry. Two three-hour labs per week.

Prerequisite(s): CHE 214.

CHE 375 Computational Chemistry Lab 2 Credits

This course will provide students with a means to explore various methods in computational chemistry. Basic computational methods will be developed from first principles and these methods will then be tested using various modeling and computational software packages. Methods will include, but are not limited to, molecular mechanics, semi-empirical molecular orbital calculations, ab initio methods, and density functional calculations. Students will be exposed to various computational software packages and the strengths and limitations of each methodology will be explored. The course will meet in a computer laboratory for two for three-hour lab periods a week.

Prerequisite(s): CHE 305.

CHE 400 Chemical Bonding 3 Credits

The effects of the chemical bond on the structure and properties of molecules are investigated. Molecular orbital theories of bonding are introduced. Emphasis is placed on group theoretical methods utilizing molecular symmetry to simplify the description of the electronic structure of molecules and to predict their geometric structures and reactivity. Three hours of lecture per week.

Prerequisite(s): CHE 305, MTH 212.

CHE 415 Special Topics in Chemistry 3 Credits

An advanced level of one or more areas of modern chemistry. Emphasis on research and the literature of an area of current importance. Three hours of lecture per week.

CHE 420 Physical Organic Chemistry 4 Credits

In-depth studies of the methods for elucidating mechanisms of organic reactions for students who have completed one year of organic chemistry and physical chemistry. Topics include conformational analysis, linear free energy relationships, frontier molecular orbital theory, transition state theory, and chemical reaction kinetics. Isotopic scrambling, kinetic isotope effects, NMR and IR spectroscopy, polarimetry, and ultraviolet-visible spectrophotometry will be employed to investigate these concepts. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): CHE 214, CHE 305.

Corequisite(s): CHE 214L.

CHE 420L Physical Organic Chemistry Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 420.

CHE 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

CHE 491 Internship in Chemistry 1-4 Credits

A supervised research experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in a private, public, non-profit, or governmental organizations under the guidance of a mentor. The mentor and student will have regular consultation with the departmental internship coordinator to assess the student's progress. Normally, 50 hours of internship per credit is required. The grade for the course will be determined by the students' overall performance in their research work, a research paper documenting their work with their internship mentor and an oral or poster presentation at the end of the semester.

Prerequisite(s): 2.5 GPA and permission of the instructor.

Chinese

Program Overview

A minor in Chinese offers students the opportunity to receive a practical grounding in the Chinese language and culture through a challenging curriculum which may include study abroad. In addition, our language, literature, film and culture courses prepare students to understand cultural diversity abroad and at home, to appreciate their own language and culture, and to gain global awareness. An individual fluent in another language acquires insight into the world in which we live. Advanced foreign language skills, combined with an international perspective and intercultural expertise, position our students for productive careers in

the global and multicultural marketplaces of the 21st century. Faculty engagement in research and teaching excellence combines with our unique "accent on the individual" through advisement and co-curricular opportunities to create a challenging yet supportive atmosphere in which students can realize their potential.

A minor in Chinese will complement many degree programs in business, education, music and the liberal arts.

Students in the Chinese minor at Rider acquire an international perspective and a special intercultural sensitivity. Advanced foreign language skills combined with intercultural expertise increase the employment prospects of our students in the global market place of the 21st century.

Honors Program in Languages, Literatures and Cultures

The department faculty will identify prospective honors students at the earliest possible moment and offer them challenges and encouragement to develop to their highest potential. A student who has a 3.25 cumulative average and a 3.5 average in the major may be invited by the department, upon recommendation of a faculty member, to become a candidate for the honors program. Students should submit to the chairperson of the department, early in their sixth semester (March 15 or October 15), an Independent Research and Study (490) project form signed by a faculty sponsor. Applicants enroll in the 490 appropriate for their language in their seventh or eighth semester, and they are expected to develop their thesis or capstone project proposal and begin working on it over the prior summer. A substantive research project should be presented no later than April 15 or November 15 before a committee made up of the thesis advisor and other appropriate faculty members. Honors in languages, literatures and cultures are granted upon the successful completion and defense of the thesis or capstone project and the recommendation of the faculty of the particular language. Students who are education majors and complete their teaching practicum in their final semester should plan to complete the thesis/capstone project in their seventh semester. Non-education students may complete it in the final semester of the senior year.

Total Credits		18

¹ If original placement test is above these courses, 300- or 400- level courses may be taken instead.

CHI 100 Chinese I 3 Credits

This course is designed to foster mastery of the basic skills of Mandarin Chinese: speaking, listening, reading, and writing. The focus of the course is on communicative competency and accuracy. Together with Chinese 101, the course provides a thorough foundation in basic Chinese grammar. Students will have opportunities to work extensively with audio and/or video tapes, computer language programs and above all, students from China.

Prerequisite(s): placement test if Chinese has been studied elsewhere.

CHI 101 Chinese II 3 Credits

A continuation of Chinese 100. This course continues to foster mastery of the basic skills of Mandarin Chinese: speaking, listening, reading and writing. The focus of the course is on communicative competency and accuracy. Together with Chinese 100, the course provides a thorough foundation in basic Chinese grammar. Students will have opportunities to work extensively with audio and/or video tapes, computer language programs and above all, students from China.

Prerequisite(s): Chinese 100 or placement test.

CHI 150 Chinese Culture and Basic Language 3 Credits

This course integrates beginning-level functional Mandarin Chinese language skills acquisition with the knowledge of Chinese business practices and culture as well as hands-on information and strategies for successful inter-cultural encounters. Students gain practical basic language skills through classroom practice and the use of audio/video and computer materials. Readings, films, documentaries and lectures in English by members of the business community enable students to integrate language acquisition with practical cultural knowledge and cross-cultural awareness. Examination of Chinese customs highlights social relationships and cultural practices. No knowledge of Chinese language is required. This course does not fulfill the SLAS foreign language requirement.

CHI 200 Chinese III 3 Credits

This course is designed to foster mastery of the intermediate skills of Mandarin Chinese: speaking, listening, reading, and writing. The focus of the course is on communicative competency and accuracy. Together with Chinese 201, the course provides intermediate-level Chinese grammar, vocabulary and cultural knowledge through the use of film clips, simple newspaper articles, Internet, and other multimedia resources. Students are required to work extensively with audio and/or videotapes, computer language programs and they have a unique opportunity to work with students from China.

Prerequisite(s): CHI 101 or placement test.

CHI 201 Chinese IV 3 Credits

This course is designed to foster mastery of the intermediate skills of Mandarin Chinese: speaking, listening, reading and writing. The focus is on communicative competency and accuracy. Together with Chinese 200, the course provides intermediate-level Chinese grammar, vocabulary, and cultural knowledge through the use of film clips, simple newspaper articles, Internet and other multimedia resources. Students are required to work extensively with audio and/or videotapes, computer language programs and they have a unique opportunity to work with students from China.

Prerequisite(s): CHI 200 or placement test.

CHI 300 Advanced Chinese Reading and Composition 3 Credits

This course develops Chinese reading and writing skills within a cultural context and aided by a systematic review and expansion of grammar and vocabulary. Using literary, journalistic, business and other sources, students learn various writing discourses and their Chinese variants including narration, description, exposition, and journalistic, business documentation and letter writing. Some translation is used to encourage linguistic analysis. Interviews with Chinese foreign nationals, Chinese Americans, and working with students from China enhance the cultural understanding of students necessary for meaningful reading and writing.

Prerequisite(s): CHI 201 or placement test.

CHI 307 Images of Women in Chinese Literature and Film 3 Credits

This course will introduce students to the (change of) status of women in China through literature and film. Students will explore the rich Chinese literary traditions and examine how the images of women are represented by both male and female writers/directors in fiction and film of different historical periods. In the process of such exploration and examination, students will also examine how the literary movements and their historical, social, cultural and political contexts shape, and are shaped by, each other. They will learn to understand how diverse the experiences of Chinese women are. While students will be exposed to both classic and modern/contemporary literary traditions, the focus will be on the latter, such as May 4th New Culture Movement, Maoist revolutionary literature, (Post-Mao) wound literature, Root-Searching literature, etc. Classes are in English.

CHI 310 Chinese Culture and Civilization 3 Credits

This course introduces students to the history, people and culture of China. They will explore China's powerful dynasties and empire and their cultural and aesthetic achievements, and will learn about nationalism, Mao's revolutionary communism. They will study China's religions, calligraphic, pictorial and ceramic traditions, literature, Chinese opera and cinema. Through an examination of Chinese customs, students will gain an appreciation of social relationships and cultural practices. No knowledge of Chinese language is required.

CHI 311 Calligraphy As a Window to Chinese Language and Culture 3 Credits

This course provides students with a chance to gain an intimate knowledge of Chinese language and culture through calligraphy. Students will learn the basic principles and techniques of writing Chinese characters with the writing brush. They will be introduced to the pronunciation, the composition and evolution of Chinese characters so that they will be able to read and understand what they write. Students will also learn how calligraphy is immersed in various aspects of Chinese culture. The main content of the course derives from examining applications of calligraphy to poetry, painting, and core concepts of Confucianism, Daoism and Buddhism. They will have a chance to cross time and space, having dialogues with Confucius, experiencing Buddhist bliss of final "awakening" or "enlightenment" and abandoning themselves to the Daoist spontaneous flow with the movement of Nature and the cosmos. No knowledge of Chinese language is required.

CHI 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

CHI 500 Democracy, Revolution/Reform and Literary Movement in Modern China 3 Credits

This course will exam representative works in modern and contemporary Chinese literature from the May 4th period to the "Red Classics Era" or Communist/ Maoist literature, to various Post-Cultural Revolution literary movements, situating them in their social, political, and historical contexts, exploring them as an imaginary space where various cultural and political values are contested, a space where modern Chinese identity is defined and redefined, and a space against which the trajectory of China's search for democracy and modernization is mapped. The literary movements that will be examined are: May 4th Literary Movement at the beginning of the 20th century; Maoist / Communist Literature from 1949 to the Great Cultural Revolution (1966-1976); Wound Literature from late 1970s to early 1980s; Root-searching literature from mid 1980s to the late 1980s; Postmodern Play Literature and Reform Literature from 1990s to the present.

Chinese and Asian Area Studies

Program Overview

Chinese and Asian area studies is a multi-disciplinary minor that aims to provide students with a complex and interrelated knowledge base from which to understand China as a historical and cultural entity. The minor incorporates the study of language, the humanities and the social sciences. Students are encouraged to incorporate study abroad in their program and can complete the minor with an independent research project.

The Chinese and Asian area studies minor, drawing on the breadth and strengths of departments in the Liberal Arts, will guide students into the field systematically through course work and education abroad opportunities as well as co-curricular activities such as lectures, symposia, colloquia, film festivals, and other events that will help students understand the matrix of Chinese culture. Students will come to understand China in its geographic, topographical and climatological richness; its linguistic, demographic, social, and other cultural formations; and its national and regional, social and political developments. Each student will have an adviser who will help the student create a set of courses that provides system and structure to the student's development.

¹ Students who place out of CHI 200 must take CHI 201 and one additional Chinese language course at the 300 or 400 level. Students who place out of CHI 200 and CHI 201 must complete one Chinese language course at the 300 or 400 level.

Study Abroad or domestic experience within a Chinese linguistic context or business environment—study, service-learning or internships—may meet some of the requirements upon consultation with the student's advisor. Students must take at least one course in the Chinese and Asian Area Studies Minor upon completion of Study Abroad or a domestic experience as described above.

Independent Research and Study courses and Baccalaureate Honors courses may be substituted in consultation with the Area Studies Program director.

Note: Students must receive a grade of "C" or better in courses required for the major or minor in the department. If a student receives a grade lower than "C" in a required course, the student must meet with his/her academic advisor to discuss the appropriate action that must be taken to remedy the situation.

Courses and Descriptions

CHI 100 Chinese I 3 Credits

This course is designed to foster mastery of the basic skills of Mandarin Chinese: speaking, listening, reading, and writing. The focus of the course is on communicative competency and accuracy. Together with Chinese 101, the course provides a thorough foundation in basic Chinese grammar. Students will have opportunities to work extensively with audio and/or video tapes, computer language programs and above all, students from China.

Prerequisite(s): placement test if Chinese has been studied elsewhere.

CHI 101 Chinese II 3 Credits

A continuation of Chinese 100. This course continues to foster mastery of the basic skills of Mandarin Chinese: speaking, listening, reading and writing. The focus of the course is on communicative competency and accuracy. Together with Chinese 100, the course provides a thorough foundation in basic Chinese grammar. Students will have opportunities to work extensively with audio and/or video tapes, computer language programs and above all, students from China.

Prerequisite(s): Chinese 100 or placement test.

CHI 150 Chinese Culture and Basic Language 3 Credits

This course integrates beginning-level functional Mandarin Chinese language skills acquisition with the knowledge of Chinese business practices and culture as well as hands-on information and strategies for successful inter-cultural encounters. Students gain practical basic language skills through classroom practice and the use of audio/video and computer materials. Readings, films, documentaries and lectures in English by members of the business community enable students to integrate language acquisition with practical cultural knowledge and cross-cultural awareness. Examination of Chinese customs highlights social relationships and cultural practices. No knowledge of Chinese language is required. This course does not fulfill the SLAS foreign language requirement.

CHI 200 Chinese III 3 Credits

This course is designed to foster mastery of the intermediate skills of Mandarin Chinese: speaking, listening, reading, and writing. The focus of the course is on communicative competency and accuracy. Together with Chinese 201, the course provides intermediate-level Chinese grammar, vocabulary and cultural knowledge through the use of film clips, simple newspaper articles, Internet, and other multimedia resources. Students are required to work extensively with audio and/or videotapes, computer language programs and they have a unique opportunity to work with students from China.

Prerequisite(s): CHI 101 or placement test.

CHI 201 Chinese IV 3 Credits

This course is designed to foster mastery of the intermediate skills of Mandarin Chinese: speaking, listening, reading and writing. The focus is on communicative competency and accuracy. Together with Chinese 200, the course provides intermediate-level Chinese grammar, vocabulary, and cultural knowledge through the use of film clips, simple newspaper articles, Internet and other multimedia resources. Students are required to work extensively with audio and/or videotapes, computer language programs and they have a unique opportunity to work with students from China.

Prerequisite(s): CHI 200 or placement test.

CHI 300 Advanced Chinese Reading and Composition 3 Credits

This course develops Chinese reading and writing skills within a cultural context and aided by a systematic review and expansion of grammar and vocabulary. Using literary, journalistic, business and other sources, students learn various writing discourses and their Chinese variants including narration, description, exposition, and journalistic, business documentation and letter writing. Some translation is used to encourage linguistic analysis. Interviews with Chinese foreign nationals, Chinese Americans, and working with students from China enhance the cultural understanding of students necessary for meaningful reading and writing.

Prerequisite(s): CHI 201 or placement test.

CHI 307 Images of Women in Chinese Literature and Film 3 Credits

This course will introduce students to the (change of) status of women in China through literature and film. Students will explore the rich Chinese literary traditions and examine how the images of women are represented by both male and female writers/directors in fiction and film of different historical periods. In the process of such exploration and examination, students will also examine how the literary movements and their historical, social, cultural and political contexts shape, and are shaped by, each other. They will learn to understand how diverse the experiences of Chinese women are. CHI 500 Democracy, Revolution/Reform and Literary Movement in Modern China 3 Credits

This course will exam representative works in modern and contemporary Chinese literature from the May 4th period to the "Red Classics Era" or Communist/ Maoist literature, to various Post-Cultural Revolution literary movements, situating them in their social, political, and historical contexts, exploring them as an imaginary space where various cultural and political values are contested, a space where modern Chinese identity is defined and redefined, and a space against which the trajectory of China's search for democracy and modernization is mapped. The literary movements that will be examined are: May 4th Literary Movement at the beginning of the 20th century; Maoist / Communist Literature from 1949 to the Great Cultural Revolution (1966-1976); Wound Literature from late 1970s to early 1980s; Root-searching literature from mid 1980s to the late 1980s; Postmodern Play Literature and Reform Literature from 1990s to the present.

Communication Studies

Program Overview

In Rider's Communication Studies program, students hone their writing, research, verbal and nonverbal communication skills, all of which are vital for people entering the communications field. By stressing the importance of both verbal and nonverbal skills, the program provides students with what they need to become successful as they begin their careers. In addition, most students participate in internships in order to supplement classroom learning and move into their career of choice upon graduation.

Curriculum Overview

In addition to the department and major core courses, students choose between either an emphasis in Communication and Culture or in Organizational Communication. In the capstone course, students bring together their research and presentation skills as they conduct comprehensive research in topics of their choosing, learning from faculty who themselves are researchers in the field.

Students also have the opportunity, even in their first year, to write and present academic research papers and showcase their work at undergraduate conferences both locally and regionally. Students graduate with the skills to critically analyze a problem, research possible answers, evaluate information and report findings in an accessible manner. In a fast-changing world, these are invaluable skills.

COM 104 Speech Communication 3 Credits

Examines basic communication principles and strategies of public speaking. Various genres of oral communication are studied, with an emphasis on extemporaneous and impromptu forms of delivery. Students research, prepare, and deliver speeches that are then used as the focal point for the discussion of effective speaking and listening. A number of speeches are videotaped. Students who received credit for COM 104S may not take this course.

COM 104S Intro to Speech Communication 3 Credits

As part of the EOP program, this course is designed to improve the speaking and language skills of new college students. Through directed practice, students have the opportunity to develop poise and confidence in oral communication, as well as competence in analyzing and synthesizing messages. Emphasis is placed on development, organization, and delivery of speeches. To receive credit, a grade of "C" or higher must be earned. Students who receive credit for COM 104S may not take COM 104.

COM 105 Communication, Culture and Media 3 Credits

Provides a detailed investigation and analysis into the nature, history, scope, adequacy, and limitations of mass communication and examines the reciprocal influence of the media on culture and society.

COM 106 Writing for the Comm Professions 3 Credits

Provides students with written communication writing strategies and tools. Applies theory and practice in communication to targeted audiences. Emphasizes the critical role writing plays in the communication workplace and provides an opportunity to evaluate and respond to real-life writing samples and situations.

COM 107 Writing for the Media 3 Credits

Introduces students to interviewing and persuasive writing techniques for print and electronic public relations and advertising formats. Teaches techniques for creating effective digital audio-visual aids and working with digital audio and video.

COM 131 Fundamentals of Video Production 3 Credits

Introduces students to basic video production theories, techniques, and applications. Students will gain competency in a number of video production areas including: production planning, camera operations, lighting, sound, and digital non-linear editing. Individual and group production exercises will involve planning and executing video productions in both studio and non-studio settings. This class is designed to prepare students from any major to effectively create, produce, shoot, and edit basic video production assignments including public service announcements, video news releases, educational/instructional videos, and marketing/promotional spots.

COM 201 Communication Theory 3 Credits

Explores selected theories, models, and research methods in human communication, the dynamics of the communication process in various settings, and the role of communication in human interaction.

COM 204 Advanced Speech Communication 3 Credits

Provides students with the opportunity to further their study and practice of various types of speech communication. Moving beyond an introductory perspective, this course focuses on the development of critical, analytical, and pragmatic aspects of speech. The focus is divided between the discussion of theoretical models and a demonstrated competence of that material.

Prerequisite(s): COM 104 or COM 290.

COM 205 Theories of Persuasion 3 Credits

Analyzes the motivations that lead individuals and audiences to beliefs and actions and the techniques of achieving objectives through persuasion. Attention, interest, empathy, ethos, fear, and techniques of speakers, and those who use persuasion professionally are studied.

COM 207 Social Media and Social Change 3 Credits

Introduces students to Web/ social media tools and information distribution networks that have enabled people to mobilize new types of collective action, inform publics and advocate positions. Community production and sharing of knowledge (Wikipedia), culture (YouTube, Flickr, the blogosphere), and political organizing (colorofchange.org) are current manifestations of social changes that are continuing to bloom in the 21st century. In this course, Rider University students will become literate in active Web and social media participation with a focus on engaging with current social, political and cultural issues.

Prerequisite(s): COM 201 or COM 205.

COM 210 News Reporting and Writing 3 Credits

Develops skills in hard-news reporting. Employs off-campus reporting assignments to refine information-gathering techniques such as interviewing, observation, and use of government documents and other contextual materials. Includes reporting and writing about police news, state and local government, the criminal justice system, science, business, and sports.

Prerequisite(s): COM 102.

COM 211 Copy Editing 3 Credits

Teaches all phases of copy editing for news and public relations: marking of copy, online editing, fact checking, building and shaping news and feature stories, applying mechanical style, building an ear for graceful English, and safeguarding against legal and ethical problems. Provides comprehensive review of grammar, spelling and punctuation, along with intensive practice in writing headlines and captions and editing wire copy.

Prerequisite(s): COM 102.

COM 212 Publication Design 3 Credits

Explains theories, principles, and techniques of print media layout and design. Provides an understanding of the use of type and art as design elements in various publication formats, such as newspapers, newsletters, advertisements and brochures. Directs students to apply these concepts to the creation of published materials using Adobe Creative Suite.

COM 215 Computer Assisted Reporting 3 Credits

Develops advanced reporting techniques for researching and writing in-depth news stories and investigative articles. Uses state-of-the-art computer-assisted reporting methods including finding and mining data bases on the Internet, creating spreadsheets to analyze data, and employing data base manager software to sort and summarize information in government documents and other specialized resources. Focuses on conceptualizing of story ideas, planning major projects, gathering information by means of data bases, participant-observation, interviews, and analysis of public documents. Emphasizes organizing large quantities of material and presenting it in a meaningful context, including with information graphics.

Prerequisite(s): COM 102 or permission of instructor.

COM 220 Voice and Articulation 3 Credits

Increases the student's knowledge of the vocal elements of oral communication and improves use of voice and articulation. Introduces anatomy and physiology for enhanced vocal production. Analyzes volume, rate, pitch, quality, phrasing, stress, and inflection. Presents the International Phonetic Alphabet as a means of developing correct articulation and pronunciation. Uses classroom exercises and tape recording for feedback and learning.

COM 230 Radio & TV Communication 3 Credits

Examines the field of electronic communication and its role in society. Scrutinizes the history, technology, structure, and regulation of broadcasting including issues, trends, and the impact of new communication technologies. Introduces basic principles of effective communication in broadcast writing and producing.

COM 233 Writing for Broadcast 3 Credits

Introduces diverse and highly structured writing styles and formats used in writing for broadcast. With focus on effective and creative writing using broadcast style, students will be exposed to the fundamentals of writing dramatic and non-dramatic material for radio and television including station IDs and liners, public service announcements and commercials, news and public affairs programs, and short dramatic and documentary scripts. Through lectures, case discussions, in-class assignments, and critiques, emphasis will be on the practical application of basic rules and conventions common to broadcast writing from copy preparation to on-air delivery.

COM 234 Audio Production 3 Credits

Provides a laboratory study of audio production techniques, and performance. Introduces the fundamental properties of sound as applied in modern audio production at radio and television stations, sound studios, and production houses. Students conduct lab exercises in editing, mixing, and digital recording using ProTools. Students perform a variety of genres including news, commercials, dramas, and promos.

COM 235 Digital Filmmaking 3 Credits

This course will provide students with an introduction to basic narrative film production including theories, techniques and applications. Students will gain competency in a number of film production areas including: idea generation and scripting, production planning, cinematography, lighting, sound and digital editing. Working as individuals and in groups, students will develop and produce short narrative film projects. Students will continue to develop proficiency and mastery of the use of specialized vocabulary of the film industry as well as the ability to analyze film and its narrative structure. In addition students will break down the "narrative" focusing on genre conventions and subtext. Students will additionally examine the relevance of film to society while developing proficiency and mastery in the study of how to create film projects.

COM 236 The Aesthetics of Filmmaking 3 Credits

Introduces students to basic terminology, techniques, theories and criticism commonly used in digital filmmaking. Through lecture, class discussion and screenings, students will learn how film theory, criticism and aesthetics impact the filmmaking process. Students will review and analyze films of different genres; the different approaches adopted by filmmakers; and the various elements and techniques that contribute to the creation of powerful and effective films. Aesthetic elements such as production design, mise en scene, cinematography, lighting, editing, sound design and script development will be introduced and practiced.

COM 240 Public Relations 3 Credits

Introduces current theories and practices of public relations, with emphasis on facilitating two-way communication with various publics. Explores approaches to public relations problems by critically analyzing case studies and applying theories and techniques to realistic situations.

COM 251 Interpersonal Communication 3 Credits

Focuses on the study of various communication concepts and theories and the development of interpersonal skills and sensitivities. More specifically, students will participate in lectures, exercises, and projects while exploring the role and function of relationships in their professional, social, and personal lives.

COM 252 Intercultural Communication 1.5-3 Credits

Develops intercultural communication competence through an awareness and understanding of diverse cultures and their impact on communication. It will introduce students to those general factors that influence communication with people from diverse cultures both internationally and within the United States, and offer a blend of skill development, communication theory, and hands-on application. Note: This course is crosslisted as GLS 252. Students may not get credit for both COM 252 and GLS 252.

COM 253 Organizational Communication 3 Credits

Focuses on the ongoing communication processes in organizations. This course examines how and why organizations develop policies and procedures that both encourage and yet constrain creativity and autonomy in employees. It also introduces various management skills to balance the dynamic in organizations. Finally, the course introduces students to various communication technologies that enable communication processes in organizations. Students will also have opportunities to participate in creating organizational dynamics through role-playing exercises, case studies, and other kinds of experiential learning.

COM 254 Intro to Health Communication 3 Credits

Health communication has been shown to have a positive impact on a number of facets of the medical visit, including patient outcomes, patient satisfaction, and job performance and satisfaction. This course will provide students with tools to implement health communication practices in a healthcare setting in order to improve these areas. In addition, health communication is particularly useful in cross-cultural situations, both in regard to the patient-provider relationship, when the ethnicities of the two parties may be different, and when cultural beliefs may impact a patient's medical wishes. Part of the tools for implementing health communication into the practice setting includes an understanding of the role that culture can play in healthcare and the development of strategies to provide optimal medical care while also respecting cultural intricacies.

COM 261 Web Design I 3 Credits

Introduces students to digital graphics, text, audio and video for Web design using Adobe Creative Suite. Students will learn the basics of audio, video, graphic, and interactive software along with theories of design and perception that underlie effective presentation of digital messages.

COM 262 Graphic Imaging for Digital Media 3 Credits

Teaches students techniques for image development, and image preparation for various multimedia applications. Emphasis is placed on color calibration and palette issues, image manipulation, advanced image selection techniques, transparency and masking, multimedia authoring file formats, and dynamic image design. Students will be expected to participate in critiques of professional designs in order to learn to critically evaluate their work and their fellow students' work.

Prerequisite(s): COM 261 or permission of instructor.

COM 263 History and Principles of Graphic Design 3 Credits

Covers the history and principles of graphic design from analog art through the digital revolution. The elements and principles of design will be used to study stylistic progressions, artistic techniques, design innovations, and mechanical inventions. Material will be presented through a combination of illustrated lectures and discussions.

COM 264 Intro to Media Convergence 3 Credits

Introduces the ways that the merging of media industries and the intersection and integration of various media platforms and technologies impact our lives. While the primary focus will be on digital and mobile technologies and practices, the course will also cover the convergence of digital technologies in a wide range of media areas, including journalism, social media, television and entertainment. The course will offer students broad conceptual frameworks for thinking about how the emergence and evolution of digital as well as mobile communication technologies have changed the communication and journalism industries and how they are reshaping content. In addition, the course is intended to allow students to use different digital communication technologies.

COM 265 3D Graphic Animation 3 Credits

Provides students with an introduction to the basics of 3D graphic animation techniques including modeling, texturing, rendering, visual effects and animation. Through various projects the students will learn: to model characters, sets and props, how to apply textures and color to their models, and how to bring their creations to life using various animation techniques. In addition to the technical aspects of creating successful animation, the students will also learn the aesthetics of animation in regard to cinematography, art direction, lighting, character creation, prop creation, and set creation, dramatization and narrative.

COM 270 Sports Multimedia Reporting 3 Credits

COM 270 Sports Multimedia Reporting. Develops skills in hard-news sports reporting, game coverage, and the production of introductory multimedia and social media sports content. Employs out-of-the-classroom reporting assignments to refine information gathering techniques such as interviewing, observation, and use of documents and other contextual materials. Includes reporting and writing on sports games, teams, players, coaches, athletic issues/controversies, and the business of sports.

Prerequisite(s): COM 102. Introduction to News Writing.

COM 280 Issues in Event Planning 3 Credits

Offers students education in event planning, production, and supervision for varied professional applications. Emphasis will be placed on planning, budgeting, and organizing small and large events for educational, institutional, non-profit, and professional groups. Students will participate in the entire process of event planning, with specific experiences in applying communication theory to actual projects.

Prerequisite(s): COM 240 or MKT 200.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

COM 291 Documentary Film and Video 3 Credits

Surveys the history of documentary film, including reportorial, exploratory, persuasive, symphonic, compilational, reflexive, and fictional traditions through screenings, lectures, and readings. Provides practice in film criticism. Explores philosophical questions about the relationship between non-fiction films and videos and the reality they purport to record. Analyzes ethical problems of filmmaking.

COM 301 Communication Law 3 Credits

Critically examines the legal limits and privileges affecting freedom of expression, especially in publishing, advertising, film, telecasting, and cyberspace. Places particular emphasis on the historical and philosophical foundations of the freedoms and limitations of communication in the United States.

COM 302 Communication Ethics 3 Credits

Analyzes internal and external pressures on the communication professional including economic, cultural, social, and political pressures, assesses the philosophical and practical basis for responding to such pressures, evaluates contemporary media responses to these pressures, identifies those that are of laudable quality and why, and provides guidance as to how individuals and organizations can think and react ethically. Issues addressed include censorship, confidentiality, conflicts of interests, minority and ethnic groups, privacy, sensationalism, and self-criticism.

COM 312 Spe Topics in Jour Writing 3 Credits

Provides students with the opportunity to explore specialized topics in journalistic reporting and writing. Each course will focus on a specific area in the broad field of journalism. Examples include business reporting, health reporting, and sports reporting.

Prerequisite(s): COM 102 or COM 107.

COM 316 Feature Writing 3 Credits

Focuses on problems and requirements of newspaper, magazine, public relations, and free-lance nonfiction writing. Students write features designed for acceptance in print, broadcast and digital media and learn marketing techniques.

Prerequisite(s): COM 102 or COM 107, English writing concentration, or permission of instructor.

COM 318 Gender and Communication 3 Credits

Focuses on interactive relationships between gender and communication in contemporary American society. It connects theory and research with practice to explore multiple ways communication in families, schools, media, and society in general creates and perpetuates gender roles. It is designed to heighten students' awareness of how we enact socially created gender differences in public and private settings and how this affects success, satisfaction, and self-esteem. Note: This course is crosslisted as GND 318. Students may not get credit for both COM 318 and GND 318.

COM 322 Argumentation and Debate 3 Credits

Investigates the theory and practice of speech communication that seeks to persuade by inferential argumentation. Concentrates on theories, practices, and research in argumentation and debate, blended with speaking experience in analyzing and advocating controversial topics.

Prerequisite(s): COM 104 or COM 290.

COM 323 Oral Interpretation of Lit 3 Credits

Provides an orientation to the field of oral performance. Students select literary texts, adapt the material to the audience and prepare it for presentation. Emphasizes the development of voice, articulation, and kinesic behavior. Presentations to the class are critiqued.

Prerequisite(s): COM 104 or COM 290 or permission of instructor.

COM 328 Sitcoms and American Culture 3 Credits

Provides an overview to the unique and highly structured form of the American television situation comedy. The primary focus will be on history and development with in-depth study of situation comedy themes, characters, and settings. Through lectures, case discussions, in-class assignments, and class projects, students will examine the social and cultural meanings and implications of this incredibly popular and durable genre of programming.

COM 330 Documenting Cultures Thru Travel 3 Credits

Offers students, through travel and study, a unique opportunity to gain firsthand experience of a foreign culture and to learn how to record and document their experiences using multiple media, including print, audio, video, photography and/or the Web. While traveling, students will be required to attend lecture/discussion sessions, site tours, and other planned activities. This experience will be preceded and/or followed by additional academic work to be conducted on campus. Study topics may include aspects of the historical, social, economic, political and aesthetic cultural components appropriate to the location(s) to be visited. The travel component of the course will be scheduled to avoid conflict with normal semester offerings. No foreign language skills are required.

COM 331 Television Production 3 Credits

Explores the technological capabilities and limitations of the television medium in team productions using a range of styles and formats. Students learn principles of studio production, electronic field production, and electronic news gathering. Exercises include use of computer graphics, audio production, and non-linear video editing. Stresses electronic communication skills and aesthetic values in a professional production setting.

Prerequisite(s): COM 230.

COM 333 Broadcast Programming 3 Credits

Analyzes the theory, practice, structure, and function of broadcast programming. Examines the structure of the industry as it relates to entertainment, information, and the audience. Studies program categories, formats, genres, trends, consistency, accountability, and ratings as well as cable, satellites, and home video. Critical standards are developed by introducing humanistic and scientific modes of program analysis.

Prerequisite(s): COM 230.

COM 335 Television Field Production 3 Credits

Provides an in-depth study of advanced techniques in Field Production for television. Individual and group field production assignments will involve planning and executing single camera production in a non-studio setting. Previously developed video production skills will be refined, and students will gain increased competency and sophistication in all areas of field production including: production planning, camera operations, lighting, sound, and digital non-linear editing. Designed to prepare students to effectively function in the industry as a member of a professional field production team. In field situations, students create, produce, shoot, and edit documentaries.

Prerequisite(s): COM 331.

COM 337 Music Production for Mass Media 3 Credits

Offers students education in audio production techniques for music and other advanced audio material. Building on theory and practice introduced in the prerequisite, the class will instruct students in the theory behind acoustics and electronics as well as the digital tools and media. Those theoretical studies will be put to practice through exercises in recording music, making selections from music libraries, multi-track recording, arranging, editing, mixing and mastering. Students will begin to develop both an engineer's attention to audio detail and a musician's sense of artistry. Putting these skills to use, the students will produce complete musical works of varying musical styles, working both individually and in teams.

Prerequisite(s): COM 234.

COM 338 Writing for Broadcast II 3 Credits

Building on COM 233 Writing for Broadcast, this course provides a hands-on approach to more sophisticated reporting and interviewing techniques and writing formats used in long-form radio and television programs. This course will expose students to the following broadcast script writing areas: features, documentaries and reality programs. It will also cover writing for interview/talk show programs, music, comedy and variety programs. Students will also be exposed to writing for corporate, educational and children's programming. Students will have hands-on experiences writing, producing and editing news pieces and webcasts for student and area media outlets and web sites.

COM 341 Publicity Methods 3 Credits

Applies communication theory to writing and editorial processes and production techniques to create public relations materials; includes press releases, industrial publications, social media, trade publications, brochures, newsletters, stockholder reports, and multimedia platforms.

Prerequisite(s): COM 107, COM 240, or permission of instructor.

COM 347 Sports Media Relations 3 Credits

Critically examines the symbiotic relationship between the mass media and professional sports franchises and major college athletic programs. This course deals with the workings and processes behind executing the proper techniques of sports information and media relations, as well as an analysis of the culture of sports in modern society. Students will develop a practical focus on sports information and promotion, including the role of the sports information director and events promoter, with emphasis on advanced concepts of public relations, publicity and marketing.

Prerequisite(s): COM 240 or permission of instructor.

COM 348 Communication Research Methods 3 Credits

Introduces students to the research methods used to study communication problems and processes. Students will learn how researchers plan and design research studies, explore the methodological considerations of both qualitative and quantitative methods, and have an opportunity to gain hands-on experience in conducting research on communication-related issues.

Prerequisite(s): COM 105.

COM 350 Team & Group Communication 3 Credits

Examines the communication process as it relates to the small group. Theoretical constructs including motivation, group climate, attraction, leadership, decision making, problem solving and roles are analyzed. Utilizes group experience to study and evaluate the dynamics and effectiveness of interpersonal systems.

COM 352 Chinese and American Intercultural Commu 3 Credits

Instructs students about Chinese culture and communication. Culture impacts communication practices and styles in significant and subtle ways. Through readings, lectures, discussions, and first-hand interactions with Chinese international students, the students of this course will gain both conceptual and practical understanding of major communication differences between the two cultures, and become a more skilled intercultural communicator. Note: This course is crosslisted as GLS 352. Students may not get credit for both COM 352 and GLS 352.

COM 353 Nonverbal Communication 3 Credits

Investigates studies in and theories of nonverbal communication. Lectures and experiential activities explore the effect of status, culture, and gender upon kinesics, physical characteristics, proxemics, tactile communication, paralanguages, artifacts, and environmental factors.

Prerequisite(s): COM 104 or COM 290 or permission of instructor.

COM 360 Adv Publicatn Design & Present 3 Credits

Builds on elementary knowledge of graphic design to teach the principles of advanced layout, and computer graphics. Introduces students to industry standard drawing software and builds on their knowledge of layout software gained in the prerequisite course. Provides an understanding of the use of logos, infographics and magazine layout, and of the theoretical bases of color for print production.

Prerequisite(s): COM 212.

COM 361 Photography 3 Credits

Using digital SLR cameras, introduces students to professional methods of shooting varied subjects while applying a range of compositions and styles. Using Photoshop, students edit images for publication in print and on the Internet. Hands-on coursework is grounded in theory, history, aesthetics, and ethics. Some cameras are available for loan from the University.

Prerequisite(s): permission of instructor.

COM 363 Converging Digital Media 3 Credits

Examines the digital technologies that make up the new world of digital convergence. The course will examine the effects of digital media convergence on social life, ethics, industry, and local and global communities through a variety of theories and paradigms. This course will also help students develop necessary digital media production skills and use them critically to solve media development problems.

COM 364 Web Design II 3 Credits

Equips students with the theories and practical techniques required to produce effective digital text, graphics, and animations for the Web. Discusses theories behind the use of these media in terms of effective communication and interaction. Introduces students to different computer platforms and requirements for cross-platform media.

Prerequisite(s): COM 261 or permission of instructor.

COM 365 Graphic Animation 3 Credits

Offers students education in graphic animation theories, animation development techniques, and animation preparation for various multimedia applications. Emphasis is placed on the design principles in animated communication and animation techniques. The course covers the integration of static images in animation, graphic animation techniques, animation compression, animation rendering, input/output file formats, and animation delivery. The primary software for this course is Adobe Photoshop and Macmedia Flash. Students will be expected to participate in critiques of professional animation designs in order to learn to evaluate critically their own work and their fellow students' work.

Prerequisite(s): COM 262 or permission of instructor.

COM 366 Project Management in Graphic Design 3 Credits

Explores the creative process of graphic design while developing an understanding of the methods employed in problem solving in the industry standard design software packages. Students learn how to create a hierarchy of information through the ordering of elements into a comprehensive visual unity. They consider the relationship between content and page size, proportion, grid and margins. Students learn about typography as a design element and how it works with other visual elements in design. In order to develop an understanding of the project-planning process for either printer or Web projects, students will develop and present a series of projects that will build on one another to develop their "visual voice." Students will be evaluated on their ability to apply course material to the projects to create professional-quality work; their ability to apply exchange ideas and accept and apply constructive criticism; and on their participation in class discussions, critiques and presentations.

Prerequisite(s): COM 262, COM 360.

COM 367 3D Graphic Animation II 3 Credits

Continue to learn the techniques of 3D computer animation including modeling, texturing, rendering, visual effects and animation. In addition to the technical aspects of creating successful 3D animation the students will also learn the aesthetics of animation in regard to cinematography, art direction, lighting, character creation, prop creation, and set creation.

Prerequisite(s): COM 265.

COM 370 Sports Television and Field Production 3 Credits

Provides an in-depth study of advanced techniques in sports field production for television. Individual and group field production assignments will involve planning and executing single camera production in a sports setting. Previously developed video production skills will be refined, and students will gain increased competency and sophistication in all areas of sports field production including: production planning, camera operations, lighting, sound, and digital non-linear editing. Designed to prepare students to effectively function in the industry as a member of a professional field production team. In field situations, students create, produce, shoot, and edit sports content.

Prerequisite(s): COM 131.

COM 371 Sports Feature Writing 3 Credits

Focuses on developing reporting and writing skills for newspaper, magazine, public relations, and free-lance nonfiction sports writing. Students will study published examples of outstanding sports feature writing, and write their own sports feature articles with social media and multimedia components. Instead of traditional game coverage, this course focuses on covering sports personalities, issues and themes.

Prerequisite(s): COM 102, COM 270.

COM 380 Television Production Practicum 3 Credits

Provides a workshop dedicated to the planning and creation of professional caliber television content for the campus television network and beyond. This course will provide an opportunity for students to develop writing, graphic, audio, video design and production skills in an experiential setting. Students will create materials to be used by the Rider University Network and for broadcast, cable and Internet distribution. Students can be involved in any and all phases of creating content from project conception through implementation. Students will gain valuable experience with, a greater appreciation for, and increased competency in creating professional media content. This class will also prepare students to more effectively function in the communication industry as an effective member of a professional production team. Since topics will vary by semester and instructor, this course may be repeated once.

Prerequisite(s): permission of instructor.

COM 390 Communication and Society 3 Credits

Examines in a topical manner the influence of communication upon significant issues and movements affecting people and society. Investigates interpersonal and mass media factors as they relate to a major issue such as changing sex roles, radicalism, racism, evangelism, election campaigns, and technology. May be taken more than once with different emphasis.

COM 391 Communication Criticism 3 Credits

Investigates and analyzes various methods of communication criticism and their applications to the understanding and evaluation of public and media discourses. Introduces theories and perspectives to assist in the analysis of those discourses. Methods include Aristotelean, Burkean, and ideological criticism.

COM 392 Media History: Personalities and Trend 3 Credits

Presents in a topical manner the history of the media from various perspectives, seeking to place the material into a meaningful economic, cultural, political, and/or social context. Different issues and related individuals are examined, such as the golden age of radio, motion picture economics, and media empire builders, with a view toward understanding their significant impact on the development and functioning of the media today. This course may be taken more than once with a different emphasis.

COM 393 International Communication 3 Credits

Examines mass media systems and their influence on international communication. Emphasizes media systems of major political powers such as Russia, China, the European community, the United States, and geo-political centers such as Africa, Asia, the Middle East, and Latin America. Using a seminar format, the course explores how a nation's mass media reflect its socio-political environment and national values. Focuses on the international images constructed by the mass media. Note: This course is crosslisted as GLS 393. Students may not get credit for both COM 393 and GLS 393.

COM 399 The Co-Operative Experience 3-12 Credits

This course provides a significant work experience to support the professional development of the student and complement theoretical and classroom learning. Students will be assessed based on measures as defined in a placement contract mutually agreed upon by the sponsoring faculty member, the organization representative of the placement site, and the student. Approximately 360 hours of work will be required as students work typically four days per week over at least eight weeks. The proposed placement contract requires departmental approval and the approval of the appropriate office of the dean. It is expected that the Co-op program consume the student's academic load for the semester. Final placement will be determined by the organization where the student will work. Rider University does not guarantee that every student applying for a co-op will earn a co-op placement. Contact the appropriate department for additional information. **Prerequisite(s):** junior standing and 2.75 GPA at the time of registration; Pass/fail.

Corequisite(s): IND 398 The Co-operative Experience Seminar, IND 398 and (dept) 399 combined cannot exceed 15 credits.

COM 400 Senior Seminar Communication 3 Credits

Provides students with the opportunity to explore critical issues in communication and journalism in a dynamic and engaging context. Students conceptualize problems, develop hypotheses, review literature, design appropriate techniques of inquiry, conduct their research, and present their findings orally to the seminar and in writing to the instructor. Senior journalism and communication majors only.

COM 402 Directing for Film 3 Credits

This course approaches directing both creatively and critically, and examines the role and importance of the director to the filmmaking process. The transformation of the written script into a film is explored through readings, viewing and analyzing the films of accomplished directors. Lectures and exercises illustrated with film clips and readings emphasize plot development, script analysis, developing storyboards and shot lists, rehearsal, blocking, collaborating with talent and production crew, and using the camera to effectively capture action and performance. Students will gain an effective understanding of the role of the director through the various stages of film production, and be provided the opportunity to demonstrate and cultivate his/her effectiveness as a director through individual and group assignments.

Prerequisite(s): COM 235 and COM 338.

COM 415 In-Depth Reporting 3 Credits

Utilizes advanced tools and techniques of contemporary in-depth reporting for print and multimedia. Covering multifaceted stories, students will learn how to do balanced multi-sourced field reporting and writing using primary and secondary sources including human sources, electronic documents and databases, both online and offline. Emphasis will be placed on writing stories that answer not only who, what, when and where questions but also the why, the how and the "so what?" questions. Students will also be exposed to some of the best investigative work of journalists past and present as models for analysis and discussion.

Prerequisite(s): COM 210.

COM 431 Adv TV Research & Production 3 Credits

Explores the theoretical and practical application of aesthetic technique in modern television/video production situations. While the prerequisite courses emphasized competency in equipment operations and basic production skills, this course moves to a higher platform by emphasizing concepts of production and how to apply them for effective communication. Thus this course places emphasis on advanced techniques: design and aesthetics as applied to enhance the overall video presentation as practiced in both the commercial and organizational communication arenas. In the current state of the art of video production, a mastery of aesthetic skills is necessary for the effective expression of ideas in optimal fashion and for a variety of audiences. Students will be exposed to as many techniques as practical through class discussion (including heavy participation by the student), individual and group lab activities and contact when possible with current practitioners and equipment. As most television production is done for a client, that process will form the basis for much of the course discussion and activities including projects.

COM 434 Advanced Radio Production 3 Credits

Provides in-depth study of advanced techniques in audio recording and radio programming and production. Individual and group production of short and long-form radio projects including: promotional spots, features, music programming, and news. Students will be involved in all phases of programming and production for radio including: project conception, development, management, and implementation. Selected student projects will air on the student radio station, 107.7 The Bronc.

Prerequisite(s): COM 234.

COM 435 Advanced Digital Filmmaking 3 Credits

This is an intensive hands-on course in advanced digital filmmaking. Students will gain experience with and proficiencies in a number of filmmaking areas including: creativity, production planning, aesthetics, scripting, script breakdown, camera movement, selecting and directing talent, creating scenes and sequences, visualizing action, establishing mood and conflict, as well as advanced lighting, sound and digital editing techniques. The students' use of high definition digital imaging systems as a medium for narrative cinematography will be developed and refined. In addition, students will explore how filmmaking techniques and technology can impact the visual story telling process. While often working cooperatively in groups, modeling the interdependent structure of film crews today, the creative and leadership role of the director in the contemporary film industry will be emphasized. Throughout the class, there will be an important integration of theory and practice which will enable students to produce meaningful film projects that will not only be technically effective, but strong in content and context as well.

COM 440 Cases & Campaigns in PR 3 Credits

Critically analyzes public relations case problems in industry, labor, education, government, social welfare, and trade associations. Emphasizes problem solving through the use of communication theories, public relations techniques, creative thinking, and the development of professional goals and standards. Employs realistic simulation exercises and actual case studies to develop and critique students' ability to demonstrate this knowledge in professional situations.

Prerequisite(s): COM 341 or permission of instructor.

COM 452 Seminar in Communication Studies 3 Credits

Offers an in-depth investigation of relational communication. Students explore the many complexities involved in human interaction and interpersonal dynamics. Social and psychological implications of various communicative relationships ranging from cross-gender communication to dysfunctional family systems to intercultural interactions are included.

Prerequisite(s): COM 348, COM 350, or permission of instructor.

COM 460 Web Design III 3 Credits

Builds on previous courses to refine students' understanding of theories and procedures of digital media development. Further develops Web site creation and project management theories. Students develop advanced Web creation techniques, including responsible site production.

Prerequisite(s): COM 364.

COM 462 Advanced Graphic Design and Portfolio 3 Credits

Explores the processes of graphic design by creating independent and creative solutions to a series of design problems. Students expand their proficiency in all aspects of the design process, including creative brainstorming, conceptualizing, critical thinking and presentation.

Students take a design project to both print and digital formats using Photoshop, Illustrator, and InDesign. Students develop and present a balanced portfolio as the culmination of their experience in the course.

Prerequisite(s): ART 103, ART 105, COM 262, and COM 360.

COM 470 Live Sports Reporting Capstone 3 Credits

Focuses on student production of live, professional-level sports media content. Students will combine reporting, writing, social media and multimedia from live sporting events. Live-coverage will include Rider University teams and regional or professional sporting events. The course is open to senior Sports Media Majors, or with the permission of the instructor.

Prerequisite(s): COM 370, COM 371.

COM 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

COM 491 Internship in Communication 1-4 Credits

Places qualified students in a professional area related directly to their communication training. Students may intern in a communication position with a corporation, small business, media outlet, public relations agency, non-profit organization, political party, sports organization, or other similar organizations. A minimum of 50 hours of internship per credit is required. Written reports, a final project, and supervisor evaluations are used to analyze and evaluate the experience. For students majoring in the Department of Communication and Journalism only, primarily juniors and seniors. No more than two internships are permitted for each student; exceptions may be made. The deadline for registration is the first Friday of the semester.

Prerequisite(s): 3.2 GPA and permission of instructor.

Earth and Environmental Sciences

Program Overview

The earth and environmental sciences minor, offered by the Department of Geological, Environmental, and Marine Sciences (GEMS), introduces students to basic geological and environmental principles, as well as advanced topics that unite the two disciplines. This minor not only helps students analyze and learn more about the multitude of the earth's functions, but also what the ever-changing face of environmentalism says about society and how students can help promote positive environmental change.

Minor Offered

- Minor in Earth and Environmental Sciences

Related Programs

- Environmental Sciences (p. 223)
- Geosciences (p. 256)
- Integrated Sciences and Math (p. 291)
- Liberal Studies: Environmental Emphasis (p. 330)
- Marine Studies: Marine Ecological Emphasis (p. 341)
- Marine Sciences (p. 356) Education (p. 461)

Requirements for the Minor

(23-24 credits)

Geosciences and Environmental Sciences majors may not select this minor.

ENV 100	Introduction to Environmental Sciences	4
GEO 100	Earth Systems Science	3
GEO 102	Earth Materials and Processes Lab	1
GEO 350	Soil and Surficial Processes	4
GEO 407	Hydrology and Water Resources	4
MAR 210	Marine Life Through Time	4
Elective		
Select one of the following:		3-4
ENV 200	Statistical and Computer Applications in the Natural Sciences	
ENV 205	Introduction to Geographic Information Systems (also cross listed as GLS-205)	
ENV 220	Weather and Climate Change	
ENV 375	Environmental Biogeochemistry	
GEO 168	Mesozoic Ruling Reptiles	
GEO 201	Elements of Mineralogy	
GEO 306	Sedimentology and Stratigraphy	

Total Credits 23-24

ENV 100 Introduction to Environmental Sciences 4 Credits

Examines how ecosystems function, with emphasis on the interactions between biological organisms and their physical environment, and the chemical processes that govern these interactions. The impact of human populations on natural ecosystems is investigated in detail using case studies from history and current events. The laboratory provides for hands-on experiences and/or short field trips to local sites for a better understanding of many of the concepts discussed. Weekday and weekend field trips may be required. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 100L.

ENV 100L Introduction to Environmental Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 100.

ENV 200 Statistical and Computer Applications in the Natural Sciences 4 Credits

This course introduces important statistical concepts, their application, and the usage of computer technology relevant to biological, environmental, geological, and marine problems. Students will learn various graphical and statistical techniques and how to execute them on personal computers. The curriculum emphasizes the integrated nature of these techniques and their importance to meaningful data evaluation and representation. Laboratory exercises are designed to emphasize useful solutions to problems found in many scientific disciplines using computer-based methodologies. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 200L.

ENV 200L Statistical and Computer Applications in the Natural Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 200.

ENV 205 Introduction to Geographic Information Systems (also cross listed as GLS-205) 3 Credits

This course introduces the computer-based concepts and skills of Geographic Information Systems (GIS). It covers the basic GIS concepts, such as map characteristics and projections, spatial data models and analysis, and relational databases. It explores data sources, data quality, and metadata, as well as implementation and management of specific GIS projects. Hands-on experience with ArcGIS software is provided through a series of student exercises completed throughout the semester. Students will also be taught how to process both vector and raster data using ArcGIS software. The course is relevant for students from numerous disciplines in the natural sciences, social sciences, and business, which require the analysis and graphical representation of spatial data. Three hours of lecture per week. Note: This course is cross-listed as GLS 205. Students may not receive credit for both ENV 205 and GLS 205.

ENV 220 Weather and Climate Change 3 Credits

This course introduces students to the concepts of weather and climate change. These concepts frame a continuum from short-term or daily changes in the atmosphere (meteorology) to those changes averaged over much longer periods of time (climatology). Students will learn the fundamentals of weather forecasting, the causes of natural variation in the Earth's climate, and the impact of human actions on the Earth's climate. Connections will be drawn to other current issues in the Earth system, including land use change, biodiversity, and pollution. Three hours of lecture per week.

Prerequisite(s): GEO 100 or permission of instructor.

ENV 375 Environmental Biogeochemistry 3 Credits

This course examines the biogeochemical interactions among various environmental components, including water, rock, soil, organisms, and atmosphere. Covered topics focus on the relation between the biosphere and changes in the Earth's environment and atmosphere. The transfer of energy and nutrients within terrestrial ecosystems also is explored. Case studies from various examples will be used to understand ecosystem dynamics. Long-term environmental change and present-day ecosystem restoration activities are examined in the context of biotic offsets and land-use planning. The biogeochemical cycles of some environmentally sensitive compounds and elements in natural systems, such as pesticides, mercury, and lead, also may be examined. Three hours of lecture per week.

Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121, CHE 122, CHE 123.

GEO 100 Earth Systems Science 3 Credits

Investigates the major global processes that occur on Earth. These processes can be grouped into four major systems: atmosphere, hydrosphere, lithosphere, and cosmosphere. Each system interacts with and affects the other systems creating, in a sense, a single Earth process. With this approach, the student will view the Earth as a whole, and understand that the many seemingly separate components that make up this planet are, in fact, a set of interacting processes, that operate in cycles through time, within a single global system. Three hours of lecture per week.

GEO 102 Earth Materials and Processes Lab 1 Credits

A hands-on laboratory experience involving the origin, significance, identification, and classification of Earth materials and processes. Mineral and rock specimens, soil and water samples, and topographic and geologic maps are utilized. Numerous field trips to local sites help students visualize many of the concepts discussed. One three-hour lab per week.

Prerequisite(s): concurrent enrollment in, or prior completion of, GEO 100 or GEO 113 is required.

GEO 168 Mesozoic Ruling Reptiles 3 Credits

A survey of the vertebrate groups that dominated the land (Dinosaurs), the seas (Mosasaurs, Plesiosaurs, Pliosaurs, Tylosaurs, and Ichthyosaurs) and the skies (Pterosaurs, Pterodactyls) during the Mesozoic Era. The course considers diversity of skeletal architectures and their reconstructed function and the often controversial, inferred anatomy, physiology, reproductive strategy, habit, and social behaviors of these animals that are different from mainstream reptiles, birds, and mammals. It also covers the paleogeographical, and paleoclimatological conditions that facilitated the evolutionary rise to dominance and diversification of these vertebrate groups and the debated causes of their eventual extinction. Three hours of lecture per week. Weekend field trips may be required.

GEO 201 Elements of Mineralogy 4 Credits

The physical properties, chemistry, atomic structure, crystallography, uses, and environmental impacts of important minerals of the lithosphere and biosphere are presented. In addition, lab assignments and exercises emphasize crystal symmetry and chemistry; polarizing microscope, ICP, and x-ray analytical techniques; the graphical display and interpretation of compositional data; optical properties of isotropic and uniaxial minerals; and the identification of mineral hand specimens. Three hours of lecture and one three-hour lab per week. At least one weekend field trip required. **Prerequisite(s):** GEO 100 or GEO 113, CHE 120, CHE 121 taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 201L.

GEO 201L Elements of Mineralogy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 201.

GEO 306 Sedimentology and Stratigraphy 4 Credits

The principles of weathering, erosion, transportation, and deposition of sediment are the focus of this course. Sediment characteristics are examined to identify the processes involved in transporting grains and the specific environment in which the grains were deposited. Students will learn how to collect, analyze, and interpret sedimentary data and how to interpret surface and subsurface stratigraphic data using various techniques, such as lithostratigraphic, biostratigraphic, and geophysical, correlations. Field trips will expose students to different sedimentary environments and provide opportunities for students to learn how to conduct fieldwork. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. **Prerequisite(s):** GEO 100.

Corequisite(s): GEO 306L.

GEO 306L Sedimentology and Stratigraphy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 306.

GEO 350 Soil and Surficial Processes 4 Credits

This course examines the physical, chemical, hydrological, and biological aspects of soil and their relation to geomorphologic development. Specific topics include descriptions of soil texture and structures, soil classification, soil colloids, soil redox and pH, and their effect on vadose zone water chemistry. Soil genesis and erosion controls, microbiology/ecology, nutrient cycles, and modern soil pollution from sludge and pesticide applications, as well as domestic and industrial chemical spills, also are discussed. The lab portion of the course introduces the basic techniques of soil analysis, both physical and chemical, and field survey methods. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** GEO 100 or GEO 113, and GEO 102.

Corequisite(s): GEO 350L.

GEO 350L Soil and Surficial Processes Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 350.

GEO 407 Hydrology and Water Resources 4 Credits

This course introduces the principles that govern both surface water and groundwater flows that have applications to societal water needs. Surface water topics cover the basics of the hydrologic cycle, the processes of precipitation, evapotranspiration, runoff, and infiltration, and various factors affecting water supply and water quality issues in a modern watershed. Groundwater topics examine the principles that govern flow through a porous medium and the basics of well hydraulics under different pumping conditions that community development requires. Laboratory exercises will give students hands-on experience with the delineation of watersheds, analysis of precipitation data, and flow contaminant transport modeling. The field portion of the laboratory includes runoff and stream discharge measurements, as well as hydraulic conductivity estimations from both slug and pumping tests. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, GEO 102, and MTH 105.

Corequisite(s): GEO 407L.

GEO 407L Hydrology and Water Resources Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 407.

MAR 210 Marine Life Through Time 4 Credits

Survey of the important developments in marine life over the last three billion years from the Pre-Cambrian evolution of one-celled organisms, through the Cambrian explosion of complex marine invertebrate life and subsequent diversification of backboned organisms in the Ordovician time, to the colonization of marginal marine and freshwater habitats in the Silurian-Devonian geological periods, and ultimately to extinctions during global crises of the late Devonian, Permian, Triassic, Cretaceous, and Pleistocene time intervals. The emphasis is on evolutionary adaptive breakthroughs within each phylum, particularly the significant morphological and anatomical innovations, and the subsequent radiation of these higher taxa into new habitats and niches through geologic time. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): GEO 100 or GEO 113, GEO 102 or BIO 115 or permission of instructor.

Economics (B.A.)

Program Overview

Rider's economics students master the tools needed to succeed in their careers and in their lives. Studying economics helps develop skills for careers in business, law, teaching, public administration and research, while also building an understanding of contemporary social issues. In this challenging world, few areas of study are more relevant and essential than economics.

Rider economics majors are in demand among consulting firms, corporations, private banking and financial institutions, government agencies and non-profit agencies. Many graduates begin their careers as analysts, then progress to management positions in business and government. An undergraduate degree in economics from Rider provides outstanding preparation for graduate study in economics, business and law.

Curriculum Overview

Our economics program offers a flexible curriculum that allows you to target your specific career goals, whether you are a business or liberal arts major. The program offers a Bachelor of Science through the College

of Business Administration, or a Bachelor of Arts through the College of Liberal Arts, Education and Sciences.

The curriculum allows students to select classes based on their area of interest. For example, a B.A. in economics with a minor in political science provides an excellent foundation for a career in law or politics.

Students with a double major in economics (B.S.B.A.) and finance are prepared for careers in the financial and corporate sectors.

Studies center on macroeconomics and microeconomics. Students become trained in economic theory while learning how to apply principles and concepts to specific problems. This is done via small class sizes so that students can interact closely with faculty.

A minor in economics also is available, allowing students from different fields of study international economics, public policy and economic theory.

Degree Offered

- B.S.B.A. in Economics
- B.A. in Economics

2. Please note that elective credits may be used to complete requirements in a second major or minor.

ECO 200 Principles of Macroeconomics 3 Credits

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 201 Principles of Microeconomics 3 Credits

Market price systems are analyzed. The nature and characteristics of consumer and producer behavior, the theory of pricing in competitive and noncompetitive markets, and determination of the distribution of output are evaluated. Welfare, social control, monopoly, and income inequality are explored in the light of price theory. The role of the United States in the world economy is explored.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

ECO 210 Intermediate Macroeconomics 3 Credits

An analytical study of modern aggregate economic theory. Emphasizes the measurement and determination of income, employment, and price levels, as well as economic policy in theory and practice.

Prerequisite(s): ECO 200 and ECO 201.

ECO 211 Intermediate Microeconomics 3 Credits

This course is designed to give the student a thorough understanding of microeconomic theory. As such, the course will analyze the behavior of both consumers and producers, and how this behavior determines the price and quantity observed in the market. The course objective is to provide students with the necessary theoretical background to enable them to solve meaningful and practical problems. Thus, the course is both theoretical and applied in its orientation. The course will emphasize that economic theory can be used not only to solve market oriented problems, but social and public policy problems as well.

Prerequisite(s): ECO 200 and ECO 201.

ECO 300 Business Conditions Analysis/Forecast 3 Credits

Business conditions change daily. Students study them as they change, learning to understand them in the light of economic theory, learning how each part of the economy is affected, and learning the advantages and limitations of the most reliable forecasting methods.

Prerequisite(s): ECO 200, MSD 201.

ECO 301 Managerial Economics 3 Credits

Intensively examines the theory of the firm with applications to the solution of such managerial problems as demand forecasting, the nature and behavior of costs, and product pricing. Introduces the use of simple mathematical and statistical tools that are employed with economic analysis for solving managerial problems.

Prerequisite(s): ECO 200 and ECO 201 and MSD 201 or permission of instructor.

ECO 305 International Trade and Investment 3 Credits

Studies the theory, institutions, and structures underlying the international flow of trade and investment. Topics are: the theory of international trade; balance of payment analysis; the international monetary system; adjustment to balance of payment disequilibrium; regional economic integration; the economic effects of trade restrictions; and trade and foreign investment problems of developing nations.

Prerequisite(s): ECO 200 and ECO 201.

ECO 315 Comparative Economic Systems 3 Credits

Provides a conceptual framework for classifying and comparing economic systems. Presents theory of the capitalist market economy and case studies of the U.S., Japanese, French, and Swedish economies. Examines theory of the centrally planned economy, its transition, and case studies of the Soviet and its successor states, Chinese, and East European economies. Case studies are necessarily limited, concentrating on selected topics, such as transition strategies, industrial policy, etc.

Prerequisite(s): ECO 200 and ECO 201.

ECO 325 Industrial Organization 3 Credits

Explores the relationship between market structure and performance. Topics include concentration in individual industries, product differentiation and entry barriers, pricing and marketing policies, and antitrust policies and their consequences.

Prerequisite(s): ECO 200 and ECO 201.

ECO 326 Economics of Sports 3 Credits

The overall objective of this course is to deepen student understanding of microeconomic principles by applying microeconomic concepts to the analysis of professional and amateur sports. This course will utilize concepts from many different microeconomic specialties, (primarily Industrial Organization, Labor Economics and Public Finance). The tools from these different microeconomic fields will be used to explain and analyze the operation of professional sports teams and leagues in the U.S. with an emphasis on baseball, football, basketball and hockey. International comparisons will be made between professional sports in the U.S. and the rest of the world. The course will also analyze the not-for-profit sports sector, focusing on college sports and the National Collegiate Athletic Association.

Prerequisite(s): ECO 201.

ECO 330 Labor Market Analysis 3 Credits

Intensive study of the economics of the labor market, which examines the determinants of labor supply and demand, and market equilibrium in the labor market. This enables the student to understand what determines wages, labor force participation, occupational choice, the extent of education and training, unemployment, poverty, union membership, and discrimination in the labor market.

Prerequisite(s): ECO 200 and ECO 201.

ECO 335 Economics of the Public Sector 3 Credits

Analyzes the economic roles of government: allocation; distribution; and stabilization. The course examines the tools used by governments, especially the federal government, such as taxation, expenditures, regulations and laws in order to achieve economic goals. The course will give special attention to social regulation.

Prerequisite(s): ECO 200 and ECO 201.

ECO 336 Economics of Health Care Systems 3 Credits

This course presents ways in which economic analysis can be used to explain issues in the health care industry. Microeconomic tools will be used to describe the behavior of consumers, producers, and third parties of the health care sector. The course also investigates the role of government in regulating the health care sector, and in providing services to the poor and elderly. Finally, we will use this foundation to examine some recent changes in this industry, and to analyze the most recent proposals for further changes.

Prerequisite(s): ECO 201 or HTH 205.

ECO 365 Post-Soviet Economy 3 Credits

Studies the contemporary post-Soviet economic system, with emphasis on institutions, policies and issues related to business opportunities in this area. Topics covered include the historic, geographic, political, and cultural setting, planning and plan implementation in the traditional system, current reforms and prospects for the future, with special reference to the foreign trade institutions and experience of foreign firms doing business in the post-Soviet Union and Eastern European countries.

Prerequisite(s): ECO 200 and ECO 201 or permission of instructor.

ECO 450 Seminar in Economic Research 3 Credits

Students in the course learn to conduct economic research by engaging in an actual community-based research project. At the beginning of the semester, students are assigned to a community-based organization. As a team, students meet with the client, devise a plan of action, collect and analyze data and other information, and write a report to the client. At the end of the semester, students present their findings to the client. Students are permitted to take ECO 450 up to two times for credit.

Prerequisite(s): Permission of instructor.

ECO 490 Independent Research and Study 3 Credits

Topic to be approved by professor and chairperson. Available for juniors and seniors. No more than 12 credits allowed toward graduation.

ECO 491 Internship/Independent Study 3 Credits

This course is available to qualified economics majors and minors. Evaluation is based on a performance appraisal provided by the participating firm and a project/paper judged by the major’s internship director. This course can be used as a business or free elective. Grading is done on a pass/fail basis.

Prerequisite(s): Permission of instructor.

English

Program Overview

English majors at Rider develop creativity and skills in language, writing, analysis, and critical thinking by taking both literature and writing courses. English majors receive attention and support from devoted faculty who help them develop their talents and skills as they learn to write intelligently and persuasively, to read with pleasure and understanding and to strengthen the powers of their imaginations.

On the pragmatic level, employers actively seek employees with critical thinking and writing skills. English majors go on to be authors, editors, journalists, teachers, professors, librarians, executives, and lawyers. They work in publishing, media, public relations, and other areas. Graduates of the English Department have published poetry, fiction, plays, and screenplays.

Curriculum Overview

English majors can focus their studies in the literature concentration or the writing concentration. Both concentrations offer substantial grounding in the rich heritage of world literature and in the cultural diversity of contemporary life. The cinema studies concentration is also an option for English majors, if they wish to focus on film analysis.

Literature Concentration

Students who are primarily interested in literature can choose from a wide variety of courses and subjects ranging from the Anglo-Saxon epic, *Beowulf*, to poets and novelists of the 21st Century, from 19th-century American slave narratives to dramatic and fictional works by Shakespeare, Woolf, Faulkner and Hurston.

Writing Concentration

Those who want to primarily develop their writing can choose a concentration offering intensive instruction in many kinds of writing, including creative writing (fiction, nonfiction, and poetry), critical reviewing and business writing.

Cinema Studies Concentration

Those who are drawn to film might choose a concentration in cinema studies and enroll in a variety of classes on film analysis, history, and theory, courses which also emphasize interpretive and writing skills.

Honors Program in English

Qualified majors may apply for honors in their senior year. A student must have a 3.25 cumulative average and a 3.5 average in English. Upon approval from the Department of English, a candidate for honors enrolls in ENG 497 Advanced Study, writes a thesis, and submits it for

departmental approval. The student must achieve a course grade of “B+” or better to graduate with honors in English.

English Major Requirements

Note: All declared English majors and minors must take the departmental gateway courses as prerequisites to upper-level major courses. The gateway courses should be taken in the sophomore year. All transfers into the major must take the gateway courses in the first two semesters after their transfer. (Transfer students may take the gateway courses concurrently with upper-level major courses.)

Majors and minors must receive a “C-” or above in each of the gateway courses to continue in the major. Those who receive a “C” or “C-” in any gateway course must meet with the individual professor teaching that course to discuss their academic progress. Majors and minors who receive a “D” or below in any gateway course must repeat the course and meet with the professor teaching that course. Gateway courses may be repeated only once in order to achieve a grade of “C-” or above. (The repeated course may be taken concurrently with other major courses.)

ENG 441	Seminar in American Lit
ENG 443	Seminar in Literary Modernism
ENG 445	Sem in Black/Multi-Ethnic Lit ¹
ENG 447	Global Literature ¹
ENG 455	Seminar in Chaucer

Select five courses from any of the following groups: 15

Each writing major may specialize in an area of his or her interest, choosing from the following courses. A student need not focus solely on one or the other category but may choose courses according to his or her needs and interests as a writer.

Creative Writing

ENG 303	Creative Writing: Poetry
ENG 304	Creative Writing: Fiction
ENG 305	Creative Writing: Nonfiction
ENG 311	Creative Writing: Playwriting
ENG 312	Creative Writing: Screen Writing
ENG 313	Creative Writing: Experimental Writing
ENG 400	Creative Writing: Advanced Creative Writing

Specialized Writing and Rhetoric

ENG 315	Topics in Specialized Writing
ENG 316	Theories of Writing & Tutoring
ENG 318	Food Writing
ENG 336	Grammar and Style
ENG 405	Advanced Prose Style

Workplace Writing

ENG 321	Workplace Writing
ENG 322	Workplace Writing: Grant Proposals, Fundraising and Development
ENG 323	Workplace Writing: Reviewing and Publishing
ENG 324	Workplace Writing: Online Contexts
ENG 407	Advanced Workplace Writing
ENG 491	Internship in Writing and Publishing

Total Credits 78-79

¹ Secondary Education-English majors are required to select either ENG 336 or ENG 411, **AND** either ENG 445 or ENG 447.

² **English Majors concentrating in writing may also take:**

- ENG 354 or ENG 361 Selected Topics in English (for 3 credits) to fulfill course requirements in the category as appropriate by the English Dept at the time such courses are offered
- ENG 490 Independent Research and Study (for 3 credits)
- ENG 491 Internship in Writing and Publishing (for 1-4 credits) with permission

Requirements for the Cinema Studies Concentration

Courses and Descriptions

ENG 205 Understanding Literature 3 Credits

The novel, the short story, drama, and poetry are studied, with a view to the insights to be gained from literature.

ENG 206 Introduction to Creative Writing 3 Credits

A workshop that introduces students to basic conventions and techniques of creative writing. Students will read and study published writing in multiple genres, such as short fiction, drama, poetry, and creative nonfiction, and write and revise their own creative pieces.

ENG 208 Arthurian Legends in Literature 3 Credits

The legends attached to King Arthur and the Knights of the Round Table have become cultural touchstones in England and the United States. This survey of medieval to contemporary Arthurian literature examines the legends and their written versions within their respective cultural, historical, philosophical and aesthetic contexts.

ENG 210 Major American Authors 3 Credits

An introductory course focusing on major American poets, novelists, essayists, and playwrights.

ENG 211 Major British Authors 3 Credits

An introductory course focusing on major British poets, novelists, essayists, and playwrights. Students will learn to understand, interpret, and evaluate literary works.

ENG 213 Literature and Mythology 3 Credits

The interrelationships that exist between literary works and folklore, ritual, and religious scriptures and beliefs are explored. The primary emphasis is on analyzing the presence of mythic patterns in specific literary works; the secondary emphasis is on theories of mythology.

ENG 214 Monsters in Literature 3 Credits

This course examines various texts on the topic of monsters. Students read and watch films, and explore the answers to the following: Who are they? Undead, alien, satanic, outcast, hidden, hostile, tragic. Where are they? Crossroads, arctic wastes, moors, abandoned buildings, forests, outer reaches, inside. What do they want? Revenge, bodies, lives, escape, life, contact, humanity.

ENG 215 Satire and Comedy 3 Credits

Explores these two related modes of literature with the primary emphasis on satire. Possible readings include works by Euripedes, Jonson, Shakespeare, Moliere, Voltaire, Pope, Swift, Dickens, Twain, Wilde, Waugh, Orwell, and Heller.

ENG 217 Intro To Shakespeare 3 Credits

Students in this course study Shakespearean drama on an introductory level through close reading, analysis, and discussion of selected plays. They learn the relevance and importance of Shakespeare's themes, characterizations, and imagery.

ENG 219 Literature and Violence 3 Credits

This course will examine and critique themes of violence that have become a pervasive and recurring artistic thread in classic literary texts. Through careful, close textual readings and critical analyses of thematically selected texts that contain multiple artistic representations of violence in varied literary genres, students will explore literary violence as a possible metaphor for understanding dimensions of power, control and dominance. In analytical studies of thematically selected texts, students will gain new insights and critical perspectives on modern American society and the social causes and ills of violence. Students will delve into the root, cause and meaning of violence and they will further grow to understand why and how violence still maintains a pervasive presence in their daily lives and in the very literature they read.

ENG 220 Literature & Society 3 Credits

Literature is examined, emphasizing human behavior as it relates to such social phenomena as war, alienation, social disorganization, injustice, and poverty.

ENG 221 Literature and Psychology 3 Credits

Students will study Freudian and other psychoanalytical concepts as they appear in literature, plus psychological patterns of behavior such as aggression, frustration, and submission, that have been utilized by creative literary artists to expand the reader's understanding of the human experience.

ENG 224 Science Fiction 3 Credits

This course is designed to introduce students to science fiction, its major themes and preoccupations, as well as some of its significant authors and genres. It has been argued that science fiction or "speculative" fiction represents a viable way to make sense of our everyday world. Our primary focus, therefore, will be on how these texts—written and visual—help us understand our culture and ourselves through encounters with alien and unfamiliar worlds, species, and technology. By the end of the course, students are expected to be able to critically engage with science fiction, and to identify its broad cultural impact.

ENG 226 Introduction to Film 3 Credits

Focuses on various cinematic techniques used to develop underlying thematic and symbolic concepts and to shape viewer response. Students will analyze classical and contemporary features for their masterful use of visual language.

ENG 228 Black American Lit 3 Credits

A survey of writings by black Americans, presented historically from early slave narratives through emancipation, reconstruction, the Harlem Renaissance, and literature from the 1930s to the present.

ENG 229 Multi-Ethnic Lit in America 3 Credits

Surveys the literature of various ethnic groups including African Americans, American Indians, Asian Americans, Hispanic Americans, Jewish Americans and European Americans.

ENG 230 Women In Literature 3 Credits

A range of literary presentations of the female experience and of the conditions of women's lives is explored. These works are placed in historical and social contexts in order to see behind and beyond traditional literary conventions.

ENG 236 Applied Grammar & Syntax 3 Credits

This course offers a review of the essential elements of English grammar and syntax and fosters analysis of these elements as they relate to meaning and rhetorical effects in notable argumentative and expository writing as well as in the student's own compositions. Focus is on both expert reading and expository writing. Changing attitudes toward usage, including influence of digital media on language use, are discussed. May be taken as preparation for, or independently of ENG 336, which addresses grammar, syntax, and style at a more advanced level.

Prerequisite(s): CMP120 or BHP 100; and CMP125 or CMP203 or BHP150.

ENG 240 Methods of Literary Analysis 3 Credits

The study and application of various modes of literary criticism practiced, including formal, structural, psychological, and sociocultural methods of analysis. Required of all English literature and writing majors.

ENG 250 Literary History I 3 Credits

Surveys British literature beginning with the old English epic of Beowulf and ending with the British Romantic writers of the early 1800s. There will be an emphasis on the cultural and historical contexts of the works discussed as well as an appreciation for the aesthetic qualities of the individual texts and the characteristics of literary movements. This course is a prerequisite to ENG 251 and is required of all English majors and minors.

ENG 251 Literary History II 3 Credits

Surveys American and British literature since the 1820s. There will be an emphasis on the cultural and historical contexts of the works discussed as well as an appreciation for the aesthetic qualities of the individual texts and the characteristics of literary movements. Required of all English majors and minors.

Prerequisite(s): ENG 250 or permission of the instructor or chairperson.

ENG 270 Major Poets 3 Credits

Studies major American and British poets.

ENG 275 Posthumanism: Bodies and Technology in Literature 3 Credits

This course explores the concept of posthumanism in speculative and futuristic literature. Who counts as human? How do advances in science and technology change what it means to be human? How much can we change our bodies before we stop being human? Categories of posthumanism that may be explored include virtual reality, cybercultures, and bodily transcendence; cyborgs; body modification, duplication, and replacement; cloning; genetic engineering; and postapocalyptic/ecocritical narratives.

ENG 280 Special Topics in Literature 3 Credits

Uses literary works to achieve insights into different areas of human experience. Topics change annually as announced by the English department.

ENG 281 Global Film History: Origins to 1960 3 Credits

Examines major technological and aesthetic developments in both American and international cinema of the period, with an emphasis on global cinema. From silent comedy and melodrama to German Expressionism and Soviet activist cinema; from French poetic realism and Italian Neo-realism to Hollywood sound cinema, this course will survey and assess the impact of influential movements, major film artists, and groundbreaking films of the period. ENG 281 is crosslisted with FMS 250.

ENG 282 Global Film History: 1961 to Present 3 Credits

Examines major technological, industrial and aesthetic developments in both American and international cinema of the period. From the decline of the studio system and the emergence of the 'New Hollywood' to the digital revolution; from the renaissance in Western and Eastern European cinemas to Latin American, Asian, and Middle Eastern cinema, this course will survey and assess the impact of influential movements, major film artists, and groundbreaking films of the period. ENG 282 is crosslisted with FMS 251.

ENG 284 Language of Film Analysis 3 Credits

Provides students with the fundamentals necessary for achieving beginning proficiency in methods of cinema studies scholarship. The course provides an in-depth introduction to concepts of film analysis, theory, and history, as well as to the field of cinema studies as an academic discipline. Through close analysis of selected films and readings, students will examine the various and complex ways in which formal elements shape meaning. Students also will study key concepts in film theory, applying these concepts as a further means of understanding the ways in which film positions viewers and mediates ideology. Required of all English majors and minors with a cinema studies concentration. ENG 284 is crosslisted with FMS 284.

ENG 285 American Film History: Origins to 1960 3 Credits

Examines major technological and aesthetic developments in American cinema as it grew from the days of one-reel silent shorts exhibited in storefront theaters through the days of studio productions exhibited in lavish picture palaces and featuring iconic stars the system manufactured and promoted. From the inception of sound and color, to the later development of lightweight equipment that freed filmmakers from the confines of the studio, from the "golden age" to the gradual decline of the Hollywood studio system in the 1950s, we will study the lasting genres that grew out of the system, the filmmakers who flourished and those who rebelled against the system, and the ground-breaking films that established the American film industry as a dominant force within the world. ENG 285 is crosslisted with FMS 252.

ENG 286 American Film History: 1961 to Present 3 Credits

Examines the transitions of Hollywood in the post-studio era— the rise of the 1960's-1970s New Hollywood and its ground-breaking films, the rise of the blockbuster as an industry standard; the responses of independent filmmakers and the avant-garde to blockbuster dominance; the transition from the Production Code to the ratings system, the move back to studio-owned theaters, and the emergence of digital cinema and CGI. We will look at how genres are being redefined, how major filmmakers are re-shaping their work to fit 21st century demands, how "gaming," YouTube, and other media sources are altering the very definition of cinema. ENG 286 is crosslisted with FMS 253.

ENG 290 The Short Story 3 Credits

Presents the development of the short story from the 19th century to the present with an emphasis on the techniques of plot, setting, characterization, theme, and point of view.

ENG 295 Human Relationships in Lit (honors) 3 Credits

Through in-depth analysis of significant pairs of literary works from a variety of time periods, students in this honors course will study the dynamics of human relationships as they are presented in literature. Emphasis will be on portrayal of interpersonal relationships as inflected by conventions, constraints, and taboos. Social and psychological theories will complement esthetic and formal analysis of fiction, drama, poetry, and film.

Prerequisite(s): 3.3 GPA.

ENG 303 Creative Writing: Poetry 3 Credits

A workshop analyzing the techniques of poetic expression, with a focus on the student's original experiments in traditional and contemporary verse forms.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 304 Creative Writing: Fiction 3 Credits

Students write original fiction and analyze the techniques of writing fiction in discussion of both their own drafts and published examples of the form.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 305 Creative Writing: Nonfiction 3 Credits

A workshop in Creative Nonfiction (aka Literary Nonfiction or Narrative Nonfiction, abbreviated CNF) in which students will write and read different forms of memoir and essay, including Personal Essay, Lyric Essay, Travel Writing, Oral History, and Personal Profiles. Creative Nonfiction (CNF) tells true stories using the literary techniques of fiction-writing, such as building dramatic scenes, establishing suspense, and developing a narrative sequence of events, or plot. CNF employs vivid sensory detail and builds characters and scenes to enhance the reader's experience of the story. Challenging the traditional journalist's stance of objectivity and emotional distance from her topics, CNF writers often put themselves into their stories to create a voice of reflection. We'll talk about what types of creative license CNF gives writers, and also about the ethics of storytelling, especially when your story's characters are real, living people.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 306 Creative Writing: Drama 3 Credits

Examines cultural developments in the United States from the late 19th century to the present. Topics include popular culture, intellectual history, gender history, literary history, film, institutions like museums and department stores, subcultures and countercultures, popular commemorations like World's Fairs, and political culture. Some of the largest trends explored include the development of the modern culture of consumption, the urban landscape, and the polarization of cultural values.

ENG 311 Creative Writing: Playwriting 3 Credits

A workshop teaching and analyzing how students write for the stage that pays particular attention to the demands of the genre. Through reading and writing assignments, students will discuss and analyze the development of their own dramatic scripts for theatrical performance. A portfolio of revisions will serve as a final for the course.

ENG 312 Creative Writing: Screen Writing 3 Credits

A workshop teaching and analyzing how students write for the screen, both television and film, that pays particular attention to the demands of the genre. Through reading and writing assignments, students will discuss and analyze the development of their own dramatic scripts for production. A portfolio of revisions will serve as a final for the course.

ENG 313 Creative Writing: Experimental Writing 3 Credits

A creative writing workshop dedicated to developing a wider range of literary techniques. For the purposes of this course, Experimental Writing is defined as writing that departs – in form, structure, or style – from the conventions of literary realism. Students will demonstrate proficiency in writing and reading experimental fiction, nonfiction, and poetry, with an emphasis on experimental narrative techniques such as metafiction, magic realism, the unreliable narrator, multi-genre and hybrid forms (works that blur the lines between poetry and prose, for example), nonlinear storytelling, fragmentation, and poetic techniques such as found text and readymades, self-imposed constraints, and the collage or mashup.

Prerequisite(s): ENG 206.

ENG 315 Topics in Specialized Writing 3 Credits

A workshop in which students will write on specialized topics chosen by the instructor.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 316 Theories of Writing & Tutoring 3 Credits

A workshop on writing and tutoring theory for students interested in becoming writing tutors or teachers.

Prerequisite(s): minimum GPA 3.0, sophomore standing, and permission of the instructor.

ENG 318 Food Writing 3 Credits

Food Writing is a thematically based course in essay writing. It develops student abilities to write effective informal prose while also extending their knowledge about food sources, preparation, and consumption. They learn through readings and exercises, however, that food writing is about more than food. It encompasses the pleasures of the table, history, culture, science, and politics.

ENG 321 Workplace Writing 3 Credits

A workshop in writing effectively to achieve specific practical purposes in various business and professional workplace environments.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 322 Workplace Writing: Grant Proposals, Fundraising and Development 3 Credits

Students employ their analytical and writing skills to research and write grants for non-profit organizations in their local or regional communities. Fundraising and development activities on behalf of area organizations introduce them to career opportunities in this growing field.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 323 Workplace Writing: Reviewing and Publishing 3 Credits

Students learn to write arts and literary criticism through studying the work of prominent critics in literature, theatre, film, dance, visual arts, and music. Students learn how to market themselves as potential reviewers for print and online publications.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 324 Workplace Writing: Online Contexts 3 Credits

This course will help students adapt their writing to online environments. A writing-intensive course, grounded in rhetorical principles, it focuses upon planning, writing and producing online texts distributed entirely through virtual portals. Students will write documents intended for a variety of virtual purposes, including E-mail, instant messages, text messages, blogs, wikis, workplace social-media, and online team collaborations.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 331 Medieval Literature 3 Credits

A seminar in Old and Middle English authors, such as Bede, Chaucer, and Kempe, and texts, such as Beowulf, moralities, and mystery cycles. Students may be introduced to linguistic issues, historical and political concerns and critical topics such as literacy, canon formation, and gender.

ENG 333 16th-Century Literature 3 Credits

A seminar on Renaissance literature including such writers as More, Wyatt, Surrey, Spenser, Sidney, Shakespeare, and Marlowe.

ENG 335 17th-Century Literature 3 Credits

A seminar on literature in England from 1600 to 1660, including such writers as Donne, Jonson, Browne, Herbert, and Marvell.

ENG 336 Grammar and Style 3 Credits

Provides students with a comprehensive knowledge of the conventions of English grammar, punctuation and syntax. Students will learn how to analyze the way words, phrases, sentences, and paragraphs work in expert writing, and they will apply this knowledge to their own writing, with emphasis on argument, exposition, and analysis.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 340 Restoration & 18th Century Lit 3 Credits

An exploration of literature in England from 1660 to 1800, including such writers as Astell, Pope, Finch, Swift, Defoe, Fielding, Johnson, and Wollstonecraft.

ENG 344 Biblical and Classical Influence in Literature 3 Credits

This course surveys biblical and classical influences on western literature from Shakespeare to Atwood. Its primary objective is to introduce selections from the Old and New Testaments, Homer, Aeschylus, Sophocles, Ovid, and Dante so that you may recognize and appreciate references and allusions to these stories - their enduring influence - in early modern literature and culture.

ENG 345 Romantic Literature 3 Credits

A seminar on literature in England from 1780-1830, emphasizing a close study of the poetry of Blake, Wordsworth, Coleridge, Shelley, Byron, and Keats, as well as important novelists and female poets of the period.

ENG 346 Victorian Literature, 1830-1900 3 Credits

A seminar on literature in England from 1830 to 1900, emphasizing close study of the literary culture, including such writers as Dickens, Browning, Mill, and Ruskin.

ENG 347 20th-Century British Lit 3 Credits

A seminar on literature in the United Kingdom from 1900 to 1960, emphasizing formal experiments as well as historical contexts, and including such writers as Joyce, Woolf, Beckett, Rhys, Delaney, and Eliot.

ENG 348 Contemporary British Lit 3 Credits

A study of contemporary literature written in English after 1945, in the U.K. and elsewhere, by writers of British, Irish, Scots, Welsh, and other cultural traditions. Poetry, fiction, literary essays, and drama will be included.

ENG 351 19th-Century American Lit 3 Credits

A seminar on literature in the United States from 1800 to 1900, emphasizing literary genres and the definition of an American literature as distinct from English literature.

ENG 352 20th-Century American Lit 3 Credits

A seminar on American literature from 1900 to 1967, including such writers as O'Neill, Hemingway, Faulkner, Porter, Richard Wright, Stevens, Moore, and Williams.

ENG 353 Contemporary American Lit 3 Credits

A seminar on American literature from 1945 to the present.

ENG 354 Selected Topics in English 1-4 Credits

Exploration of special topics, themes or methodologies in English. This course may be repeated for credit on different topics.

ENG 355 Sel. Topics: Bib & Classic Influ 3 Credits

Exploration of special topics, themes or methodologies in English. This course may be repeated for credit on different topics.

ENG 356 Selected Topics in English 1-4 Credits

Exploration of special topics, themes or methodologies in English. This course may be repeated for credit on different topics.

ENG 361 Selected Topics in English 1-4 Credits

Exploration of special topics, themes or methodologies in English. This course may be repeated for credit on different topics.

ENG 362 The Novel 3 Credits

A close reading of novels from various historical periods and cultures.

ENG 363 The Drama 3 Credits

A close reading of drama, with attention to cultural contexts and the genres of tragedy and comedy.

ENG 364 The Poem 3 Credits

A close reading of poetry, with attention to historical periods and poetic genres.

ENG 365 Short Fiction 3 Credits

A close reading of short fiction from a variety of cultures, with attention to the various genres of short fiction: short-short, short story, long story, and novella.

ENG 371 Classics of Children's Lit 3 Credits

An analytic study of classic and contemporary literature for children. Students will be introduced to a variety of critical approaches, including psychoanalytic, social/historical and feminist. The course may be of particular interest, but is not restricted, to students majoring in education or psychology.

ENG 372 Child Lit:Adolescent Exper 3 Credits

A study of enduring literature examines how exemplary writers chronicle the challenges of growing up. Texts may include influential Young Adult fiction, classics such as *The Catcher in the Rye* and *To Kill a Mockingbird*, and contemporary fiction by important writers who focus on the relevant themes.

ENG 375 Literature and Sexuality 3 Credits

The study and application of theories of gender and sexuality in various periods of British and/or American literature. Possible course topics include the literature of AIDS, the literary history of sexuality, Gothic literature and sexuality, colonialism and desire, and sensibility and sexuality in the later 18th century.

ENG 381 Studies in Film Genre 3 Credits

Provides an in-depth examination of a variety of film genres (such as the gangster film, the western, the musical, the screwball comedy, the science fiction film, and the horror film, among others), to be examined through the perspective of film genre theory. Through close analysis of selected films and readings, students will define the aesthetic and thematic patterns characterizing specific genres, and will trace the development of those genres within the dual contexts of the film industry and cultural ideology. Note: This course is cross-listed as FMS 381. Students may not get credit for both ENG 381 and FMS 381.

ENG 382 Comparative Film Directors 3 Credits

Provides an in-depth comparative study of major American, international, independent and avant-garde filmmakers. Through close analysis of selected films and readings, students will define the aesthetic and thematic patterns characterizing the work of individual directors and will draw meaningful comparisons among directors sharing similar aesthetic and thematic approaches. Students will trace the artistic development of directors through their careers, assessing individual works in the context of film criticism and theory, and in the context of multi-layered intertextual influences. Note: This course is cross-listed as FMS 382. Students may not get credit for both ENG 382 and FMS 382.

ENG 383 Global Cinemas 3 Credits

Provides an in-depth study of the history and defining characteristics of national cinemas. Through close analysis of selected films and readings, students will examine the general movements within the history and development of various national cinemas, with attention to film historiography when considering how patterns are to be viewed in light of the culture, politics, and history of a particular producing nation. Further, students will trace and evaluate the influence of selected film movements and issues upon both cinematic and critical practice. Note: This course is cross-listed as FMS 383. Students may not get credit for both ENG 383 and FMS 383.

ENG 384 Film Adaptation 3 Credits

Provides an in-depth study of intertextual influence, as film enters into "dialogue" with various literary forms. Through close analysis of selected films and various forms of literature-including novels, graphic novels, short stories, plays, poetry, and journalism- students will study the aesthetic specificity of both film and literary genres and will analyze the transformative qualities at play when a work is adapted from page or stage to screen. Note: This course is cross-listed as FMS 384. Students may not get credit for both ENG 384 and FMS 384.

ENG 400 Creative Writing: Advanced Creative Writing 3 Credits

An advanced workshop in creative writing.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 405 Advanced Prose Style 3 Credits

Analyzes prose styles in English from the Renaissance to the present, focusing on the development of syntax, diction, and content. Students will be encouraged to imitate stylistic models and to develop their own prose style.

Prerequisite(s): completion of composition requirements or permission of instructor.

ENG 407 Advanced Workplace Writing 3 Credits

Students will learn to adapt their writing skills to match specialized writing needs in publishing; corporate and personal finance; health, medicine, science, and technology.

ENG 411 History of the Eng Language 3 Credits

A seminar on the historical development of the English language, including phonetics, diversity, and present-day usage.

ENG 425 Seminar in Shakespeare 3 Credits

A seminar on Shakespearean drama and poetry.

ENG 435 Seminar In Milton 3 Credits

A seminar on Milton's lyric poetry, *Samson Agonistes*, *Paradise Lost*, and prose.

ENG 441 Seminar in American Lit 3 Credits

A seminar focusing on literature by one writer or by a small group of writers.

ENG 443 Seminar in Literary Modernism 3 Credits

A seminar on literature from 1900 to 1940, by British, Irish, and American writers such as Hardy, Yeats, Woolf, Joyce, Eliot, Williams, Hurston, and Faulkner.

ENG 445 Sem in Black/Multi-Ethnic Lit 3 Credits

A seminar focusing on literature by black, Native American, Hispanic, Asian American and first-generation immigrant writers.

ENG 447 Global Literature 3 Credits

An in-depth study of the recent literature in English of one or more writers whose cultural identification is with one of the former colonies of the British Empire, as it was defined at the beginning of the 20th century. Literature in the English language, written by authors of African, Caribbean, Pacific Island, East Asian, or South Asian cultures may be included.

ENG 455 Seminar in Chaucer 3 Credits

An examination of Geoffrey Chaucer's writings from a number of critical perspectives, including close reading of the texts in Middle English, context and history, gender and sexuality, linguistics, and paleography and codicology.

ENG 484 Seminar in Cinema Studies 3 Credits

Provides an in-depth study of areas central to discussion and debate in the field of cinema studies (such as film violence, cinema censorship, feminism and film, post-colonial cinema, African-American cinema, blaxploitation, The French New Wave, and Italian Neorealism, among others). Through close analysis of selected films and readings, students will examine the impact of specialized influential movements in film history and in film theory and criticism. Further, students will trace and evaluate the influence of selected film movements and issues upon both cinematic and critical practice. Note: This course is cross-listed as FMS 484. Students may not get credit for both ENG 484 and FMS 484.

ENG 485 Cinema Studies for Teachers 3 Credits

ENG 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. For ENG 490 this may be an original literary or writing project. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

ENG 491 Internship in Writing and Publishing 1-6 Credits

Students work under the supervision of English faculty and on-site supervisors to complete real-world assignments in writing, publishing, and cinema studies. Their performance is assessed by professional standards. A minimum of 48 hours of field work per credit is required. Students report to faculty and on-site supervisors regularly, submit all work required by on-site supervisors, maintain a log, and complete a final report. Three credits required to count toward English writing concentration. Restricted to juniors and seniors.

ENG 497 Advanced Study 3 Credits

Qualified majors may apply for honors in their senior year. Upon approval from the department of English, a candidate for honors enrolls in Advanced Study, writes a thesis, and submits it for departmental approval. The student must achieve a course grade of "B+" or better to be graduated with honors in English.

Prerequisite(s): senior standing; 3.5 GPA in English; 3.25 cumulative GPA.

Environmental Sciences

Program Overview

All Environmental Sciences majors will participate in extensive fieldwork, exploring a rich diversity of ecological environments and acquiring the knowledge and skills required for a wide range of potential careers. Depending on an individual student's area of interest, Environmental Sciences majors can study such subdisciplines as climate change, forest dynamics, coastal processes, cell and molecular biology, environmental biogeochemistry, organic and inorganic chemistry, plant ecology, or sustainability studies; the latter is available as a multidisciplinary (non-GEMS) minor program.

Curriculum Overview

Drawing on programs and faculty from the Departments of Biology, Chemistry and Physics, and Geological, Environmental, and Marine Sciences (GEMS), the Environmental Sciences program crosses social, political, and scientific boundaries.

Honors Program in Environmental Sciences

Graduation with honors in Environmental Sciences is awarded in recognition of majors who have demonstrated outstanding academic ability. Enrollment in the program is by invitation of the GEMS faculty. Eligibility requirements include a minimum GPA of 3.5 in courses required for the major and the satisfactory completion of a senior thesis. In addition, an honors candidate must maintain an overall minimum GPA of 3.0.

Environmental Sciences Major Requirements

(64-65 credits)

Core Requirements		42-43
See LAS Core Page (p. 454)		
Geological, Environmental, and Marine Sciences		
ENV 100	Introduction to Environmental Sciences	4
ENV 200	Statistical and Computer Applications in the Natural Sciences	4
ENV 205	Introduction to Geographic Information Systems (also cross listed as GLS-205)	3
ENV 220	Weather and Climate Change	3
GEO 100 or GEO 113	Earth Systems Science or Environmental Geology (also cross listed as GLS-113)	3
GEO 102	Earth Materials and Processes Lab	1
GEO 350	Soil and Surficial Processes	4
GEO 407	Hydrology and Water Resources	4
Biology		
BIO 115	Principles of Biology I	4
BIO 116	Principles of Biology II	4
BIO 350	General Ecology	4
Chemistry		
BCH 225	Introduction to Organic and Biochemistry	4
CHE 120	Principles of Chemistry	3
CHE 121	Principles of Chemistry Lab	1
CHE 122	Intro to Chemical Systems	3
CHE 123	Quantitative Methods Lab	1
Physics		
PHY 100	Principles of Physics I	3
PHY 100L	Principles of Physics I Lab	1
Electives		
Select three courses from the following, one from each group:		10-11

Group A

Biotic Processes		
BIO 272 & 272L	Intro to Marine Biology and Marine Biology Laboratory	
BIO 321	Microbiology	
BIO 335	Plant Biology	
BIO 372	Behavior of Marine Organisms: Evolutionary Approach	
MAR 227	Introduction to Field Marine Science: Subtropical Environments	
MAR 228	Introduction to Field Marine Science: Boreal Environments	
MAR 229	Introduction to Field Marine Science: Tropical Environments	
MAR 360	Plankton Ecology	

Group B

Abiotic Processes		
ENV 350	Principles of Environmental Toxicology	
ENV 375	Environmental Biogeochemistry	
GEO 201	Elements of Mineralogy	
GEO 305	Petrology and Petrography	
GEO 306	Sedimentology and Stratigraphy	
MAR 330	Chemical Oceanography	
MAR 410	Physical Oceanography	

Group C

Social Processes		
AMS 250	America and the Future	
AMS 304	Technology and Science in America	
BHP 231	Honors Sem: Natural Adventures	
BHP 232	Honors Seminar: Science and Politics of the Jersey Shoreline	
BHP 259	Honors Seminar: The Environment: a Conflict of Interest	
IND 316	Nature's Business	
PHL 320	Philosophy of Science	
POL 215	Global Politics	
POL 328	Environmental Policy	
POL 329	Comparative Environmental Policy	
SOC 225	Population Study	

Total Credits 106-108

Majors will also take either MTH 105 or MTH 210 to fulfill their math core requirement.

Upper-level MAR courses require MAR 120 and MAR 121 as prerequisites.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Course	Title	Semester Credit Hours
Year 1		
Fall Semester		
CMP 120	Expository Writing ¹	3
MAR 120	Oceanography	3
MAR 121	Introductory Oceanography Lab	1
BIO 115	Principles of Biology I	4
BIO 115L	Principles of Biology I Lab	0
MTH 105	Algebra and Trigonometry ¹	4
NCT 010	Freshman Seminar	0
Semester Credit Hours		15
Spring Semester		
CMP 125	Research Writing	3

Environmental Science Elective from Group A, B, or C		3-4
Semester Credit Hours		14-15

Year 4**Fall Semester**

Five Elective Courses ²	15
<hr/>	
Semester Credit Hours	15

Spring Semester

Select one of the following: 4

GEO 350	Soil and Surficial Processes	
GEO 407	Hydrology and Water Resources	
Four Elective Courses ²		12
Semester Credit Hours		16
Total Credit Hours for Graduation		121-122

Note: Natural and Physical Science core requirement included in major.

¹ For course placement information see <http://www.rider.edu/offices-services/orientation/course-placement>

² Please note that elective credits may be used to complete requirements in a second major or minor.

Courses and Descriptions

ENV 100 Introduction to Environmental Sciences 4 Credits

Examines how ecosystems function, with emphasis on the interactions between biological organisms and their physical environment, and the chemical processes that govern these interactions. The impact of human populations on natural ecosystems is investigated in detail using case studies from history and current events. The laboratory provides for hands-on experiences and/or short field trips to local sites for a better understanding of many of the concepts discussed. Weekday and weekend field trips may be required. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 100L.

ENV 100L Introduction to Environmental Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 100.

ENV 200 Statistical and Computer Applications in the Natural Sciences 4 Credits

This course introduces important statistical concepts, their application, and the usage of computer technology relevant to biological, environmental, geological, and marine problems. Students will learn various graphical and statistical techniques and how to execute them on personal computers. The curriculum emphasizes the integrated nature of these techniques and their importance to meaningful data evaluation and representation. Laboratory exercises are designed to emphasize useful solutions to problems found in many scientific disciplines using computer-based methodologies. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 200L.

ENV 200L Statistical and Computer Applications in the Natural Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 200.

ENV 205 Introduction to Geographic Information Systems (also cross listed as GLS-205) 3 Credits

This course introduces the computer-based concepts and skills of Geographic Information Systems (GIS). It covers the basic GIS concepts, such as map characteristics and projections, spatial data models and analysis, and relational databases. It explores data sources, data quality, and metadata, as well as implementation and management of specific GIS projects. Hands-on experience with ArcGIS software is provided through a series of student exercises completed throughout the semester. Students will also be taught how to process both vector and raster data using ArcGIS software. The course is relevant for students from numerous disciplines in the natural sciences, social sciences, and business, which require the analysis and graphical representation of spatial data. Three hours of lecture per week. Note: This course is cross-listed as GLS 205. Students may not receive credit for both ENV 205 and GLS 205.

ENV 220 Weather and Climate Change 3 Credits

This course introduces students to the concepts of weather and climate change. These concepts frame a continuum from short-term or daily changes in the atmosphere (meteorology) to those changes averaged over much longer periods of time (climatology). Students will learn the fundamentals of weather forecasting, the causes of natural variation in the Earth's climate, and the impact of human actions on the Earth's climate. Connections will be drawn to other current issues in the Earth system, including land use change, biodiversity, and pollution. Three hours of lecture per week.

Prerequisite(s): GEO 100 or permission of instructor.

ENV 290 Directed Research and Study in Environmental Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the environmental sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in weekly meetings with the instructor, and communicating the findings by writing a final project report.

ENV 340 Environmental Field Methods and Data Analysis 3 Credits

This course will provide students with practical experience in field methods and data analyses within the environmental sciences. The course will include advanced activities incorporating field-based exercises, GIS analyses, statistical analyses, and database management. Students will also complete an independent project focused on a relevant topic. Local field trips during lab and on weekends may be required.

Prerequisite(s): MTH 105, GEO 100, GEO 102, and ENV 100; or Permission of Instructor.

ENV 350 Principles of Environmental Toxicology 3 Credits

A comprehensive description of the important principles of toxicology, including the absorption, distribution, metabolism, and excretion of toxic substances. Target organs systems will be discussed as well as mechanisms of carcinogenesis and teratogenesis. Specific groups of toxins to be discussed include: pesticides, metals, radiation, solvents and vapors, and plant and animal toxins. Three hours of lecture per week.

Prerequisite(s): BCH 225 or CHE 211, BIO 115 or BIO 117.

ENV 375 Environmental Biogeochemistry 3 Credits

This course examines the biogeochemical interactions among various environmental components, including water, rock, soil, organisms, and atmosphere. Covered topics focus on the relation between the biosphere and changes in the Earth's environment and atmosphere. The transfer of energy and nutrients within terrestrial ecosystems also is explored. Case studies from various examples will be used to understand ecosystem dynamics. Long-term environmental change and present-day ecosystem restoration activities are examined in the context of biotic offsets and land-use planning. The biogeochemical cycles of some environmentally sensitive compounds and elements in natural systems, such pesticides, mercury, and lead, also may be examined. Three hours of lecture per week.

Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121, CHE 122, CHE 123.

ENV 480 Senior Thesis 3 Credits

A senior thesis is optional for environmental science majors. However, a senior thesis is required for eligibility to graduate with honors in environmental science. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

ENV 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

ENV 491 Internship in Environmental Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

GEO 100 Earth Systems Science 3 Credits

Investigates the major global processes that occur on Earth. These processes can be grouped into four major systems: atmosphere, hydrosphere, lithosphere, and cosmosphere. Each system interacts with and affects the other systems creating, in a sense, a single Earth process. With this approach, the student will view the Earth as a whole, and understand that the many seemingly separate components that make up this planet are, in fact, a set of interacting processes, that operate in cycles through time, within a single global system. Three hours of lecture per week.

GEO 102 Earth Materials and Processes Lab 1 Credits

A hands-on laboratory experience involving the origin, significance, identification, and classification of Earth materials and processes. Mineral and rock specimens, soil and water samples, and topographic and geologic maps are utilized. Numerous field trips to local sites help students visualize many of the concepts discussed. One three-hour lab per week.

Prerequisite(s): concurrent enrollment in, or prior completion of, GEO 100 or GEO 113 is required.

GEO 113 Environmental Geology (also cross listed as GLS-113) 3 Credits

Examines the fundamental premise that "our society exists by geologic consent subject to change without notice" by studying a number of important geologic processes and cycles, and the hazards and/or resources they present to individuals, society, and the natural environment. Topics discussed include earthquakes, volcanism, stream flooding, coastal erosion, climate change, and water, soil, mineral, and energy resources. Cost/benefit considerations, hazard mitigation concepts, economic and political ramifications, and the interactions among the lithosphere, hydrosphere, atmosphere, and biosphere also are presented. The course is designed to give non-science majors a deeper appreciation of their connection to the surrounding geologic environment, leading to better, more informed business, political, policy, and personal decisions. Three hours of lecture per week. Note: This course is cross-listed as GLS 113. Students may not get credit for both GEO 113 and GLS 113.

GEO 168 Mesozoic Ruling Reptiles 3 Credits

A survey of the vertebrate groups that dominated the land (Dinosaurs), the seas (Mosasaurs, Plesiosaurs, Pliosaurus, Tylosaurus, and Ichthyosaurs) and the skies (Pterosaurs, Pterodactyls) during the Mesozoic Era. The course considers diversity of skeletal architectures and their reconstructed function and the often controversial, inferred anatomy, physiology, reproductive strategy, habit, and social behaviors of these animals that are different from mainstream reptiles, birds, and mammals. It also covers the paleogeographical, and paleoclimatological conditions that facilitated the evolutionary rise to dominance and diversification of these vertebrate groups and the debated causes of their eventual extinction. Three hours of lecture per week. Weekend field trips may be required.

GEO 201 Elements of Mineralogy 4 Credits

The physical properties, chemistry, atomic structure, crystallography, uses, and environmental impacts of important minerals of the lithosphere and biosphere are presented. In addition, lab assignments and exercises emphasize crystal symmetry and chemistry; polarizing microscope, ICP, and x-ray analytical techniques; the graphical display and interpretation of compositional data; optical properties of isotropic and uniaxial minerals; and the identification of mineral hand specimens. Three hours of lecture and one three-hour lab per week. At least one weekend field trip required. Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121 taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 201L.

GEO 201L Elements of Mineralogy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 201.

GEO 290 Directed Research and Study in Geosciences 1-4 Credits

Directed Research and Study in Geosciences will provide an opportunity for freshman and sophomore students to gain hands-on research experience in the geosciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

GEO 305 Petrology and Petrography 4 Credits

The origin, evolution, and terrestrial distribution of igneous and metamorphic rocks are presented and detailed. Classroom lectures and discussions emphasize rock geochemistry, mineralogic variability, the constraints placed on petrogenetic models by physio-chemical studies of natural and synthetic systems, and the relation of the various rock types to current plate tectonic theory and other whole-earth processes. The laboratory emphasizes the continuing development of optical microscopy skills, the identification of rock texture and mineralogy in thin section and hand specimen, the optical determination of mineral composition, and the recognition of possible petrogenetic processes as recorded in the rocks themselves. Three hours of lecture and one three-hour lab per week. Two weekend field trips required. Prerequisite(s): GEO 201, and CHE 122 and CHE 123 or taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 305L.

GEO 305L Petrology and Petrography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 305.

GEO 306 Sedimentology and Stratigraphy 4 Credits

The principles of weathering, erosion, transportation, and deposition of sediment are the focus of this course. Sediment characteristics are examined to identify the processes involved in transporting grains and the specific environment in which the grains were deposited. Students will learn how to collect, analyze, and interpret sedimentary data and how to interpret surface and subsurface stratigraphic data using various techniques, such as lithostratigraphic, biostratigraphic, and geophysical, correlations. Field trips will expose students to different sedimentary environments and provide opportunities for students to learn how to conduct fieldwork. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): GEO 100.

Corequisite(s): GEO 306L.

GEO 306L Sedimentology and Stratigraphy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 306.

GEO 310 Structural Geology 4 Credits

The origin, distinguishing characteristics, and geographic distribution of deformational structures of the Earth's crust. In the laboratory, GPS, GIS, geologic maps, and three-dimensional problems are used in the study of typical surface and subsurface geologic problems. Three hours of lecture and one three-hour lab per week. Weekday and/or weekend field trips may be required. Prerequisite(s): GEO 100 or GEO 113, GEO 102.

Corequisite(s): GEO 310L.

GEO 310L Structural Geology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 310.

GEO 350 Soil and Surficial Processes 4 Credits

This course examines the physical, chemical, hydrological, and biological aspects of soil and their relation to geomorphologic development. Specific topics include descriptions of soil texture and structures, soil classification, soil colloids, soil redox and pH, and their effect on vadose zone water chemistry. Soil genesis and erosion controls, microbiology/ecology, nutrient cycles, and modern soil pollution from sludge and pesticide applications, as well as domestic and industrial chemical spills, also are discussed. The lab portion of the course introduces the basic techniques of soil analysis, both physical and chemical, and field survey methods. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, and GEO 102.

Corequisite(s): GEO 350L.

GEO 350L Soil and Surficial Processes Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 350.

GEO 407 Hydrology and Water Resources 4 Credits

This course introduces the principles that govern both surface water and groundwater flows that have applications to societal water needs. Surface water topics cover the basics of the hydrologic cycle, the processes of precipitation, evapotranspiration, runoff, and infiltration, and various factors affecting water supply and water quality issues in a modern watershed. Groundwater topics examine the principles that govern flow through a porous medium and the basics of well hydraulics under different pumping conditions that community development requires. Laboratory exercises will give students hands-on experience with the delineation of watersheds, analysis of precipitation data, and flow contaminant transport modeling. The field portion of the laboratory includes runoff and stream discharge measurements, as well as hydraulic conductivity estimations from both slug and pumping tests. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, GEO 102, and MTH 105.

Corequisite(s): GEO 407L.

GEO 407L Hydrology and Water Resources Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 407.

GEO 480 Senior Thesis 3 Credits

A senior thesis is optional for geosciences majors. However, a senior thesis is required for eligibility to graduate with honors in geosciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

GEO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

GEO 491 Internship in Geosciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 120 Oceanography 3 Credits

Investigates the interrelationships among the geological, chemical, physical, and biological aspects of oceanography. Topics include origin and evolution of ocean basins; physical characteristics of modern oceans; seawater chemistry; ocean and atmosphere interactions; ocean currents; waves and tides; coastal processes; biological productivity; and diversity, distribution and adaptations of marine organisms. Throughout the course, emphasis is placed on the processes that connect the seemingly separate topics to each other and to human life. Weekend field trips may be required. Three hours of lecture per week. Note: This course is cross-listed as GLS 120. Students may not get credit for both MAR 120 and GLS 120.

MAR 121 Introductory Oceanography Lab 1 Credits

Introduction to the fundamental aspects of geological, chemical, physical, and biological oceanography. Students learn through inquiry-based, hands-on exercises and activities using actual data collected in the lab and in the field. Independent projects and local field trips during lab and on weekends may be required. One three-hour lab per week.

Corequisite(s): MAR 120 or GLS 120 or as prerequisite(s).

MAR 210 Marine Life Through Time 4 Credits

Survey of the important developments in marine life over the last three billion years from the Pre-Cambrian evolution of one-celled organisms, through the Cambrian explosion of complex marine invertebrate life and subsequent diversification of backboned organisms in the Ordovician time, to the colonization of marginal marine and freshwater habitats in the Silurian-Devonian geological periods, and ultimately to extinctions during global crises of the late Devonian, Permian, Triassic, Cretaceous, and Pleistocene time intervals. The emphasis is on evolutionary adaptive breakthroughs within each phylum, particularly the significant morphological and anatomical innovations, and the subsequent radiation of these higher taxa into new habitats and niches through geologic time. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): GEO 100 or GEO 113, GEO 102 or BIO 115 or permission of instructor.

MAR 210L Marine Life Through Time Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 210.

MAR 227 Introduction to Field Marine Science: Subtropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in subtropical environments, emphasizing shallow subtidal and intertidal environments such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include the diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a subtropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 228 Introduction to Field Marine Science: Boreal Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in boreal environments, emphasizing the rocky shallow subtidal and intertidal environments. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; day-night fluctuations in tide pool chemistry; plankton dynamics; predator-prey relationships; the physical processes and chemical properties of water; and comparisons of wave-exposed and wave-protected sides of a shoreline. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a boreal environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 229 Introduction to Field Marine Science: Tropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in tropical environments, such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a tropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 290 Directed Research and Study in Marine Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the marine sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

MAR 325 Marine Vertebrates 4 Credits

A survey of the biology of marine vertebrate animals, including fish (jawless fish, sharks, rays, and bony fish), reptiles (sea turtles and sea snakes), sea birds, and mammals (manatees, seals, and whales). The evolution, physiology, natural history, ecological relationships, and human interactions of these groups are emphasized. Three hours of lecture and one three-hour lab per week. Field trips may be required. Prerequisite(s): BIO 272 and BIO 272L.

Corequisite(s): MAR 325L.

MAR 325L Marine Vertebrates Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 325.

MAR 330 Chemical Oceanography 4 Credits

Introduction to the chemical aspects of the oceans and their influence on marine ecosystems and Earth processes. Emphasis is placed on chemical and physical properties of seawater, atmosphere-ocean interactions, biogeochemical cycles with marine components, production and destruction of marine organic matter, chemical ecology, and marine pollution. During the lab portion of this course, students gain hands-on experience in analyzing ocean water samples, experimental design, and interpreting marine chemical data. Three hours of lecture and one three-hour lab per week. Weekend field trips and independent projects may be required. Prerequisite(s): CHE 120, CHE 121, MAR 120, and MAR 121; or permission of instructor.

Corequisite(s): MAR 330L.

MAR 330L Chemical Oceanography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 330.

MAR 340 Marine Processes and Environments: Seminar 3 Credits

This course is designed as a seminar course. Therefore, students will learn to lead class discussions, to analyze and critique peer-reviewed journal articles, and to enhance their presentation skills. Students will interpret graphical, spatial, and numerical data to support their positions. Content will emphasize the interactions among marine processes, biological features, and geologic landforms.

Prerequisite(s): MAR 120 or GEO 100; GEO 306.

MAR 360 Plankton Ecology 4 Credits

Examines the diversity, physiology, and ecology of marine phytoplankton and zooplankton. Students will survey the dominant plankton groups, their distribution, nutritional requirements, growth kinetics, and behavior. Planktonic predator/prey interactions and food web dynamics will be discussed. Students will also examine the interdisciplinary nature and role of plankton in biogeochemical cycles. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): MAR 120 and MAR 121; or BIO 116.

Corequisite(s): MAR 360L.

MAR 360L Plankton Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 360.

MAR 380 The Learning and Teaching of Marine Science 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

MAR 401 Marine Ecology 4 Credits

The purpose of this course is to introduce students to fundamental principles in ecology, as it relates to marine systems. Topics include the marine environment and its influence on the organisms living there; biodiversity and speciation; factors regulating population dynamics in marine systems; larval and fisheries ecology; species interactions such as predation, competition, and symbiosis; factors regulating productivity and energy flow in marine systems; and marine conservation. Hands-on laboratory exercises will provide students with the opportunity to design and conduct experiments related to marine ecology, and to collect, analyze, and interpret data from those experiments. Ecosystem modeling will also be introduced. Three hours of lecture and one three-hour lab per week. Weekend field trips may be introduced. Prerequisite(s): BIO 272, BIO 272L.

Corequisite(s): MAR 401L.

MAR 401L Marine Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 401.

MAR 410 Physical Oceanography 3 Credits

Introduction to the physical aspects and processes of the oceans and their influence on marine ecosystems and Earth processes. Topics include distribution of salinity and water temperature and their effect on water movement, the oceanic heat budget, atmospheric and oceanic interactions, ocean currents including surface and deep water circulation, waves, tides, and medium- to small-scale circulation features. Throughout the course, emphasis is placed on how these physical processes affect the biology and chemistry of the ocean. Three hours of lecture per week. Weekend field trips may be required.

Prerequisite(s): MAR 120.

MAR 480 Senior Thesis 3 Credits

A senior thesis is optional for marine sciences majors. However, a senior thesis is required for eligibility to graduate with honors in marine sciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the marine sciences major and permission of department chair.

MAR 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

MAR 491 Internship in Marine Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 580 Ind Marine Sci Field Study 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

Ethics

Program Overview

The ethics minor not only helps prepare students for a variety of graduate programs such as law, medicine, and business, but also helps students explore important questions such as how ethics should interpret war, business practice and poverty.

Minor Offered

- Minor in ethics

Courses and Descriptions

PHL 100 Plato and Aristotle 3 Credits

The beginnings of Western scientific and humanistic thought among the early Greeks and their progress into the two great systems of Plato and Aristotle. Selections from Plato and Aristotle are read and discussed to determine the meaning and significance of philosophical ideas that have subsequently influenced the whole history of Western civilization.

PHL 102 Philosophical Thinking 3 Credits

An introduction to philosophical thought with an emphasis on the enduring questions and problems of philosophy. We will explore such questions as: how do I know I am not dreaming? Is there an external world? What is truth? Is there a self? Is there a God? What is the relationship between the mind and the body? How can I tell right from wrong? What makes government legitimate? What is justice? What is the meaning of life? We will consider answers to these questions from diverse philosophical traditions, reading such philosophers as Plato, Descartes, Zhuangzi, Hume, Vasubandhu, Berkeley, Aquinas, Avicenna, Udayana, Kant, Mill, Russell, Camus, and Nishitani.

PHL 110 Logic and Language 3 Credits

A study of the logical structure of argumentation in ordinary language, with an emphasis on the relation of logic to the uses of language in practical affairs. Traditional informal fallacies are studied as well. Discussions explore the nature of validity, truth, meaning, and evidence in relation to the evaluation of arguments.

PHL 115 Ethics 3 Credits

A combined historical and systematic analysis of the problems of ethics. Such problems as the nature and meaning of moral values and judgments, moral responsibility and freedom, conscience and happiness, the good life, and the relativity of value, are explored through the writings of such philosophers as Plato, Aristotle, Aquinas, Kant, Mill, and Nietzsche.

PHL 120 American Philosophy 3 Credits

The development of philosophical thought in the United States from the colonial era to the 20th century. Studies such thinkers as Edwards, Jefferson, Emerson, Thoreau, Peirce, James, Dewey, and King, and their ideas on human nature, free will, religion, morality, and politics.

PHL 125 Philosophies of Education 3 Credits

Studies classical and contemporary theories of the nature, structure, and aims of education, including major works of such philosophers as Plato, Rousseau, and Dewey. The course will also introduce students to methods of critical philosophical analysis.

PHL 130 Political Philosophy 3 Credits

An introduction to the problems of political philosophy with an emphasis on recent and contemporary issues, such as the conflict between liberal and conservative ideologies, fascism, revolution, civil disobedience, and the concept of legitimate political authority.

PHL 202 Social Philosophy 3 Credits

Emphasizes social ethics through critical studies of such contemporary problems as abortion, euthanasia, the death penalty, pornography and censorship, animal rights, drug use, sexual morality, environmental ethics, and world hunger.

PHL 203 Business Ethics 3 Credits

Surveys and examines ethical problems concerning the institutions and practices of contemporary business. Problems considered include: the conflicts of economic freedom and social responsibility; the relation of profits to work and alienation; the responsibilities of business to employees, minorities, consumers and the environment; the role of truthfulness in business practices; and the ethics of self-fulfillment and career ambitions. Readings selected from works of contemporary and historical philosophers, social theorists, and business people.

PHL 207 Asian Philosophy 3 Credits

A survey of the principal philosophical perspectives of Asia. Emphasis on the traditional Indian schools of Hinduism, Jainism, and Buddhism, Chinese Confucianism and Taoism, and the development of Zen Buddhism in China and Japan. Philosophical topics include: mystical experience, the ultimate nature of reality, the existence of a soul, the causes of human suffering, and the possibility of release, the nature of virtue and its development, and the nature of society and government.

PHL 210 Symbolic Logic 3 Credits

An introduction to logic from the standpoint of modern symbolic methods, including techniques of formal deductive proof, quantification, the logic of relations, and properties of formal deductive systems. Discussions focus on philosophical issues in recent and contemporary logical theory.

PHL 215 Environmental Ethics 3 Credits

A comprehensive introduction to environmental ethics that examines the major theoretical approaches, including anthropocentric (human-centered), zoocentric or sentientist (animal-centered), and biocentric or ecocentric (nature-centered) value systems, as well as the most important critiques of these ethical approaches. We will examine and analyze several classical ethical theories that are particularly relevant to a study of contemporary environmental controversies. We will also address specific issues such as biodiversity and wilderness preservation; human use of animals as food, entertainment, and research subjects; environmental racism and toxic dumping; sustainable development, population and consumption. Students will analyze and discuss the ethical dimensions of several contemporary environmental controversies.

PHL 225 Modern Philosophy 3 Credits

Examines one of the most exciting periods in the history of philosophy during which philosophers from Descartes to Kant tried to come to terms with the following questions: What is knowledge? Can we know the physical world exists? Can we have scientific knowledge? Can we know God exists? Can we even know whether we exist? The works of Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume and Kant are read and discussed.

PHL 226 Limits of Reason: 19th Century Philosophy 3 Credits

Studies the nature and meaning of reason, freedom, individuality, and society in the writings of philosophers such as Fichte, Hegel, Schopenhauer, Emerson, Thoreau, Comte, Mill, Spencer, Marx, and Nietzsche. Examination of the impact of such philosophies as the dialectical theory of history, transcendentalism, evolutionary theory, positivism, and existentialism on ideas about the nature and limits of human reason.

PHL 230 Philosophy of the Sexes 3 Credits

Studies philosophical views of the differences between the sexes, sexual equality, love, marriage, and the family from ancient Greece to the 20th century. Texts from the contemporary women's and men's movements will also be examined.

PHL 252 The Nature of Art 3 Credits

An inquiry into the nature of art, creativity, aesthetic experience, and value. Special attention to the importance of art in relation to the nature of man and society. Readings from classical theories of art (Plato, Hegel, Schopenhauer, Croce, Santayana), as well as from contemporary analyses of 20th-century art.

PHL 300 Philosophy and Civilization 3 Credits

An investigation of the rise and fall of civilizations in history, studying philosophical questions such as is history cyclical? Linear? Progressive? Directed toward a final goal? What is the role of the individual in history? Of economic, political, sociological, and psychological causes? Does history have a meaning? The works of St. Augustine, Vico, Hegel, Marx, and Toynbee, and the contemporary debate about the "clash of civilizations" between Islam and the West will be discussed.

PHL 303 Philosophy of Law 3 Credits

An examination and analysis of selected topics including classical and contemporary theories in the philosophy of law and moral philosophy. Such topics as the nature of the law and legal reasoning, the legal enforcement of morality, protection of personal liberty, and the moral justification of punishment are considered. Such philosophers as Aquinas, Austin, Holmes, Bentham, Hart, and Dworkin are read and discussed.

PHL 304 Medical Ethics 3 Credits

Introduces the student to ethical problems associated with the practice of medicine, the pursuit of biomedical research, and health care social policy. The course will explore such issues as: Is a physician morally obligated to tell a terminally ill patient that he or she is dying? Is society ever justified in enacting laws that would commit an individual, against his or her will, to a mental institution? Does society have a moral obligation to ensure that all its members have access to health care? To what extent, if at all, is it ethically acceptable to clone a human being? Under what conditions is human experimentation ethically acceptable?

PHL 305 Philosophy of Religion 3 Credits

An inquiry into the meaning, significance, and fundamental problems of religion as they appear in their philosophical perspective. The relation between religion and science, between faith and reason; religious experience, religious truth, and symbolism, etc. will be explored. Selections from the works of Anselm, Aquinas, Augustine, Paley, Hume, Kant, James, and Wittgenstein will be discussed.

PHL 310 Problems in 20th-Cent Philo 3 Credits

Consideration of major philosophical movements in the 20th century such as phenomenology, existentialism, pragmatism, and analytic philosophy. Within these movements such topics as the function of analysis, language and meaning, the nature of values, the nature of persons, the synthetic-analytic distinction, the mind-body problem, and the possibility of metaphysics are considered. The work of such figures as Wittgenstein, Russell, Heidegger, Husserl, Sartre, Whitehead, and Dewey are read and discussed.

PHL 315 Existentialism 3 Credits

Historical development and contemporary problems of existentialism with emphasis on the nature of man, his ability to know his situation, the relation between existence and essence, and the meaning of human life and activity. The works of such figures as Kierkegaard, Sartre, Heidegger, Camus, Kafka, Beckett, Buber, Laing, and Frankl are read and discussed.

PHL 320 Philosophy of Science 3 Credits

The logic of fundamental concepts of science and scientific methods are studied. Patterns of explanation are examined to understand the functions of laws, theories, and predictions in science. Inquiry is made into the relation between mathematics and empirical science; similarities and distinctions between the natural and social sciences. The role of science in human affairs and the value of scientific knowledge.

PHL 334 Theories of Knowledge 3 Credits

An investigation of selected, representative theories of knowledge from classical and contemporary sources. Considers the analytic-synthetic distinctions, necessary truth, and the foundations of empirical knowledge. Such philosophers as Leibniz, Hume, Kant, Russell, and Quine are read and discussed.

PHL 336 Philosophy of Mind 3 Credits

An investigation of the nature, existence, and capacities of the mind and self in the light of recent philosophical and psychological theories, including psychoanalysis and behaviorism. Considers such topics as the interaction of mind and body, the unconscious, minds and machines, freedom of thought and action.

PHL 343 Theories of Reality 3 Credits

An examination of metaphysical problems with an emphasis on philosophical views of human nature from ancient Greece to contemporary evolutionary theories. The writings of such classical, modern, and contemporary figures as Plato, Aristotle, Descartes, Kant, Hegel, and Darwin are read and discussed. Issues studied include the relation between mind and matter, freedom and determinism, and the existence of God.

PHL 348 Indian Philosophy 3 Credits

Consideration of major movements in the philosophical tradition of India. Emphasis on the disputes between the traditional Hindu and Buddhist schools of the classical period over logic, knowledge, and reality. Philosophical topics include: skepticism, the problem of universals, realism and idealism, the nature of perception, the problem of induction, the nature of causality, and the problem of identity over time. Philosophers such as Nagarjuna, Vasubandhu, Vatsyayana, Dharmakirti, and Udayana will be read and discussed.

PHL 358 Chinese Philosophy 3 Credits

Consideration of major movements in the philosophical tradition of China. Emphasis on the political philosophies of ancient China. Topics include: human nature and the development of virtue, the nature and purpose of government, and the cognitive value of mystical experience. Philosophers such as Confucius, Laozi, Xunzi, Mencius, Mozi, and Zhuangzi will be read and discussed.

PHL 360 Contemporary Ethics 3 Credits

An examination of recent and contemporary challenges to traditional ethical theory including such movements as logical positivism, cultural relativism, feminism, environmentalism, multiculturalism, and postmodernism. Such problems as the meaning and cognitive status of value judgments, the relation between fact and value, the relativity of values, and how value judgments can be justified are considered.

PHL 368 Japanese Philosophy 3 Credits

Consideration of major movements in the philosophical tradition of Japan, with an emphasis on Zen Buddhism in Medieval Japan and the Kyoto school in the 20th century. Topics include: the use of meditation and koans in Zen practice, the relationship between practice and enlightenment, the nature of time, meaning and nihility, and the relationship between science and religion. Philosophers such as Kukai, Mumon, Dogen, and Nishitani will be read and discussed.

PHL 402 Nietzsche and Nihilism 3 Credits

A seminar dealing with Nietzsche's provocative ideas on Nihilism and the possibility of creating meaning, value, and truth for human existence. Many of his important works are read, analyzed, and critically discussed. Recent scholarly interpretations of Nietzsche's philosophy are considered.

Prerequisite(s): any previous philosophy course or permission of instructor.

PHL 404 Philosophy of Wittgenstein 3 Credits

Seminar involving a concentrated study of Wittgenstein's contributions to philosophy with special attention to his analysis of language, meaning, and mental concepts.

Prerequisite(s): any previous philosophy course or permission of instructor.

PHL 406 Philosophy of David Hume 3 Credits

Seminar involving a concentrated study of Hume's contributions to philosophy, including his work on epistemology, metaphysics, ethics, philosophy of science, and philosophy of religion.

Prerequisite(s): any previous philosophy course or permission of instructor.

PHL 407 Philosophy of Hannah Arendt 3 Credits

Seminar involving a concentrated study of the philosophy of Hannah Arendt with special attention to her analysis of action, thought, and freedom.

Prerequisite(s): any previous philosophy course or permission of instructor.

PHL 408 The Philosophy of William James 3 Credits

Seminar involving a concentrated study of William James' contributions to philosophy with special attention to his pragmatism, pluralism, and radical empiricism. Many of James' philosophical works are read, analyzed, and critically discussed. Recent scholarly interpretations of James' philosophy are considered.

PHL 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

PHL 491 Internship in Philosophy 1-4 Credits

Students will work under supervision within an area hospital, corporation, or legal agency. The specific duties and tasks will be developed jointly by the intern, intern agency, and faculty supervisor. Within the hospital setting, students will work with the Hospital Medical Ethics Committee. Within the corporate setting, there will be two types of internships: students will work in the corporate office responsible for addressing the ethical issues that arise in the business environment; or students will work in a department that allows them to explore the potential business applications of their philosophic intellectual training. Within the legal setting, students will work with the federal magistrate, prosecutor, or public defender, exploring issues in the philosophy of law that arise in the practice of law. Students must have completed four philosophy courses, one at the 300 level, before applying for the internship. No more than six credits will be allowed toward graduation. A member of the department of philosophy will supervise the internship.

Prerequisite(s): juniors and seniors with a minimum of 2.7 cumulative GPA and 3.0 GPA in philosophy, or permission of the department of philosophy.

PHL 494 Research Senior Philos Thesis 1 Credits

Supervised by a faculty member, the Philosophy major chooses a topic, composes an outline and a bibliography. Must be completed prior to enrolling in PHL 495.

PHL 495 Senior Philosophy Thesis 3 Credits

In a tutorial setting, the Philosophy major will write a thesis which serves as the Capstone Experience in the Department.

Prerequisite(s): PHL 494.

European Area Studies

Program Overview

This minor helps students gain opportunities to learn another language and have an extra edge for their future careers, as well as assisting them in gaining knowledge on a variety of different cultures, practices, and beliefs that will make students more well-rounded in the future.

Total Credits 21

- ¹ Students who place out of foreign language 200 must take foreign language 201 and one additional foreign language course at the 300 or 400 level. Students who place out of foreign language 200 and foreign language 201 must complete one foreign language course at the 300 or 400 level.

- ² Foreign language majors and minors may only take one area-specific course from their major or minor program.

Student Abroad or domestic experience within a European linguistic context or business environment—study, service-learning or internships—may meet some of the requirements upon consultation with the student's advisor. Students must take at least one course in the European Area Studies Minor upon completion of Study Abroad or a domestic experience as described above.

Independent Research and Study courses and Baccalaureate Honors courses may be substituted in consultation with the Area Studies Program director.

EUR 250 Intro to European Area Studies 3 Credits

This multi-disciplinary course introduces students to European Area Studies, and focuses upon how Europe has been conceptualized as a social, cultural, economic and political entity. Subjects surveyed through materials drawn from multiple disciplines and media include geography, ecology and climate; principal language systems and their development; historical, political and economic developments from antiquity to the modern era; architecture, city development and design; contemporary cultural life; and the formation and organization of the European Union. Required foundation courses for the European Area Studies minor.

Event Planning and Production

Program Overview

Event planning and production is an interdisciplinary minor that combines the study of communication, marketing and management. With the rapid growth of non-profit, educational, corporate, recreational, and entertainment events, this minor provides both theoretical and practical training in event planning and management.

The curriculum emphasizes public relations and effective writing, various strategic approaches to business management, and the corporation-consumer relationship. The minor has a strong applied component and approved internship experiences are recommended for all students.

Total Credits	27

Courses and Descriptions

COM 107 Writing for the Media 3 Credits

Introduces students to interviewing and persuasive writing techniques for print and electronic public relations and advertising formats. Teaches techniques for creating effective digital audio-visual aids and working with digital audio and video.

COM 240 Public Relations 3 Credits

Introduces current theories and practices of public relations, with emphasis on facilitating two-way communication with various publics. Explores approaches to public relations problems by critically analyzing case studies and applying theories and techniques to realistic situations.

COM 261 Web Design I 3 Credits

Introduces students to digital graphics, text, audio and video for Web design using Adobe Creative Suite. Students will learn the basics of audio, video, graphic, and interactive software along with theories of design and perception that underlie effective presentation of digital messages.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

COM 280 Issues in Event Planning 3 Credits

Offers students education in event planning, production, and supervision for varied professional applications. Emphasis will be placed on planning, budgeting, and organizing small and large events for educational, institutional, non-profit, and professional groups. Students will participate in the entire process of event planning, with specific experiences in applying communication theory to actual projects.

Prerequisite(s): COM 240 or MKT 200.

COM 341 Publicity Methods 3 Credits

Applies communication theory to writing and editorial processes and production techniques to create public relations materials; includes press releases, industrial publications, social media, trade publications, brochures, newsletters, stockholder reports, and multimedia platforms.

Prerequisite(s): COM 107, COM 240, or permission of instructor.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MKT 200 Marketing Principles 3 Credits

This course examines market characteristics, consumer buying habits and motives, and functions of marketing within the framework of the strategic marketing planning process. Concepts and current practices in product development, pricing, promotion, distribution, and international marketing are studied.

MKT 320 Consumer Behavior 3 Credits

The nature and determinants of consumer behavior are studied, with attention given to the influence of socio-psychological factors such as personality, small groups, demographic variables, social class, and culture on the formation of consumer attitudes, consumption patterns, and purchasing behavior.

Prerequisite(s): MKT 200; Required for advertising majors.

MKT 260 Service Marketing 3 Credits

Focuses on the unique challenges of managing services and delivering quality service to customers. Emphasis is placed on the total organization, and how effective marketing and customer focus must be coordinated across multiple functions. The course is applicable to service organizations and to organizations that depend on service excellence for competitive advantage. Topics include customer-focused management, and customer satisfaction, retention, lifetime value and profitability. Students will learn to map services, understand customer expectations, and develop relationship marketing strategies.

Prerequisite(s): MKT 200.

CBA 110 Introduction to Business 3 Credits

COM 105 Communication, Culture and Media 3 Credits

Provides a detailed investigation and analysis into the nature, history, scope, adequacy, and limitations of mass communication and examines the reciprocal influence of the media on culture and society.

COM 440 Cases & Campaigns in PR 3 Credits

Critically analyzes public relations case problems in industry, labor, education, government, social welfare, and trade associations. Emphasizes problem solving through the use of communication theories, public relations techniques, creative thinking, and the development of professional goals and standards. Employs realistic simulation exercises and actual case studies to develop and critique students' ability to demonstrate this knowledge in professional situations.

Prerequisite(s): COM 341 or permission of instructor.

ECO 200 Principles of Macroeconomics 3 Credits

A collective view of income receiving and spending sectors of the national economy, including households, businesses, and governments. Issues discussed: What determines the level of output, income, and employment achieved by the economy? What determines the growth of national output and employment? National income accounting, income and employment theory, monetary system, general price level, business cycle, government policies designed to provide for full employment, price stability, and economic growth are also covered.

Prerequisite(s): Place into MSD 105 based on SAT or ACT Score, OR place into MSD 105/MTH 102 by passing College Placement, OR passing MTH 100S with a grade of 'Y', OR passing MSD 104, OR having transferred in any college level MSD or MTH class.

PSY 100 Introduction to Psychology 3 Credits

An orientation to psychology, covering major facts, principles and concepts about human and animal behavior and experience, re-search findings, major problems, basic vocabulary, methodologies, and contributions in the field. Topics include psychology as a science; human development; individual differences; intelligence and its measurement; special aptitudes and interests; personality and social behavior; motivation and emotion; frustration and personality deviations; and learning, thinking, remembering and forgetting.

Film and Media Studies

Program Overview

The film and media studies minor approaches film and media from interdisciplinary humanities and cultural studies perspectives, providing students with a comprehensive and nuanced understanding of media within their experience and the world.

Film and Media Studies Minor Requirements

(21 credits)

The required Foundation Course, ENG 284/FMS 284, should be taken early in the minor.

Students must complete a minimum of five (5) of the seven (7) Film and Media Studies Program courses uniquely counted toward the 21-credit minor. In other words, no more than two (2) courses counting toward the 21-credit FMS minor can be used toward major or minor requirements in other areas, whether in English, Communication, American Studies, Law and Justice, Languages, Literatures and Cultures, etc.

(21 credits)

Choose at least one course from each group, no more than two from Technical Aspects. You must take a minimum of four FMS-designated courses from among those listed in groups 2, 3, and 4.

I. Foundation Course (required)

ENG 284/FMS 284	Language of Film Analysis
-----------------	---------------------------

II. Film Theory and Aesthetics Courses (choose at least one)

FMS 260	Great Performances in Film
FMS 300	Special Topics in Film and Media Studies ¹
FMS 342	Artists of the Cinema
FMS 381	Studies in Film Genre
FMS 382	Comparative Film Directors
FMS 384	Film Adaptation
FMS 484	Seminar in Cinema Studies
AMS 214	Special Topics in American Studies (The Films of Stanley Kubrick P. O. D.)
AMS 214	Special Topics in American Studies (New York Directors: Allen, Scorsese, and Lee P. O. D.)
AMS 214	Special Topics in American Studies (Steven Spielberg in America P. O. D.)
AMS 215	Alfred Hitchcock in America
MUS 309	Film Music

III. Film History, Media, and Culture Courses (choose at least one)

FMS 250	Global Film History: Origins to 1960
FMS 251	Global Film History: 1961 to Present
FMS 252	American Film History: Origins to 1960
FMS 253	American Film History: 1961 to Present
ENG 383	Global Cinemas
COM 291	Documentary Film and Video
COM 328	Sitcoms and American Culture

IV. Technical Aspects Courses (choose at least one)

FMS 286	Writing Short Screenplays for Digital Cinema
COM 131	Fundamentals of Video Production
COM 234	Audio Production
COM 235	Digital Filmmaking
COM 331	Television Production
ENG 312	Creative Writing: Screen Writing
THE 300	Acting for the Camera

Total Credits	0
---------------	---

¹ Depending on the topic, this course may count as a Group II, III, or IV course; TBD as courses are offered.

- ² Prerequisite: FRE 201, placement test at 300 level or above, or FRE 300 or above.
- ³ Prerequisite: GER 201, placement test at 300 level or above, or GER 300 or above.
- ⁴ Prerequisite: SPA 201, placement test at 300 level or above, SPA 300 or above.

Junior and Senior FMS minors also may take:

FMS 490 Independent Research and Study
FMS 491 Internship in Film and Media Study

FMS 490 and 491 will fulfill requirements in the category designated as appropriate by the FMS Director; both courses require permission of Director.

Students minoring in Film and Media Studies are encouraged to consider majoring in Film, Television, and Radio or in English with a Cinema Studies Concentration.

Courses and Descriptions

FMS 250 Global Film History: Origins to 1960 3 Credits

Examines major technological and aesthetic developments in both American and international cinema of the period, with an emphasis on global cinema. From silent comedy and melodrama to German Expressionism and Soviet activist cinema; from French poetic realism and Italian Neo-realism to Hollywood sound cinema, this course will survey and assess the impact of influential movements, major film artists, and groundbreaking films of the period. FMS 250 is cross-listed with ENG 281.

FMS 251 Global Film History: 1961 to Present 3 Credits

Examines major technological, industrial, and aesthetic developments in both American and international cinema of the period, with an emphasis on global cinema. From the decline of the studio system and the emergence of the "New Hollywood" to the digital revolution; from the renaissance in Western and Eastern European cinemas to Latin American, Asian, and Middle Eastern cinema, this course will survey and assess the impact of influential movements, major film artists, and groundbreaking films of the period. FMS 251 is cross-listed with ENG 282.

FMS 252 American Film History: Origins to 1960 3 Credits

Examines major technological and aesthetic developments in American cinema as it grew from the days of one-reel silent shorts exhibited in storefront theaters through the days of studio productions exhibited in lavish picture palaces and featuring iconic stars the system manufactured and promoted. From the inception of sound and color, to the later development of lightweight equipment that freed filmmakers from the confines of the studio, from the "golden age" to the gradual decline of the Hollywood studio system in the 1950s, we will study the lasting genres that grew out of the system, the filmmakers who flourished and those who rebelled against the system, and the ground-breaking films that established the American film industry as a dominant force within the world. FMS 252 is cross-listed with ENG 285.

FMS 253 American Film History: 1961 to Present 3 Credits

Examines the transitions of Hollywood in the post-studio era— the rise of the 1960s-1970s New Hollywood and its ground-breaking films, the rise of the blockbuster as an industry standard; the responses of independent filmmakers and the avant-garde to blockbuster dominance; the transition from the Production Code to the ratings system, the move back to studio-owned theaters, and the emergence of digital cinema and CGI. We will look at how genres are being redefined, how major filmmakers are re-shaping their work to fit 21st century demands, how "gaming," YouTube, and other media sources are altering the very definition of cinema. FMS 253 is cross-listed with ENG 286.

FMS 260 Great Performances in Film 3 Credits

Examines major accomplishments in film acting from the silent era to the present day. Students will acquire knowledge of the historical and critical contexts and the artistic vocabulary necessary to understanding, appreciating and assessing screen performances in a range of genres— from comedy and the musical, to the melodrama, psychological thriller, and "hard-boiled" film noir. Students will be asked to read, evaluate, and analyze film performance texts, as well as to research and write about performances in numerous films.

FMS 284 Language of Film Analysis 3 Credits

Provides students with the fundamentals necessary for achieving beginning proficiency in methods of cinema studies scholarship. The course provides an in-depth introduction to concepts of film analysis, theory, and history, as well as to the field of cinema studies as an academic discipline. Through close analysis of selected films and readings, students will examine the various and complex ways in which formal elements shape meaning. Students also will study key concepts in film theory, applying these concepts as a further means of understanding the ways in which film positions viewers and mediates ideology. Required of all Film and Media Studies minors. FMS 284 is cross-listed with ENG 284.

FMS 286 Writing Short Screenplays for Digital Cinema 3 Credits

Writing Short Screenplays for Digital Cinema will focus solely on the creation of a short screenplay for digital film. The course will ask that students conceive of and execute a viably producible screenplay, shooting script, and industry pitch for the modern market.

FMS 300 Special Topics in Film and Media Studies 3 Credits

Courses in specialized and interdisciplinary areas of Film and Media Studies explore all three phases of the media experience: the industry that produces, distributes and exhibits; the textual products themselves; and audience reception of these products. FMS 300 Special Topics in Film and Media Studies courses will focus on each of the phases individually and/or on intersections of all three phases. Special topics courses will devote attention to the relationship of film to both traditional as well as new media; the relationship of film to the other arts; the relationship of film to the ancillary products and industries it both creates and depends upon for financial profit; and the relationship of film as an industry and institution to the various cultural institutions film and media texts routinely represent.

FMS 340 Film and Media Audiences 3 Credits

Provides students with the fundamentals necessary for understanding media audiences and reception within the interdisciplinary framework of film and media studies. The course introduces students to the field of audience and reception studies, including theory, empirical scholarship and history. Students will learn about who composed audiences, how they behaved, how they responded to the medium and the texts it delivered, how they interpreted what it meant to be an audience, how audiences were defined and treated by others, both today and historically. This will include audiences of movies, radio, television and news media.

FMS 342 Artists of the Cinema 3 Credits

Provides the opportunity to delve into the work of an individual film artist (whether a director, producer, screenwriter, cinematographer, costume designer, art director, musical composer, actor) or to examine a creative team (various combinations of a director, actor, cinematographer, screenwriter) that has collaborated in producing a series of films together. The course will pose the daunting question: Who is the author of the film? Even when studying individual artists, we will explore the influences and the working relationships that have shaped their work, and we will look outward to the way in which they have influenced other artists of their own generation and beyond.

FMS 381 Studies in Film Genre 3 Credits

Provides an in-depth examination of a variety of film genres (such as the gangster film, the western, the musical, the screwball comedy, the science fiction film, and the horror film, among others), to be examined through the perspective of film genre theory. Through close analysis of selected films and readings, students will define the aesthetic and thematic patterns characterizing specific genres, and will trace the development of those genres within the dual contexts of the film industry and cultural ideology. Note: This course is cross-listed as ENG 381. Students may not get credit for both ENG 381 and FMS 381.

FMS 382 Comparative Film Directors 3 Credits

Provides an in-depth comparative study of major American, international, independent and avant-garde filmmakers. Through close analysis of selected films and readings, students will define the aesthetic and thematic patterns characterizing the work of individual directors and will draw meaningful comparisons among directors sharing similar aesthetic and thematic approaches. Students will trace the artistic development of directors through their careers, assessing individual works in the context of film criticism and theory, and in the context of multi-layered intertextual influences. Note: This course is cross-listed as ENG 382. Students may not get credit for both ENG 382 and FMS 382.

FMS 383 Global Cinemas 3 Credits

Provides an in-depth study of the history and defining characteristics of national cinemas. Through close analysis of selected films and readings, students will examine the general movements within the history and development of various national cinemas, with attention to film historiography when considering how patterns are to be viewed in light of the culture, politics, and history of a particular producing nation. Further, students will trace and evaluate the influence of selected film movements and issues upon both cinematic and critical practice. Note: This course is cross-listed as ENG 383. Students may not get credit for both ENG 383 and FMS 383.

FMS 384 Film Adaptation 3 Credits

Provides an in-depth study of intertextual influence, as film enters into "dialogue" with various literary forms. Through close analysis of selected films and various forms of literature-including novels, graphic novels, short stories, plays, poetry, and journalism-students will study the aesthetic specificity of both film and literary genres and will analyze the transformative qualities at play when a work is adapted from page or stage to screen. Note: This course is cross-listed as ENG 384. Students may not get credit for both ENG 384 and FMS 384.

FMS 484 Seminar in Cinema Studies 3 Credits

Provides an in-depth study of areas central to discussion and debate in the field of cinema studies (such as film violence, cinema censorship, feminism and film, post-colonial cinema, African- American cinema, blaxploitation, The French New Wave, and Italian Neorealism, among others). Through close analysis of selected films and readings, students will examine the impact of specialized influential movements in film history and in film theory and criticism. Further, students will trace and evaluate the influence of selected film movements and issues upon both cinematic and critical practice. Note: This course is cross-listed as ENG 484. Students may not get credit for both ENG 484 and FMS 484.

FMS 490 Independent Study 1-4 Credits

FMS 490 Independent Study will allow Film and Media Studies minors to pursue specialized areas of study, research and/or creative work relevant to the field of Film and Media Studies in consultation and close collaboration with a Film and Media Studies faculty member.

FMS 491 Internship in Film and Media Studies 1-4 Credits

FMS 491 Internship in Film and Media Studies will provide approved juniors and seniors minoring in Film and Media Studies with the opportunity to gain practical experience through work in various outside film and media-related publications, businesses, organizations, and production companies.

Filmmaking, TV & Radio

Program Overview

Students majoring in Filmmaking, TV & Radio have the opportunity to participate in classes tailored especially to their interests. They learn the secrets behind successful production in small, hands-on classes in the Department of Communication and Journalism's state of the art digital film, television and radio studios. In addition to class projects, Internships and Co-ops, students gain valuable experience in producing and directing short films and radio and television programs, even as freshmen on 107.7, The Bronc - Rider's own radio station, or by participating in R.U.N., The Rider University Network, Rider's student run television network.

Curriculum Overview

Core classes in the digital media program include The Aesthetics of Filmmaking, Audio Production, Television Production, Broadcast Programming, Directing for Film and Television Field Production. Other courses include Broadcast Programming, Writing for Broadcast, Digital Filmmaking, and Documentary Film and Video. Filmmaking, TV & Radio students also have the opportunity to take courses in the Film and Media Studies minor.

Degree Offered

- B.A. in Filmmaking, TV & Radio

Courses and Descriptions

COM 102 Introduction to News Writing 3 Credits

Introduces students to routines of journalism, including reporting, writing and preparing content for print and web. Incorporates contemporary practices in multimedia journalism, including digital audio, video and photos, into traditional skills, with an emphasis on accuracy, clarity and professional style and voice. Class exercises are completed in a laboratory newsroom.

COM 103 Intro Comm Studies:theory&prac 3 Credits

Provides a foundation for the study of communication across the discipline. Open to freshmen only, it is designed to assist the first year student majoring in communication or journalism to gain a broad understanding of the scope and breadth of the field. Fundamental communication theories, principles, concepts, terms, and issues are introduced.

COM 104 Speech Communication 3 Credits

Examines basic communication principles and strategies of public speaking. Various genres of oral communication are studied, with an emphasis on extemporaneous and impromptu forms of delivery. Students research, prepare, and deliver speeches that are then used as the focal point for the discussion of effective speaking and listening. A number of speeches are videotaped. Students who received credit for COM 104S may not take this course.

COM 104S Intro to Speech Communication 3 Credits

As part of the EOP program, this course is designed to improve the speaking and language skills of new college students. Through directed practice, students have the opportunity to develop poise and confidence in oral communication, as well as competence in analyzing and synthesizing messages. Emphasis is placed on development, organization, and delivery of speeches. To receive credit, a grade of "C" or higher must be earned. Students who receive credit for COM 104S may not take COM 104.

COM 105 Communication, Culture and Media 3 Credits

Provides a detailed investigation and analysis into the nature, history, scope, adequacy, and limitations of mass communication and examines the reciprocal influence of the media on culture and society.

COM 106 Writing for the Comm Professns 3 Credits

Provides students with written communication writing strategies and tools. Applies theory and practice in communication to targeted audiences. Emphasizes the critical role writing plays in the communication workplace and provides an opportunity to evaluate and respond to real-life writing samples and situations.

COM 107 Writing for the Media 3 Credits

Introduces students to interviewing and persuasive writing techniques for print and electronic public relations and advertising formats. Teaches techniques for creating effective digital audio-visual aids and working with digital audio and video.

COM 131 Fundamentals of Video Production 3 Credits

Introduces students to basic video production theories, techniques, and applications. Students will gain competency in a number of video production areas including: production planning, camera operations, lighting, sound, and digital non-linear editing. Individual and group production exercises will involve planning and executing video productions in both studio and non-studio settings. This class is designed to prepare students from any major to effectively create, produce, shoot, and edit basic video production assignments including public service announcements, video news releases, educational/instructional videos, and marketing/promotional spots.

COM 201 Communication Theory 3 Credits

Explores selected theories, models, and research methods in human communication, the dynamics of the communication process in various settings, and the role of communication in human interaction.

COM 204 Advanced Speech Communication 3 Credits

Provides students with the opportunity to further their study and practice of various types of speech communication. Moving beyond an introductory perspective, this course focuses on the development of critical, analytical, and pragmatic aspects of speech. The focus is divided between the discussion of theoretical models and a demonstrated competence of that material.

Prerequisite(s): COM 104 or COM 290.

COM 205 Theories of Persuasion 3 Credits

Analyzes the motivations that lead individuals and audiences to beliefs and actions and the techniques of achieving objectives through persuasion. Attention, interest, empathy, ethos, fear, and techniques of speakers, and those who use persuasion professionally are studied.

COM 207 Social Media and Social Change 3 Credits

Introduces students to Web/ social media tools and information distribution networks that have enabled people to mobilize new types of collective action, inform publics and advocate positions. Community production and sharing of knowledge (Wikipedia), culture (YouTube, Flickr, the blogosphere), and political organizing (colorofchange.org) are current manifestations of social changes that are continuing to bloom in the 21st century. In this course, Rider University students will become literate in active Web and social media participation with a focus on engaging with current social, political and cultural issues.

Prerequisite(s): COM 201 or COM 205.

COM 210 News Reporting and Writing 3 Credits

Develops skills in hard-news reporting. Employs off-campus reporting assignments to refine information-gathering techniques such as interviewing, observation, and use of government documents and other contextual materials. Includes reporting and writing about police news, state and local government, the criminal justice system, science, business, and sports.

Prerequisite(s): COM 102.

COM 211 Copy Editing 3 Credits

Teaches all phases of copy editing for news and public relations: marking of copy, online editing, fact checking, building and shaping news and feature stories, applying mechanical style, building an ear for graceful English, and safeguarding against legal and ethical problems. Provides comprehensive review of grammar, spelling and punctuation, along with intensive practice in writing headlines and captions and editing wire copy.

Prerequisite(s): COM 102.

COM 212 Publication Design 3 Credits

Explains theories, principles, and techniques of print media layout and design. Provides an understanding of the use of type and art as design elements in various publication formats, such as newspapers, newsletters, advertisements and brochures. Directs students to apply these concepts to the creation of published materials using Adobe Creative Suite.

COM 215 Computer Assisted Reporting 3 Credits

Develops advanced reporting techniques for researching and writing in-depth news stories and investigative articles. Uses state-of-the-art computer-assisted reporting methods including finding and mining data bases on the Internet, creating spreadsheets to analyze data, and employing data base manager software to sort and summarize information in government documents and other specialized resources. Focuses on conceptualizing of story ideas, planning major projects, gathering information by means of data bases, participant-observation, interviews, and analysis of public documents. Emphasizes organizing large quantities of material and presenting it in a meaningful context, including with information graphics.

Prerequisite(s): COM 102 or permission of instructor.

COM 220 Voice and Articulation 3 Credits

Increases the student's knowledge of the vocal elements of oral communication and improves use of voice and articulation. Introduces anatomy and physiology for enhanced vocal production. Analyzes volume, rate, pitch, quality, phrasing, stress, and inflection. Presents the International Phonetic Alphabet as a means of developing correct articulation and pronunciation. Uses classroom exercises and tape recording for feedback and learning.

COM 230 Radio & TV Communication 3 Credits

Examines the field of electronic communication and its role in society. Scrutinizes the history, technology, structure, and regulation of broadcasting including issues, trends, and the impact of new communication technologies. Introduces basic principles of effective communication in broadcast writing and producing.

COM 233 Writing for Broadcast 3 Credits

Introduces diverse and highly structured writing styles and formats used in writing for broadcast. With focus on effective and creative writing using broadcast style, students will be exposed to the fundamentals of writing dramatic and non-dramatic material for radio and television including station IDs and liners, public service announcements and commercials, news and public affairs programs, and short dramatic and documentary scripts. Through lectures, case discussions, in-class assignments, and critiques, emphasis will be on the practical application of basic rules and conventions common to broadcast writing from copy preparation to on-air delivery.

COM 234 Audio Production 3 Credits

Provides a laboratory study of audio production techniques, and performance. Introduces the fundamental properties of sound as applied in modern audio production at radio and television stations, sound studios, and production houses. Students conduct lab exercises in editing, mixing, and digital recording using ProTools. Students perform a variety of genres including news, commercials, dramas, and promos.

COM 235 Digital Filmmaking 3 Credits

This course will provide students with an introduction to basic narrative film production including theories, techniques and applications. Students will gain competency in a number of film production areas including: idea generation and scripting, production planning, cinematography, lighting, sound and digital editing. Working as individuals and in groups, students will develop and produce short narrative film projects. Students will continue to develop proficiency and mastery of the use of specialized vocabulary of the film industry as well as the ability to analyze film and its narrative structure. In addition students will break down the "narrative" focusing on genre conventions and subtext. Students will additionally examine the relevance of film to society while developing proficiency and mastery in the study of how to create film projects.

COM 236 The Aesthetics of Filmmaking 3 Credits

Introduces students to basic terminology, techniques, theories and criticism commonly used in digital filmmaking. Through lecture, class discussion and screenings, students will learn how film theory, criticism and aesthetics impact the filmmaking process. Students will review and analyze films of different genres; the different approaches adopted by filmmakers; and the various elements and techniques that contribute to the creation of powerful and effective films. Aesthetic elements such as production design, mise en scene, cinematography, lighting, editing, sound design and script development will be introduced and practiced.

COM 240 Public Relations 3 Credits

Introduces current theories and practices of public relations, with emphasis on facilitating two-way communication with various publics. Explores approaches to public relations problems by critically analyzing case studies and applying theories and techniques to realistic situations.

COM 251 Interpersonal Communication 3 Credits

Focuses on the study of various communication concepts and theories and the development of interpersonal skills and sensitivities. More specifically, students will participate in lectures, exercises, and projects while exploring the role and function of relationships in their professional, social, and personal lives.

COM 252 Intercultural Communication 1.5-3 Credits

Develops intercultural communication competence through an awareness and understanding of diverse cultures and their impact on communication. It will introduce students to those general factors that influence communication with people from diverse cultures both internationally and within the United States, and offer a blend of skill development, communication theory, and hands-on application. Note: This course is crosslisted as GLS 252. Students may not get credit for both COM 252 and GLS 252.

COM 253 Organizational Communication 3 Credits

Focuses on the ongoing communication processes in organizations. This course examines how and why organizations develop policies and procedures that both encourage and yet constrain creativity and autonomy in employees. It also introduces various management skills to balance the dynamic in organizations. Finally, the course introduces students to various communication technologies that enable communication processes in organizations. Students will also have opportunities to participate in creating organizational dynamics through role-playing exercises, case studies, and other kinds of experiential learning.

COM 254 Intro to Health Communication 3 Credits

Health communication has been shown to have a positive impact on a number of facets of the medical visit, including patient outcomes, patient satisfaction, and job performance and satisfaction. This course will provide students with tools to implement health communication practices in a healthcare setting in order to improve these areas. In addition, health communication is particularly useful in cross-cultural situations, both in regard to the patient-provider relationship, when the ethnicities of the two parties may be different, and when cultural beliefs may impact a patient's medical wishes. Part of the tools for implementing health communication into the practice setting includes an understanding of the role that culture can play in healthcare and the development of strategies to provide optimal medical care while also respecting cultural intricacies.

COM 261 Web Design I 3 Credits

Introduces students to digital graphics, text, audio and video for Web design using Adobe Creative Suite. Students will learn the basics of audio, video, graphic, and interactive software along with theories of design and perception that underlie effective presentation of digital messages.

COM 262 Graphic Imaging for Digital Media 3 Credits

Teaches students techniques for image development, and image preparation for various multimedia applications. Emphasis is placed on color calibration and palette issues, image manipulation, advanced image selection techniques, transparency and masking, multimedia authoring file formats, and dynamic image design. Students will be expected to participate in critiques of professional designs in order to learn to critically evaluate their work and their fellow students' work.

Prerequisite(s): COM 261 or permission of instructor.

COM 263 History and Principles of Graphic Design 3 Credits

Covers the history and principles of graphic design from analog art through the digital revolution. The elements and principles of design will be used to study stylistic progressions, artistic techniques, design innovations, and mechanical inventions. Material will be presented through a combination of illustrated lectures and discussions.

COM 264 Intro to Media Convergence 3 Credits

Introduces the ways that the merging of media industries and the intersection and integration of various media platforms and technologies impact our lives. While the primary focus will be on digital and mobile technologies and practices, the course will also cover the convergence of digital technologies in a wide range of media areas, including journalism, social media, television and entertainment. The course will offer students broad conceptual frameworks for thinking about how the emergence and evolution of digital as well as mobile communication technologies have changed the communication and journalism industries and how they are reshaping content. In addition, the course is intended to allow students to use different digital communication technologies.

COM 265 3D Graphic Animation 3 Credits

Provides students with an introduction to the basics of 3D graphic animation techniques including modeling, texturing, rendering, visual effects and animation. Through various projects the students will learn: to model characters, sets and props, how to apply textures and color to their models, and how to bring their creations to life using various animation techniques. In addition to the technical aspects of creating successful animation, the students will also learn the aesthetics of animation in regard to cinematography, art direction, lighting, character creation, prop creation, and set creation, dramatization and narrative.

COM 270 Sports Multimedia Reporting 3 Credits

COM 270 Sports Multimedia Reporting. Develops skills in hard-news sports reporting, game coverage, and the production of introductory multimedia and social media sports content. Employs out-of-the-classroom reporting assignments to refine information gathering techniques such as interviewing, observation, and use of documents and other contextual materials. Includes reporting and writing on sports games, teams, players, coaches, athletic issues/controversies, and the business of sports.

Prerequisite(s): COM 102. Introduction to News Writing.

COM 280 Issues in Event Planning 3 Credits

Offers students education in event planning, production, and supervision for varied professional applications. Emphasis will be placed on planning, budgeting, and organizing small and large events for educational, institutional, non-profit, and professional groups. Students will participate in the entire process of event planning, with specific experiences in applying communication theory to actual projects.

Prerequisite(s): COM 240 or MKT 200.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

COM 291 Documentary Film and Video 3 Credits

Surveys the history of documentary film, including reportorial, exploratory, persuasive, symphonic, compilational, reflexive, and fictional traditions through screenings, lectures, and readings. Provides practice in film criticism. Explores philosophical questions about the relationship between non-fiction films and videos and the reality they purport to record. Analyzes ethical problems of filmmaking.

COM 301 Communication Law 3 Credits

Critically examines the legal limits and privileges affecting freedom of expression, especially in publishing, advertising, film, telecasting, and cyberspace. Places particular emphasis on the historical and philosophical foundations of the freedoms and limitations of communication in the United States.

COM 302 Communication Ethics 3 Credits

Analyzes internal and external pressures on the communication professional including economic, cultural, social, and political pressures, assesses the philosophical and practical basis for responding to such pressures, evaluates contemporary media responses to these pressures, identifies those that are of laudable quality and why, and provides guidance as to how individuals and organizations can think and react ethically. Issues addressed include censorship, confidentiality, conflicts of interests, minority and ethnic groups, privacy, sensationalism, and self-criticism.

COM 312 Spe Topics in Jour Writing 3 Credits

Provides students with the opportunity to explore specialized topics in journalistic reporting and writing. Each course will focus on a specific area in the broad field of journalism. Examples include business reporting, health reporting, and sports reporting.

Prerequisite(s): COM 102 or COM 107.

COM 316 Feature Writing 3 Credits

Focuses on problems and requirements of newspaper, magazine, public relations, and free-lance nonfiction writing. Students write features designed for acceptance in print, broadcast and digital media and learn marketing techniques.

Prerequisite(s): COM 102 or COM 107, English writing concentration, or permission of instructor.

COM 318 Gender and Communication 3 Credits

Focuses on interactive relationships between gender and communication in contemporary American society. It connects theory and research with practice to explore multiple ways communication in families, schools, media, and society in general creates and perpetuates gender roles. It is designed to heighten students' awareness of how we enact socially created gender differences in public and private settings and how this affects success, satisfaction, and self-esteem. Note: This course is crosslisted as GND 318. Students may not get credit for both COM 318 and GND 318.

COM 322 Argumentation and Debate 3 Credits

Investigates the theory and practice of speech communication that seeks to persuade by inferential argumentation. Concentrates on theories, practices, and research in argumentation and debate, blended with speaking experience in analyzing and advocating controversial topics.

Prerequisite(s): COM 104 or COM 290.

COM 323 Oral Interpretation of Lit 3 Credits

Provides an orientation to the field of oral performance. Students select literary texts, adapt the material to the audience and prepare it for presentation. Emphasizes the development of voice, articulation, and kinesic behavior. Presentations to the class are critiqued.

Prerequisite(s): COM 104 or COM 290 or permission of instructor.

COM 328 Sitcoms and American Culture 3 Credits

Provides an overview to the unique and highly structured form of the American television situation comedy. The primary focus will be on history and development with in-depth study of situation comedy themes, characters, and settings. Through lectures, case discussions, in-class assignments, and class projects, students will examine the social and cultural meanings and implications of this incredibly popular and durable genre of programming.

COM 330 Documenting Cultures Thru Travel 3 Credits

Offers students, through travel and study, a unique opportunity to gain firsthand experience of a foreign culture and to learn how to record and document their experiences using multiple media, including print, audio, video, photography and/or the Web. While traveling, students will be required to attend lecture/discussion sessions, site tours, and other planned activities. This experience will be preceded and/or followed by additional academic work to be conducted on campus. Study topics may include aspects of the historical, social, economic, political and aesthetic cultural components appropriate to the location(s) to be visited. The travel component of the course will be scheduled to avoid conflict with normal semester offerings. No foreign language skills are required.

COM 331 Television Production 3 Credits

Explores the technological capabilities and limitations of the television medium in team productions using a range of styles and formats. Students learn principles of studio production, electronic field production, and electronic news gathering. Exercises include use of computer graphics, audio production, and non-linear video editing. Stresses electronic communication skills and aesthetic values in a professional production setting.

Prerequisite(s): COM 230.

COM 333 Broadcast Programming 3 Credits

Analyzes the theory, practice, structure, and function of broadcast programming. Examines the structure of the industry as it relates to entertainment, information, and the audience. Studies program categories, formats, genres, trends, consistency, accountability, and ratings as well as cable, satellites, and home video. Critical standards are developed by introducing humanistic and scientific modes of program analysis.

Prerequisite(s): COM 230.

COM 335 Television Field Production 3 Credits

Provides an in-depth study of advanced techniques in Field Production for television. Individual and group field production assignments will involve planning and executing single camera production in a non-studio setting. Previously developed video production skills will be refined, and students will gain increased competency and sophistication in all areas of field production including: production planning, camera operations, lighting, sound, and digital non-linear editing. Designed to prepare students to effectively function in the industry as a member of a professional field production team. In field situations, students create, produce, shoot, and edit documentaries.

Prerequisite(s): COM 331.

COM 337 Music Production for Mass Media 3 Credits

Offers students education in audio production techniques for music and other advanced audio material. Building on theory and practice introduced in the prerequisite, the class will instruct students in the theory behind acoustics and electronics as well as the digital tools and media. Those theoretical studies will be put to practice through exercises in recording music, making selections from music libraries, multi-track recording, arranging, editing, mixing and mastering. Students will begin to develop both an engineer's attention to audio detail and a musician's sense of artistry. Putting these skills to use, the students will produce complete musical works of varying musical styles, working both individually and in teams.

Prerequisite(s): COM 234.

COM 338 Writing for Broadcast II 3 Credits

Building on COM 233 Writing for Broadcast, this course provides a hands-on approach to more sophisticated reporting and interviewing techniques and writing formats used in long-form radio and television programs. This course will expose students to the following broadcast script writing areas: features, documentaries and reality programs. It will also cover writing for interview/talk show programs, music, comedy and variety programs. Students will also be exposed to writing for corporate, educational and children's programming. Students will have hands-on experiences writing, producing and editing news pieces and webcasts for student and area media outlets and web sites.

COM 341 Publicity Methods 3 Credits

Applies communication theory to writing and editorial processes and production techniques to create public relations materials; includes press releases, industrial publications, social media, trade publications, brochures, newsletters, stockholder reports, and multimedia platforms.

Prerequisite(s): COM 107, COM 240, or permission of instructor.

COM 347 Sports Media Relations 3 Credits

Critically examines the symbiotic relationship between the mass media and professional sports franchises and major college athletic programs. This course deals with the workings and processes behind executing the proper techniques of sports information and media relations, as well as an analysis of the culture of sports in modern society. Students will develop a practical focus on sports information and promotion, including the role of the sports information director and events promoter, with emphasis on advanced concepts of public relations, publicity and marketing.

Prerequisite(s): COM 240 or permission of instructor.

COM 348 Communication Research Methods 3 Credits

Introduces students to the research methods used to study communication problems and processes. Students will learn how researchers plan and design research studies, explore the methodological considerations of both qualitative and quantitative methods, and have an opportunity to gain hands-on experience in conducting research on communication-related issues.

Prerequisite(s): COM 105.

COM 350 Team & Group Communication 3 Credits

Examines the communication process as it relates to the small group. Theoretical constructs including motivation, group climate, attraction, leadership, decision making, problem solving and roles are analyzed. Utilizes group experience to study and evaluate the dynamics and effectiveness of interpersonal systems.

COM 352 Chinese and American Intercultural Commu 3 Credits

Instructs students about Chinese culture and communication. Culture impacts communication practices and styles in significant and subtle ways. Through readings, lectures, discussions, and first-hand interactions with Chinese international students, the students of this course will gain both conceptual and practical understanding of major communication differences between the two cultures, and become a more skilled intercultural communicator. Note: This course is crosslisted as GLS 352. Students may not get credit for both COM 352 and GLS 352.

COM 353 Nonverbal Communication 3 Credits

Investigates studies in and theories of nonverbal communication. Lectures and experiential activities explore the effect of status, culture, and gender upon kinesics, physical characteristics, proxemics, tactile communication, paralanguages, artifacts, and environmental factors.

Prerequisite(s): COM 104 or COM 290 or permission of instructor.

COM 360 Adv Publicatn Design & Present 3 Credits

Builds on elementary knowledge of graphic design to teach the principles of advanced layout, and computer graphics. Introduces students to industry standard drawing software and builds on their knowledge of layout software gained in the prerequisite course. Provides an understanding of the use of logos, infographics and magazine layout, and of the theoretical bases of color for print production.

Prerequisite(s): COM 212.

COM 361 Photography 3 Credits

Using digital SLR cameras, introduces students to professional methods of shooting varied subjects while applying a range of compositions and styles. Using Photoshop, students edit images for publication in print and on the Internet. Hands-on coursework is grounded in theory, history, aesthetics, and ethics. Some cameras are available for loan from the University.

Prerequisite(s): permission of instructor.

COM 363 Converging Digital Media 3 Credits

Examines the digital technologies that make up the new world of digital convergence. The course will examine the effects of digital media convergence on social life, ethics, industry, and local and global communities through a variety of theories and paradigms. This course will also help students develop necessary digital media production skills and use them critically to solve media development problems.

COM 364 Web Design II 3 Credits

Equips students with the theories and practical techniques required to produce effective digital text, graphics, and animations for the Web. Discusses theories behind the use of these media in terms of effective communication and interaction. Introduces students to different computer platforms and requirements for cross-platform media.

Prerequisite(s): COM 261 or permission of instructor.

COM 365 Graphic Animation 3 Credits

Offers students education in graphic animation theories, animation development techniques, and animation preparation for various multimedia applications. Emphasis is placed on the design principles in animated communication and animation techniques. The course covers the integration of static images in animation, graphic animation techniques, animation compression, animation rendering, input/output file formats, and animation delivery. The primary software for this course is Adobe Photoshop and Macmedia Flash. Students will be expected to participate in critiques of professional animation designs in order to learn to evaluate critically their own work and their fellow students' work.

Prerequisite(s): COM 262 or permission of instructor.

COM 366 Project Management in Graphic Design 3 Credits

Explores the creative process of graphic design while developing an understanding of the methods employed in problem solving in the industry standard design software packages. Students learn how to create a hierarchy of information through the ordering of elements into a comprehensive visual unity. They consider the relationship between content and page size, proportion, grid and margins. Students learn about typography as a design element and how it works with other visual elements in design. In order to develop an understanding of the project-planning process for either printer or Web projects, students will develop and present a series of projects that will build on one another to develop their "visual voice." Students will be evaluated on their ability to apply course material to the projects to create professional-quality work; their ability to apply exchange ideas and accept and apply constructive criticism; and on their participation in class discussions, critiques and presentations.

Prerequisite(s): COM 262, COM 360.

COM 367 3D Graphic Animation II 3 Credits

Continue to learn the techniques of 3D computer animation including modeling, texturing, rendering, visual effects and animation. In addition to the technical aspects of creating successful 3D animation the students will also learn the aesthetics of animation in regard to cinematography, art direction, lighting, character creation, prop creation, and set creation.

Prerequisite(s): COM 265.

COM 370 Sports Television and Field Production 3 Credits

Provides an in-depth study of advanced techniques in sports field production for television. Individual and group field production assignments will involve planning and executing single camera production in a sports setting. Previously developed video production skills will be refined, and students will gain increased competency and sophistication in all areas of sports field production including: production planning, camera operations, lighting, sound, and digital non-linear editing. Designed to prepare students to effectively function in the industry as a member of a professional field production team. In field situations, students create, produce, shoot, and edit sports content.

Prerequisite(s): COM 131.

COM 371 Sports Feature Writing 3 Credits

Focuses on developing reporting and writing skills for newspaper, magazine, public relations, and free-lance nonfiction sports writing. Students will study published examples of outstanding sports feature writing, and write their own sports feature articles with social media and multimedia components. Instead of traditional game coverage, this course focuses on covering sports personalities, issues and themes.

Prerequisite(s): COM 102, COM 270.

COM 380 Television Production Practicum 3 Credits

Provides a workshop dedicated to the planning and creation of professional caliber television content for the campus television network and beyond. This course will provide an opportunity for students to develop writing, graphic, audio, video design and production skills in an experiential setting. Students will create materials to be used by the Rider University Network and for broadcast, cable and Internet distribution. Students can be involved in any and all phases of creating content from project conception through implementation. Students will gain valuable experience with, a greater appreciation for, and increased competency in creating professional media content. This class will also prepare students to more effectively function in the communication industry as an effective member of a professional production team. Since topics will vary by semester and instructor, this course may be repeated once.

Prerequisite(s): permission of instructor.

COM 390 Communication and Society 3 Credits

Examines in a topical manner the influence of communication upon significant issues and movements affecting people and society. Investigates interpersonal and mass media factors as they relate to a major issue such as changing sex roles, radicalism, racism, evangelism, election campaigns, and technology. May be taken more than once with different emphasis.

COM 391 Communication Criticism 3 Credits

Investigates and analyzes various methods of communication criticism and their applications to the understanding and evaluation of public and media discourses. Introduces theories and perspectives to assist in the analysis of those discourses. Methods include Aristotelean, Burkean, and ideological criticism.

COM 392 Media History: Personalities and Trend 3 Credits

Presents in a topical manner the history of the media from various perspectives, seeking to place the material into a meaningful economic, cultural, political, and/or social context. Different issues and related individuals are examined, such as the golden age of radio, motion picture economics, and media empire builders, with a view toward understanding their significant impact on the development and functioning of the media today. This course may be taken more than once with a different emphasis.

COM 393 International Communication 3 Credits

Examines mass media systems and their influence on international communication. Emphasizes media systems of major political powers such as Russia, China, the European community, the United States, and geo-political centers such as Africa, Asia, the Middle East, and Latin America. Using a seminar format, the course explores how a nation's mass media reflect its socio-political environment and national values. Focuses on the international images constructed by the mass media. Note: This course is crosslisted as GLS 393. Students may not get credit for both COM 393 and GLS 393.

COM 399 The Co-Operative Experience 3-12 Credits

This course provides a significant work experience to support the professional development of the student and complement theoretical and classroom learning. Students will be assessed based on measures as defined in a placement contract mutually agreed upon by the sponsoring faculty member, the organization representative of the placement site, and the student. Approximately 360 hours of work will be required as students work typically four days per week over at least eight weeks. The proposed placement contract requires departmental approval and the approval of the appropriate office of the dean. It is expected that the Co-op program consume the student's academic load for the semester. Final placement will be determined by the organization where the student will work. Rider University does not guarantee that every student applying for a co-op will earn a co-op placement. Contact the appropriate department for additional information. Prerequisite(s): junior standing and 2.75 GPA at the time of registration; Pass/fail.

Corequisite(s): IND 398 The Co-operative Experience Seminar, IND 398 and (dept) 399 combined cannot exceed 15 credits.

COM 400 Senior Seminar Communication 3 Credits

Provides students with the opportunity to explore critical issues in communication and journalism in a dynamic and engaging context. Students conceptualize problems, develop hypotheses, review literature, design appropriate techniques of inquiry, conduct their research, and present their findings orally to the seminar and in writing to the instructor. Senior journalism and communication majors only.

COM 402 Directing for Film 3 Credits

This course approaches directing both creatively and critically, and examines the role and importance of the director to the filmmaking process. The transformation of the written script into a film is explored through readings, viewing and analyzing the films of accomplished directors. Lectures and exercises illustrated with film clips and readings emphasize plot development, script analysis, developing storyboards and shot lists, rehearsal, blocking, collaborating with talent and production crew, and using the camera to effectively capture action and performance. Students will gain an effective understanding of the role of the director through the various stages of film production, and be provided the opportunity to demonstrate and cultivate his/her effectiveness as a director through individual and group assignments.

Prerequisite(s): COM 235 and COM 338.

COM 415 In-Depth Reporting 3 Credits

Utilizes advanced tools and techniques of contemporary in-depth reporting for print and multimedia. Covering multifaceted stories, students will learn how to do balanced multi-sourced field reporting and writing using primary and secondary sources including human sources, electronic documents and databases, both online and offline. Emphasis will be placed on writing stories that answer not only who, what, when and where questions but also the why, the how and the “so what?” questions. Students will also be exposed to some of the best investigative work of journalists past and present as models for analysis and discussion.

Prerequisite(s): COM 210.

COM 431 Adv TV Research & Production 3 Credits

Explores the theoretical and practical application of aesthetic technique in modern television/video production situations. While the prerequisite courses emphasized competency in equipment operations and basic production skills, this course moves to a higher platform by emphasizing concepts of production and how to apply them for effective communication. Thus this course places emphasis on advanced techniques: design and aesthetics as applied to enhance the overall video presentation as practiced in both the commercial and organizational communication arenas. In the current state of the art of video production, a mastery of aesthetic skills is necessary for the effective expression of ideas in optimal fashion and for a variety of audiences. Students will be exposed to as many techniques as practical through class discussion (including heavy participation by the student), individual and group lab activities and contact when possible with current practitioners and equipment. As most television production is done for a client, that process will form the basis for much of the course discussion and activities including projects.

COM 434 Advanced Radio Production 3 Credits

Provides in-depth study of advanced techniques in audio recording and radio programming and production. Individual and group production of short and long-form radio projects including: promotional spots, features, music programming, and news. Students will be involved in all phases of programming and production for radio including: project conception, development, management, and implementation. Selected student projects will air on the student radio station, 107.7 The Bronx.

Prerequisite(s): COM 234.

COM 435 Advanced Digital Filmmaking 3 Credits

This is an intensive hands-on course in advanced digital filmmaking. Students will gain experience with and proficiencies in a number of filmmaking areas including: creativity, production planning, aesthetics, scripting, script breakdown, camera movement, selecting and directing talent, creating scenes and sequences, visualizing action, establishing mood and conflict, as well as advanced lighting, sound and digital editing techniques. The students' use of high definition digital imaging systems as a medium for narrative cinematography will be developed and refined. In addition, students will explore how filmmaking techniques and technology can impact the visual story telling process. While often working cooperatively in groups, modeling the interdependent structure of film crews today, the creative and leadership role of the director in the contemporary film industry will be emphasized. Throughout the class, there will be an important integration of theory and practice which will enable students to produce meaningful film projects that will not only be technically effective, but strong in content and context as well.

COM 440 Cases & Campaigns in PR 3 Credits

Critically analyzes public relations case problems in industry, labor, education, government, social welfare, and trade associations. Emphasizes problem solving through the use of communication theories, public relations techniques, creative thinking, and the development of professional goals and standards. Employs realistic simulation exercises and actual case studies to develop and critique students' ability to demonstrate this knowledge in professional situations.

Prerequisite(s): COM 341 or permission of instructor.

COM 452 Seminar in Communication Studies 3 Credits

Offers an in-depth investigation of relational communication. Students explore the many complexities involved in human interaction and interpersonal dynamics. Social and psychological implications of various communicative relationships ranging from cross-gender communication to dysfunctional family systems to intercultural interactions are included.

Prerequisite(s): COM 348, COM 350, or permission of instructor.

COM 460 Web Design III 3 Credits

Builds on previous courses to refine students' understanding of theories and procedures of digital media development. Further develops Web site creation and project management theories. Students develop advanced Web creation techniques, including responsible site production.

Prerequisite(s): COM 364.

COM 462 Advanced Graphic Design and Portfolio 3 Credits

Explores the processes of graphic design by creating independent and creative solutions to a series of design problems. Students expand their proficiency in all aspects of the design process, including creative brainstorming, conceptualizing, critical thinking and presentation. Students take a design project to both print and digital formats using Photoshop, Illustrator, and InDesign. Students develop and present a balanced portfolio as the culmination of their experience in the course.

Prerequisite(s): ART 103, ART 105, COM 262, and COM 360.

COM 470 Live Sports Reporting Capstone 3 Credits

Focuses on student production of live, professional-level sports media content. Students will combine reporting, writing, social media and multimedia from live sporting events. Live-coverage will include Rider University teams and regional or professional sporting events. The course is open to senior Sports Media Majors, or with the permission of the instructor.

Prerequisite(s): COM 370, COM 371.

COM 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

COM 491 Internship in Communication 1-4 Credits

Places qualified students in a professional area related directly to their communication training. Students may intern in a communication position with a corporation, small business, media outlet, public relations agency, non-profit organization, political party, sports organization, or other similar organizations. A minimum of 50 hours of internship per credit is required. Written reports, a final project, and supervisor evaluations are used to analyze and evaluate the experience. For students majoring in the Department of Communication and Journalism only, primarily juniors and seniors. No more than two internships are permitted for each student; exceptions may be made. The deadline for registration is the first Friday of the semester.

Prerequisite(s): 3.2 GPA and permission of instructor.

Finance Minor for Non-business Majors

Program Overview

The finance minor is designed to meet the needs of students who have a variety of career goals. For many types of jobs, it is essential that one understands the process of financial decision-making and the environment in which those decisions take place. To provide this understanding, the minor program consists of a well-rounded course of study in principles in macroeconomics, personal financial planning, management, entrepreneurial finance and other related courses.

Minor Offered

- Minor in Finance

Program Website: Finance (<http://www.rider.edu/finance>)

Associated Department/College: College of Business Administration

Related Programs

- Accounting (p. 12)
- Economics (p. 26)
- Entrepreneurial studies (p. 29)

Requirements for the Minor

(Available to all non-business majors)

(18 credits)

ACC 210	Introduction to Accounting	3
ECO 201	Principles of Microeconomics	3
FIN 220	Introduction to Finance	3
Select three of the following:		9
FIN 305	Personal Financial Planning	
FIN 307	Financial Markets & Institut	
FIN 308	International Finance	
FIN 309	Intermediate Corporate Finance	
FIN 312	Investments	
FIN 315	Financial Modeling	
FIN 330	Corporate Cash Management	

FIN 350	Entrepreneurial Finance	
FIN 360	Fixed Income and Derivatives	
FIN 412	Investment Analysis	
Total Credits		18

Students must achieve a minimum 2.0 GPA in the minor with no course grade below a "C-."

Courses and Descriptions

FIN 200 Managing Your Money 3 Credits

An introduction to the analysis of a wide range of financial decisions which individuals encounter over their careers and lifetime. Topics include financial goals, tax planning, home ownership versus renting, consumer credit, money management and investments, and managing risk with insurance. This course is open to all Rider students, and it counts as a free elective or a business elective. It cannot be used as finance elective.

FIN 220 Introduction to Finance 3 Credits

An introduction to the environment, concepts, and techniques of financial management. Topics include forms of business organization, taxes, analysis of financial performance, financial planning, financial markets and interest rates, time value of money, bond and stock valuation, risk and return, capital budgeting, cost of capital, and international financial management.

Prerequisite(s): ACC 210 and ECO 201.

FIN 305 Personal Financial Planning 3 Credits

This course focuses on practical issues and problems involving personal financial budgeting, use of credit, selection of banking services, insurance needs, real estate, investments, tax planning, and retirement planning. An important objective of the course is to provide the student with the tools that are utilized in making personal financial decisions and how to apply those tools for a variety of financial needs.

Prerequisite(s): FIN 220.

FIN 307 Financial Markets & Institut 3 Credits

This course provides an introduction to the organization and behavior of financial markets and institutions in the economy. The factors determining security prices and interest rates in the money and capital markets are analyzed. An overview of all major financial institutions is presented. In addition, market returns, the regulatory environment, and monetary policy are examined.

Prerequisite(s): ECO 200 and junior standing.

FIN 308 International Finance 3 Credits

Financial management in the international environment. Topics include balance of payments, foreign exchange markets, arbitrage, hedging of currency risk, country risk management, and the evaluation of foreign investment opportunities.

Prerequisite(s): FIN 220.

FIN 309 Intermediate Corporate Finance 3 Credits

This course builds on and extends the concepts of financial management learned in FIN 220. The course examines long-term corporate financing and investment decisions and how those decisions interface with each other. Topics covered include: cost of capital, financial planning and analysis, capital budgeting, capital structure and dividend policy.

Prerequisite(s): FIN 220.

FIN 312 Investments 3 Credits

The fundamentals of investing in stocks, bonds, and other negotiable instruments are covered. Major topics include trading on securities markets, mutual funds, international investing, margin accounts, short sales, determinants of securities prices, and investment risks. Stock options, financial futures, convertible securities, and implications of taxes on investment decisions are also discussed.

Prerequisite(s): FIN 220.

FIN 315 Financial Modeling 3 Credits

Provides instruction in computer use beyond what is available in other finance courses. Topics include more sophisticated applications of computers in financial management, investments, and other areas of finance and business. Students work on cases and projects which require more advanced usage of spreadsheets and other software and databases.

Prerequisite(s): CIS 185 and FIN 220.

FIN 330 Corporate Cash Management 3 Credits

This course is designed for business students seeking an understanding of modern principles and techniques for corporate treasury management. The course material is useful for finance, accounting, and banking professionals or small business owners. Topics include analysis of liquidity and solvency, credit and accounts receivable management, cash collection and disbursement systems, short-term investment and borrowing, management of treasury information and technology, multi-national cash management, and other related topics.

Prerequisite(s): FIN 220.

FIN 340 Risk Management 3 Credits

This course examines the risk management process as applied to the firm as a whole. It integrates the management of all risks facing the firm: strategic, financial, hazard, and operational. Techniques for identifying risk, measuring and analyzing it, and selecting an appropriate treatment will be explored.

Prerequisite(s): FIN 220.

FIN 350 Entrepreneurial Finance 3 Credits

This course covers the techniques for acquiring financial resources as a firm advances through successive business stages: seed, start-up, struggling, growing, and stable. In addition, it examines recent trends in credit markets and the latest financial innovations as they impact the process of financing the venture's growth.

Prerequisite(s): FIN 220.

FIN 360 Fixed Income and Derivatives 3 Credits

This course centers on the quantitative portion of the Chartered Financial Analyst (CFA) level 1 curriculum, which includes materials on fixed-income risk and return, fundamentals of risk analysis, derivative instruments and risk management applications of option strategies. The goal is to help students prepare for the exam, as well as introduce them to a variety of topics in finance.

Prerequisite(s): FIN 312.

FIN 370 Financial Analysis and Ethics 3 Credits

This course covers the topics of financial reporting and analysis and related ethical issues. The course would benefit students interested in augmenting their ability to understand, analyze and apply the information in financial statements. It provides essential knowledge for students seeking either the Certified Management Accountant (CMA) or Chartered Financial Analyst (CFA) certifications. Specifically, the course covers the Ethics and Professional Standards of the CFA curriculum, and materials on financial reporting quality and financial statement analysis. Course goals are to help students prepare for the certification exams, as well as introduce all interested students to a variety of topics in financial analysis and ethics.

Prerequisite(s): FIN 312 or POI.

FIN 380 Real Estate 3 Credits

Real estate finance and related subjects in real estate are examined.

Topics include measuring cash flows and taxes, valuation methods for real estate investment decisions, location and value in real estate, home ownership, legal matters, and financing methods and techniques.

Prerequisite(s): FIN 220.

FIN 399 The Co-Operative Experience 6 Credits

The co-op program provides students with an opportunity to work full-time in a company and apply what they have learned in their finance and other business classes. It also enhances students' employment opportunities since many employers use a co-op program as a first step before they hire full-time employees. Eligible students include finance majors with at least junior status, a minimum overall GPA of 3.0, and a minimum GPA of 3.0 in any finance coursework completed prior to the submission of the co-op application. Co-op credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): FIN 220.

FIN 412 Investment Analysis 3 Credits

Real-world application of the concepts and techniques of investment analysis and portfolio theory introduced in FIN 312. Students interact with and make recommendations to professional portfolio managers. Topics include analysis and forecasts of business conditions, market interest rates, international opportunities, and corporate profits. Emphasis is placed on the valuation of securities, stock selection, investment timing, technical analysis, and management of portfolio risk with options, futures, and other tools.

Prerequisite(s): FIN 312 or permission of instructor.

FIN 469 Special Topics in Finance 3 Credits

This course is occasionally offered, with the topics and prerequisites set by the finance program.

FIN 490 Independent Research and Study 3 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation. This course can be used as a business or free elective, but with prior approval it can also be used as finance elective.

FIN 491 Finance Internship 1-3 Credits

The internship offers qualified junior and senior finance majors supervised employment with participating companies. The internship may be taken during the fall or spring semester or during the summer session. Students are evaluated periodically by senior staff members of the participating firms and are required to complete a term paper that will be reviewed by the major's internship director. Internship credits can be applied toward business or free elective requirements but not toward finance elective requirements for majors. Grading is on a pass/fail basis.

Prerequisite(s): permission of instructor.

French

Program Overview

Majoring in a foreign language such as French allows students to pursue careers in business, management, law, government, teaching, translation, publishing, communications, and travel.

French students at Rider acquire an international perspective and a unique intercultural sensitivity. Advanced foreign language skills combined with intercultural expertise increase the employment prospects of our students in the global market place of the 21st century.

A major or minor in French offers students the opportunity to receive a practical grounding in the French language and culture through a challenging curriculum which may include study abroad. In addition, our language, literature, film and culture courses prepare students to understand cultural diversity abroad and at home, to appreciate their own language and culture, and to gain global awareness. An individual fluent in another language acquires insight into the world in which we live. Advanced foreign language skills, combined with an international perspective and intercultural expertise, position our students for productive careers in the global and multicultural marketplaces of the 21st century. Faculty engagement in research and teaching excellence combines with our unique "accent on the individual" through advisement and co-curricular opportunities to create a challenging yet supportive atmosphere in which students can realize their potential.

A major or minor in French will also complement many degree programs in business, education, music and the liberal arts.

Students have access to a state-of-the-art Foreign Language Media Center with 25 computer work stations with Internet access for self-paced work and classroom instruction including interactive audio, video and text-based materials.

Curriculum Overview

Classes in the French major include introduction to French literature, French composition and translation, French for Business and the professions, French culture and French phonetics and conversation. Students also study literature and culture and liberal arts. Students are strongly encouraged to spend one semester abroad.

French students may also minor in German, Spanish, Italian and Chinese.

Honors Programs in Languages, Literatures and Cultures

The department faculty will identify prospective honors students at the earliest possible moment and offer them challenges and encouragement to develop to their highest potential. A student who has a 3.25 cumulative average and a 3.5 in the major may be invited by the department, upon recommendation of a faculty member, to become a candidate for the 3-

credit honors thesis or capstone project. Details of the thesis or capstone project will be arranged to accommodate the interests of the individual student.

The thesis/capstone project is completed during the senior year. It represents the culmination of a student's academic experience, and is an irreplaceable learning experience for the development of research, writing and critical thinking skills for graduate school admissions and success, as well as work in numerous careers. Students who successfully complete the thesis or capstone project and retain the required cumulative and major grade point average will graduate with honors.

Notes:

- Foreign Language core requirements are included in the major.
- 24 Hours beyond French IV and 12 semester hours in collateral Liberal Arts courses.
- Some of the requirements may be met by Study Abroad. Students are strongly encouraged to spend at least one semester abroad.

Courses and Descriptions

FRE 100 French I 3 Credits

Conversational French is taught through basic vocabulary and grammar building. Students will enjoy an immersion-style method emphasizing real-life situations and vocabulary in authentic cultural context, through an interactive textbook, videos, on-line resources, and oral/aural skill building using the technology in the Foreign Language Media Center to enhance learning.

Prerequisite(s): Placement test if French has been studied elsewhere.

FRE 101 French II 3 Credits

Building on learning in French I, students will begin to converse using more complicated grammatical structures within immersion-style classroom interactions. While the focus is still on conversation and aural skill building, composition skills receive greater emphasis. Students will enjoy an interactive textbook, Internet usage, and authentic videos shot on location in France.

Prerequisite(s): FRE 100 or placement test.

FRE 200 French III 3 Credits

This course builds on linguistic skills previously acquired through an emphasis on conversation and oral comprehension, and through vocabulary building. Grammar study is continued at a more advanced level, and students begin to read short passages focusing mainly on francophone culture and civilization. Film clips, Internet resources, and other computer-aided learning tools are used to create a dynamic immersion-style learning experience.

Prerequisite(s): FRE 101 or placement test.

FRE 201 French IV 3 Credits

While continuing the emphasis on aural/oral production and grammar and vocabulary building, short passages of greater complexity taken from literary texts, newspapers, and magazines will become the focus of conversation/composition activities. Technological resources will continue to enhance the immersion-style learning experience consistent with a course in advanced French. Successful completion of this course, or its equivalent, serves as a prerequisite for French courses at the 300 and 400 level.

Prerequisite(s): FRE 200 or placement test.

FRE 300 French Composition/Translation 3 Credits

An in-depth study of style, shades of meaning, and correctness of expression. Translation of business/professional/scientific/political texts will receive emphasis, and students will continue to perfect their writing skills, and review and improve advanced grammatical structures.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 301 French for Business 3 Credits

The fundamentals needed to survive in the French professional and business world are taught. Students will continue to perfect oral/written/aural skills while learning about the cultural climate within which these skills will be used. Students will learn how to prepare effective business/professional correspondence and, through role-playing activities, will use their knowledge in such real-life situations as interviewing, telephone conversations, and business meetings.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 305 An Intro to French Literature 3 Credits

A chronological overview of the evolution of French literature from the chansons de geste into the 20th century. Study and interpretation of selected works, authors or literary movements through the Renaissance, the classical period, Enlightenment, romanticism, realism, naturalism to representative works by authors of our century from Proust to existentialism, the nouveau Roman, theatre absurde and beyond. Required for majors.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 311 French Culture 3 Credits

A study of modern France and French value orientations as they are rooted in tradition and history and continue to shape everyday life as well as institutions, social organizations, artistic expression, education, attitudes and human interaction. A comparative approach will examine the underlying differences between France and the United States. Classes are in English.

FRE 320 French Phonetics and Conversation 3 Credits

This course is an introduction to French phonetics and is designed to help students further develop their skills in speaking French accurately and fluently. The course requires students to learn basic linguistic symbols and the phonetic alphabet as a theoretical step toward improving articulation and pronunciation. Moreover, special emphasis will be placed on the development of vocabulary and of appropriate communication techniques to participate in discussions in French. The course will be a mix of lectures, class discussions, debates, face-to-face conversations, and role games requiring a strong active participation. Counts toward major and minor requirements.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 422 Cultural Expression in French Film and Television 3 Credits

A systematic analysis of selected French films and television broadcasts will reveal cultural value orientations as they relate to love, family, community, leisure, work, social, and political organization. A comparative approach will stress the underlying cultural differences between France and the United States.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 425 Portrait of the Hero in French Fiction 3 Credits

This course deals with modern French fiction and its depiction of the role of the hero as a figure who gradually loses control over his fate (Stendhal, Balzac) and is changed into someone who struggles against ever increasing odds, only to be finally vanquished (Flaubert). The main character may find fulfillment in recollections of the past (Proust), explore the moral parameters of existence (Gide, Camus) or become the incapacitated anti-hero of Beckett's novels.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above; exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 430 Mask & Reality in French Theat 3 Credits

A study of theater through the optic of a unifying theme: the mask and reality. The goal is to gain a greater appreciation of the art of dramatic illusion whereby actors, while wearing the masks of the characters they play, allow us to examine ourselves and reality in true, unmasked form. Playwrights to be studied will range from the classical theater of Racine and Corneille, through the modern avant-garde, existentialist and Theater of the Absurd works of such playwrights as Ionesco and Beckett.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 435 Self in French Prose & Poetry 3 Credits

Are we determining or pre-determined creatures? What is our essential nature? Is the quest for salvation justified? A study of the historical, political, and social realities in which the texts were composed will shed light on the concept of the self. Representative authors from the Renaissance to modern times will include: Montaigne, Descartes, Pascal, Montesquieu, Rousseau, Hugo, Baudelaire, Apollinaire, Sartre, Camus, Duras, Sarraute, Colette, de Beauvoir.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 440 A Quest for Identity: Francophone Lit 3 Credits

This course introduces the cultures of countries or regions where French is used either as the (or one of the) official language(s) or, in a less official capacity, by a segment of the population. In readings, discussions, songs, film viewings, and written assignments, students will experience the Francophone cultures of specific areas and the amazing diversity of the Francophone world. They will also explore the difficult relation of the Francophone countries with France. The course considers issues of social status, history, resistance, and identity. Counts toward major and minor requirements.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

FRE 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

FRE 491 Internship in Foreign Languages 1-4 Credits

A supervised work experience in an approved organization to gain knowledge of the importance and interrelationship of foreign languages and cultures in the workplace. Placements can be made in international governmental agencies, international trade associations, multinational corporations, social service agencies, and other appropriate workplace environments both in the United States and abroad. With permission of the supervisor and faculty advisor, a three-credit internship may be substituted for a collateral requirement as credit toward the major.

Prerequisite(s): students should have completed at least one 300-level course in the foreign language.

FRE 496 Special Studies 3 Credits

Offered as needed to complement the program in French. A seminar open to a variety of topics treating a particular author, period, genre or critical approach.

Prerequisite(s): FRE 201, placement test at 300-level or above, or FRE 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

Gender and Sexuality Studies

Program Overview

The minor in gender and sexuality studies allows students to explore the complex interactions among race, class, ethnicity, gender, and sexuality. Courses in gender and sexuality studies consider the current debates on key issues such as reproductive rights, domestic partnerships, health, communication and law. Students in this minor will benefit from furthering their understanding about how gender, race, class, ethnicity, and sexuality affect the way that individuals think and act.

Courses and Descriptions

GND 100 Introduction to Gender Studies 3 Credits

An introduction to the role of gender in human experience, examining the biological, historical, literary, artistic, and institutional manifestations of gender, and exploring the intersections of gender, sex, and sexuality.

GND 110 Race, Class and Gender in Contemporary American Society 3 Credits

This interdisciplinary course analyzes the ways in which race, class, gender and ethnic relationships shape the experience of all persons in this society. It examines the categories of race, class and gender as social constructs that have been historically developed and sustained by economic, social, political, and cultural factors.

GND 200 Introduction to Women's Studies 3 Credits

An interdisciplinary investigation of traditional and contemporary gender roles, and of women's status, identity, and potential. Required for minor.

GND 230 Women In Literature 3 Credits

A range of literary presentations of the female experience and of the conditions of women's lives is explored. These works are placed in historical and social contexts in order to see behind and beyond traditional literary conventions.

GND 245 Popular Constructions of Gender and Sexuality 3 Credits

This course takes an interdisciplinary approach to investigate the constructs that society creates and maintains with relation to sexuality and gender. As we are increasingly confronted with images of gender and sexuality, it becomes vital to interrogate the origins of these images from a variety of disciplinary perspectives in order to analyze and critique these constructs. Students will be introduced to theoretical approaches to analyzing popular constructs of gender and sexuality from a variety of areas, including (but not limited to) the humanities, the physical sciences, and the social sciences.

GND 300 Feminist Literary Criticism 3 Credits

This seminar explores the diversity within feminist literary analysis. Various national, ethnic and cultural standpoints are represented and the different as well as the common assumptions within feminist thought will be discussed.

GND 310 Special Topics 3 Credits

Studies in specialized areas pertaining to gender and sexuality. Topics change according to instructor and are listed in the course roster.

Prerequisite(s): one previous course in gender and sexuality studies or permission of instructor.

GND 312 Gender, War and Peace 3 Credits

Through readings in literature, history, political science, philosophy, and psychology, the course will explore critically the myths linking feminine gender with pacifism and masculine gender with aggression. Various perspectives on peace and war, the history of peace movements, and women's as well as men's participation in war will be considered.

GND 313 Gender and Ethics 3 Credits

An interdisciplinary seminar involving a concentrated study of recent works in feminist theory, with special attention to issues such as: Do men and women have different ethical perspectives and different styles of moral reasoning? How do the "ethics of care" differ from the traditional "ethics of justice?" Can the models of justice and care be integrated into a more comprehensive theory?

GND 318 Gender and Communication 3 Credits

This course focuses on interactive relationships between gender and communications in contemporary American society. It connects theory and research with practice to explore multiple ways communication in families, schools, media, and society in general creates and perpetuates gender roles. It is designed to heighten students' awareness of how we enact socially created gender differences in public and private settings and how this affects success, satisfaction, and self-esteem.

GND 319 Gender and Sexuality in American Society 3 Credits

What makes a man, exactly, and what makes a woman? What kinds of sex are normal, and what kinds are abnormal? Who decides, and why? The answers to these questions are not fixed. Throughout American history, popular understandings of gender and sexual norms evolved in close relationship with the political, economic, racial, and social dictates of the time. This course will trace the evolution of ideas on sex and gender from the 18th century to the present using various historical sources including fiction and film, particular attention will be given to analyzing dominant models of proper behavior and the complex relationships of power enmeshed within them.

GND 322 Witch Hunts: Femicide Through Centuries 3 Credits

We will look at the perceived definitions of "witch" and "witchcraft" in relation to establishing medieval to modern gender codes. Our detailed study of perceptions of witches and their practices will reveal the power dynamics, social constructions and definitions that aided in the demise of countless women labeled as "witches" throughout history. Considerable time will be spent in exploring the internal controversy within the field of witchcraft studies regarding the use of words such as "genocide," "femicide," and "gendercide."

GND 333 Gender and Sport 3 Credits

Typical thoughts of sport include ticket prices, player salaries, team rosters, and league standings; rarely is it viewed from a gender perspective. This course will go beyond the examination of Title IX to better understand the relationship between masculinity, femininity and sports. This course will examine various aspects of gender and sport, including media and gender representation, race and ethnicity, drugs and violence, men and masculinities, sexualities, policy and politics, the feminist critique of sport, the initiation rites and hazing in college sports, sports wagering, and the internationalization of sport, including but not limited to the Olympics and Paralympics.

GND 340 Biology of Gender and Sexuality 3 Credits

It is expected that students will gain a base of knowledge sufficient to understand science as a way of interpreting the natural world and to evaluate scientific information provided in popular media for its validity as related to topics of biology and gender and/or sexuality..

GND 350 Leadership and Community 3 Credits

Designed for all students whose future plans include community service, organizing, and leadership, this course will study organizing in response to domestic violence, discrimination on the basis of gender and sexuality, sexual harassment, and other issues that are significant for women and/or the LGBTQ community. Building coalitions, skills for leadership, and strategies for effective organization will be covered in readings and in class discussions and students will practice what they have learned by volunteering in a local nonprofit organization.

GND 400 Seminar in Transcultural Gender and Sexuality 3 Credits

This seminar offers an opportunity for upper-level students to engage in a multidisciplinary study of the constructions of gender and sexuality in a variety of cultural contexts across the globe. Topics change according to instructor. Required for minor. Prerequisites: Junior or senior standing.

GND 490 Independent Research & Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

GND 491 Internship 1-4 Credits

Students work in an approved organization, under supervision of someone in that organization and of a gender and sexuality studies faculty member. Placements can be made in business, governmental and non-profit organizations and in local, grass-roots movements that draw on the knowledge acquired in gender studies courses. A minimum of 48 hours of field work per credit is required. Students must make bi-weekly reports, and they are required to analyze and evaluate their work at the end of the semester.

Geosciences

Program Overview

The Geosciences major prepares students for meaningful and productive post-baccalaureate employment and/or admission to high-quality graduate programs. The program incorporates a broad and challenging curriculum, which emphasizes and investigates many of the important geologic subdisciplines including rock-forming mechanisms and controls, deformational and tectonic processes, the weathering and erosion of geologic materials, the transport and deposition of derived sediments and the physical and biological history of the Earth.

Curriculum Overview

In the third or fourth year of study, all Geosciences majors attend an approved, senior-level geology field camp where they learn not only fundamental field and mapping skills, but also how to professionally apply and integrate what they have learned in their individual courses to complex, real-world geologic problems.

Honors Program in Geosciences

Graduation with honors in Geosciences is awarded in recognition of majors who have demonstrated outstanding academic ability. Enrollment in the program is by invitation of the faculty of the Department of Geological, Environmental, and Marine Sciences (GEMS). Eligibility requirements include a minimum GPA of 3.5 in courses required for the major and the satisfactory completion of a senior thesis. In addition, an honors candidate must maintain an overall minimum GPA of 3.0.

Degree Offered

- B.S. in Geosciences

COURSES AND DESCRIPTION**CHE 120 Principles of Chemistry 3 Credits**

For students who have successfully completed one year of high school chemistry. This systematic study of the fundamental principles and concepts of chemistry covers atomic structure, bonding, stoichiometric relationships, including solution and oxidation-reduction reactions, and molecular structure. Three hours of lecture per week. Prerequisite(s): High school chemistry or CHE 100 is recommended before taking this course.

Corequisite(s): CHE 121.

CHE 121 Principles of Chemistry Lab 1 Credits

For students concurrently taking CHE 120. Experiments involve gravimetric, volumetric, and spectrophotometric quantitative analysis. One three-hour lab per week. Fall.

CHE 122 Intro to Chemical Systems 3 Credits

A continuation of CHE 120. For students majoring in the sciences but may be taken by others. Chemical systems in which the study of kinetics, thermodynamics, equilibrium, and radiochemistry are emphasized. Three hours of lecture per week. Prerequisite(s): CHE 120, MTH 105 or higher.

Corequisite(s): CHE 123.

CHE 123 Quantitative Methods Lab 1 Credits

Usually taken concurrently with CHE 122. Primarily for students majoring in the sciences. A number of quantitative classical and instrumental methods of analysis are used to determine thermodynamic properties and reaction mechanisms. One three-hour lab per week. Prerequisite(s): CHE 121.

Corequisite(s): CHE 122.

ENV 200 Statistical and Computer Applications in the Natural Sciences 4 Credits

This course introduces important statistical concepts, their application, and the usage of computer technology relevant to biological, environmental, geological, and marine problems. Students will learn various graphical and statistical techniques and how to execute them on personal computers. The curriculum emphasizes the integrated nature of these techniques and their importance to meaningful data evaluation and representation. Laboratory exercises are designed to emphasize useful solutions to problems found in many scientific disciplines using computer-based methodologies. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 200L.

ENV 200L Statistical and Computer Applications in the Natural Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 200.

ENV 205 Introduction to Geographic Information Systems (also cross listed as GLS-205) 3 Credits

This course introduces the computer-based concepts and skills of Geographic Information Systems (GIS). It covers the basic GIS concepts, such as map characteristics and projections, spatial data models and analysis, and relational databases. It explores data sources, data quality, and metadata, as well as implementation and management of specific GIS projects. Hands-on experience with ArcGIS software is provided through a series of student exercises completed throughout the semester. Students will also be taught how to process both vector and raster data using ArcGIS software. The course is relevant for students from numerous disciplines in the natural sciences, social sciences, and business, which require the analysis and graphical representation of spatial data. Three hours of lecture per week. Note: This course is cross-listed as GLS 205. Students may not receive credit for both ENV 205 and GLS 205.

ENV 220 Weather and Climate Change 3 Credits

This course introduces students to the concepts of weather and climate change. These concepts frame a continuum from short-term or daily changes in the atmosphere (meteorology) to those changes averaged over much longer periods of time (climatology). Students will learn the fundamentals of weather forecasting, the causes of natural variation in the Earth's climate, and the impact of human actions on the Earth's climate. Connections will be drawn to other current issues in the Earth system, including land use change, biodiversity, and pollution. Three hours of lecture per week.

Prerequisite(s): GEO 100 or permission of instructor.

ENV 375 Environmental Biogeochemistry 3 Credits

This course examines the biogeochemical interactions among various environmental components, including water, rock, soil, organisms, and atmosphere. Covered topics focus on the relation between the biosphere and changes in the Earth's environment and atmosphere. The transfer of energy and nutrients within terrestrial ecosystems also is explored. Case studies from various examples will be used to understand ecosystem dynamics. Long-term environmental change and present-day ecosystem restoration activities are examined in the context of biotic offsets and land-use planning. The biogeochemical cycles of some environmentally sensitive compounds and elements in natural systems, such pesticides, mercury, and lead, also may be examined. Three hours of lecture per week.

Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121, CHE 122, CHE 123.

GEO 100 Earth Systems Science 3 Credits

Investigates the major global processes that occur on Earth. These processes can be grouped into four major systems: atmosphere, hydrosphere, lithosphere, and cosmosphere. Each system interacts with and affects the other systems creating, in a sense, a single Earth process. With this approach, the student will view the Earth as a whole, and understand that the many seemingly separate components that make up this planet are, in fact, a set of interacting processes, that operate in cycles through time, within a single global system. Three hours of lecture per week.

GEO 102 Earth Materials and Processes Lab 1 Credits

A hands-on laboratory experience involving the origin, significance, identification, and classification of Earth materials and processes. Mineral and rock specimens, soil and water samples, and topographic and geologic maps are utilized. Numerous field trips to local sites help students visualize many of the concepts discussed. One three-hour lab per week.

Prerequisite(s): concurrent enrollment in, or prior completion of, GEO 100 or GEO 113 is required.

GEO 168 Mesozoic Ruling Reptiles 3 Credits

A survey of the vertebrate groups that dominated the land (Dinosaurs), the seas (Mosasaurs, Plesiosaurs, Pliosaurs, Tylosaurs, and Ichthyosaurs) and the skies (Pterosaurs, Pterodactyls) during the Mesozoic Era. The course considers diversity of skeletal architectures and their reconstructed function and the often controversial, inferred anatomy, physiology, reproductive strategy, habit, and social behaviors of these animals that are different from mainstream reptiles, birds, and mammals. It also covers the paleogeographical, and paleoclimatological conditions that facilitated the evolutionary rise to dominance and diversification of these vertebrate groups and the debated causes of their eventual extinction. Three hours of lecture per week. Weekend field trips may be required.

GEO 201 Elements of Mineralogy 4 Credits

The physical properties, chemistry, atomic structure, crystallography, uses, and environmental impacts of important minerals of the lithosphere and biosphere are presented. In addition, lab assignments and exercises emphasize crystal symmetry and chemistry; polarizing microscope, ICP, and x-ray analytical techniques; the graphical display and interpretation of compositional data; optical properties of isotropic and uniaxial minerals; and the identification of mineral hand specimens. Three hours of lecture and one three-hour lab per week. At least one weekend field trip required. Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121 taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 201L.

GEO 201L Elements of Mineralogy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 201.

GEO 305 Petrology and Petrography 4 Credits

The origin, evolution, and terrestrial distribution of igneous and metamorphic rocks are presented and detailed. Classroom lectures and discussions emphasize rock geochemistry, mineralogic variability, the constraints placed on petrogenetic models by physio-chemical studies of natural and synthetic systems, and the relation of the various rock types to current plate tectonic theory and other whole-earth processes. The laboratory emphasizes the continuing development of optical microscopy skills, the identification of rock texture and mineralogy in thin section and hand specimen, the optical determination of mineral composition, and the recognition of possible petrogenetic processes as recorded in the rocks themselves. Three hours of lecture and one three-hour lab per week. Two weekend field trips required. Prerequisite(s): GEO 201, and CHE 122 and CHE 123 or taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 305L.

GEO 305L Petrology and Petrography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 305.

GEO 306 Sedimentology and Stratigraphy 4 Credits

The principles of weathering, erosion, transportation, and deposition of sediment are the focus of this course. Sediment characteristics are examined to identify the processes involved in transporting grains and the specific environment in which the grains were deposited. Students will learn how to collect, analyze, and interpret sedimentary data and how to interpret surface and subsurface stratigraphic data using various techniques, such as lithostratigraphic, biostratigraphic, and geophysical, correlations. Field trips will expose students to different sedimentary environments and provide opportunities for students to learn how to conduct fieldwork. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): GEO 100.

Corequisite(s): GEO 306L.

GEO 306L Sedimentology and Stratigraphy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 306.

GEO 310 Structural Geology 4 Credits

The origin, distinguishing characteristics, and geographic distribution of deformational structures of the Earth's crust. In the laboratory, GPS, GIS, geologic maps, and three-dimensional problems are used in the study of typical surface and subsurface geologic problems. Three hours of lecture and one three-hour lab per week. Weekday and/or weekend field trips may be required. Prerequisite(s): GEO 100 or GEO 113, GEO 102.

Corequisite(s): GEO 310L.

GEO 310L Structural Geology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 310.

GEO 350 Soil and Surficial Processes 4 Credits

This course examines the physical, chemical, hydrological, and biological aspects of soil and their relation to geomorphologic development.

Specific topics include descriptions of soil texture and structures, soil classification, soil colloids, soil redox and pH, and their effect on vadose zone water chemistry. Soil genesis and erosion controls, microbiology/ecology, nutrient cycles, and modern soil pollution from sludge and pesticide applications, as well as domestic and industrial chemical spills, also are discussed. The lab portion of the course introduces the basic techniques of soil analysis, both physical and chemical, and field survey methods. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, and GEO 102.

Corequisite(s): GEO 350L.

GEO 350L Soil and Surficial Processes Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 350.

GEO 407 Hydrology and Water Resources 4 Credits

This course introduces the principles that govern both surface water and groundwater flows that have applications to societal water needs. Surface water topics cover the basics of the hydrologic cycle, the processes of precipitation, evapotranspiration, runoff, and infiltration, and various factors affecting water supply and water quality issues in a modern watershed. Groundwater topics examine the principles that govern flow through a porous medium and the basics of well hydraulics under different pumping conditions that community development requires. Laboratory exercises will give students hands-on experience with the delineation of watersheds, analysis of precipitation data, and flow contaminant transport modeling. The field portion of the laboratory includes runoff and stream discharge measurements, as well as hydraulic conductivity estimations from both slug and pumping tests. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, GEO 102, and MTH 105.

Corequisite(s): GEO 407L.

GEO 407L Hydrology and Water Resources Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 407.

MAR 120 Oceanography 3 Credits

Investigates the interrelationships among the geological, chemical, physical, and biological aspects of oceanography. Topics include origin and evolution of ocean basins; physical characteristics of modern oceans; seawater chemistry; ocean and atmosphere interactions; ocean currents; waves and tides; coastal processes; biological productivity; and diversity, distribution and adaptations of marine organisms. Throughout the course, emphasis is placed on the processes that connect the seemingly separate topics to each other and to human life. Weekend field trips may be required. Three hours of lecture per week. Note: This course is cross-listed as GLS 120. Students may not get credit for both MAR 120 and GLS 120.

MAR 121 Introductory Oceanography Lab 1 Credits

Introduction to the fundamental aspects of geological, chemical, physical, and biological oceanography. Students learn through inquiry-based, hands-on exercises and activities using actual data collected in the lab and in the field. Independent projects and local field trips during lab and on weekends may be required. One three-hour lab per week.

Corequisite(s): MAR 120 or GLS 120 or as prerequisite(s).

MAR 210 Marine Life Through Time 4 Credits

Survey of the important developments in marine life over the last three billion years from the Pre-Cambrian evolution of one-celled organisms, through the Cambrian explosion of complex marine invertebrate life and subsequent diversification of backboned organisms in the Ordovician time, to the colonization of marginal marine and freshwater habitats in the Silurian-Devonian geological periods, and ultimately to extinctions during global crises of the late Devonian, Permian, Triassic, Cretaceous, and Pleistocene time intervals. The emphasis is on evolutionary adaptive breakthroughs within each phylum, particularly the significant morphological and anatomical innovations, and the subsequent radiation of these higher taxa into new habitats and niches through geologic time. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): GEO 100 or GEO 113, GEO 102 or BIO 115 or permission of instructor.

MAR 210L Marine Life Through Time Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 210.

MAR 340 Marine Processes and Environments: Seminar 3 Credits

This course is designed as a seminar course. Therefore, students will learn to lead class discussions, to analyze and critique peer-reviewed journal articles, and to enhance their presentation skills. Students will interpret graphical, spatial, and numerical data to support their positions. Content will emphasize the interactions among marine processes, biological features, and geologic landforms.

Prerequisite(s): MAR 120 or GEO 100; GEO 306.

PHY 100 Principles of Physics I 3 Credits

Introductory noncalculus physics with applications for pre-professional, biology, and geological, environmental and marine sciences majors. Classical mechanics, energy, mechanical waves, fluid statics and dynamics, thermodynamics. Elements of modern physics are interwoven with those of classical physics from the beginning. Not open to chemistry, physics, or mathematics majors. Three hours of lecture per week. **Prerequisite(s):** MTH 105, MTH 210, MTH 211 or MTH 212.

Corequisite(s): PHY 100L.

PHY 100L Principles of Physics I Lab 1 Credits

For students concurrently taking PHY 100. One three-hour lab per week.

Corequisite(s): PHY 100.

German

Program Overview

Majoring in a foreign language such as German allows students to pursue careers in business, management, law, government, teaching, translation, publishing, communications, and travel.

A major or minor in German offers students the opportunity to receive a practical grounding in the German language and culture through a challenging curriculum which may include study abroad. In addition, our language, literature, film and culture courses prepare students to understand cultural diversity abroad and at home, to appreciate their own language and culture, and to gain global awareness. An individual fluent in another language acquires insight into the world in which we live. Advanced foreign language skills, combined with an international perspective and intercultural expertise, position our students for productive careers in the global and multicultural marketplaces of the 21st century. Faculty engagement in research and teaching excellence combines with our unique "accent on the individual" through advisement and co-curricular opportunities to create a challenging yet supportive atmosphere in which students can realize their potential.

A major or minor in German will also complement many degree programs in business, education, music and the liberal arts.

Students majoring in German have access to a state-of-the-art Foreign Language Media Center with 25 computer work stations with Internet access for self-paced work and classroom instruction including interactive audio, video and text-based materials.

Curriculum Overview

Classes in the German major include introduction to German literature, German composition and conversation, German for Business, German culture and modern German drama and conversation. Students also

study literature and culture and liberal arts. Some requirements may be met by studying abroad.

Students may also major in French or Spanish or minor in Chinese, French, Italian and Spanish.

Note: Students must receive a grade of "C" or better in courses required for the major or minor in the department. If a student receives a grade lower than "C" in a required course, the student must meet with his/her academic advisor to discuss the appropriate action that must be taken to remedy the situation.

Honors Program in Languages, Literatures and Cultures

The department faculty will identify prospective honors students at the earliest possible moment and offer them challenges and encouragement to develop to their highest potential. A student who has a 3.25 cumulative average and a 3.5 average in the major may be invited by the department, upon recommendation of a faculty member, to become a candidate for the honors program. Students should submit to the chairperson of the department, early in their sixth semester (March 15 or October 15), an Independent Research and Study (490) project form signed by a faculty sponsor.

Applicants enroll in the 490 appropriate for their language in their seventh or eighth semester, and they are expected to develop their thesis or capstone project proposal and begin working on it over the prior summer. A substantive research project should be presented no later than April 15 or November 15 before a committee made up of the thesis advisor and other appropriate faculty members. Honors in languages, literatures and cultures are granted upon the successful completion and defense of the thesis or capstone project and the recommendation of the faculty of the particular language.

Students who are education majors and complete their teaching practicum in their final semester should plan to complete the thesis/capstone project in their seventh semester. Non-education students may complete it in the final semester of the senior year.

German Major Requirements

(24 credits beyond German IV and 12 credits in collateral liberal arts courses)

Core Requirements	
See LAS Core Page (p. 454)	
Select eight of the following:	24
GER 300	Composition & Conversation
GER 301	German for Business
GER 305	Intro to German Literature
GER 307	German Literature and Film
GER 310	German Culture
LIT 322	German Lit & Film in Eng Trans
GER 425	Self/Society in Short Fiction
GER 430	Modern German Drama
GER 490	Independent Research and Study
GER 496	Special Studies
Liberal Arts	
Select one option:	12
Option I	
Select two of the following:	
LIT 250	Masterworks of Western Lit I
LIT 251	Masterworks of Western Lit II
Two additional courses in another foreign language.	
Option II	
LIT 250	Masterworks of Western Lit I
or LIT 251	Masterworks of Western Lit II
Three additional courses in another foreign language.	
Total Credits	78-79

Some of the requirements for the major may be met by Study Abroad, by agreement with the department. Credit toward the major may be granted for German III and IV if the student has begun study with German I and II.

All majors must take at least one German course per semester in the senior year.

German Minor Requirements

(18 credits)

GER 200 & GER 201	German III and German IV ¹	6
Four German courses at the 300-level or above		12
GER 300	Composition & Conversation	
GER 301	German for Business	
GER 305	Intro to German Literature	
GER 307	German Literature and Film	
GER 310	German Culture	
GER 425	Self/Society in Short Fiction	
GER 430	Modern German Drama	
GER 490	Independent Research and Study	
GER 491	Internshp in Foreign Languages	

GER 496	Special Studies
Total Credits	18

¹ Two advanced language or literature courses will be substituted upon demonstrated proficiency.

42-43 Some of the requirements for the minor may be met by Study Abroad by agreement with the department. Students must enroll in at least one upper-level course upon completion of a Study Abroad program.

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

-----------------------------------	-----

Courses and Descriptions

GER 100 German I 3 Credits

An introduction to German stressing the spoken language and the fundamentals of grammar. Students are required to work extensively with audio CDs.

Prerequisite(s): placement test if German has been studied elsewhere.

GER 101 German II 3 Credits

A continuation of German 100. Communication skills are broadened, fundamental grammar is studied, and a useful basic vocabulary is acquired. Students are required to work extensively with audio CDs.

Prerequisite(s): GER 100 or placement test.

GER 200 German III 3 Credits

Intensive review of German grammar and syntax with a systematic approach to oral expression and composition. Readings on contemporary German life and selections from modern literature.

Prerequisite(s): GER 101 or placement test.

GER 201 German IV 3 Credits

Continuation of grammar review and readings. Special emphasis on oral expression and composition of increasing sophistication, proceeding from concrete observations to theoretical and abstract discussion.

Prerequisite(s): GER 200 or placement test.

GER 300 Composition & Conversation 3 Credits

Practice in German communication skills through developing oral and written expression, comprehension and vocabulary.

Prerequisite(s): GER 201, placement test at 300-level or above, or GER 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

GER 301 German for Business 3 Credits

Basic fundamentals for applying the German language to business operations and correspondence. Emphasizes German business terminology as contained in business-related journal articles, letters, and documents.

Prerequisite(s): GER 201, placement test at 300-level or above, or GER 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

GER 305 Intro to German Literature 3 Credits

An introduction to works selected from the most important periods of German literature from the Hildebrandslied to the pre-classical period. Primary focus on close reading of complete works by Lessing and Goethe. Required for majors.

Prerequisite(s): GER 201, placement test at 300-level or above, or GER 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

GER 307 German Literature and Film 3 Credits

Focus on major works of 19th- and 20th-century German literature and their film adaptations. Readings include works by Büchner, Kafka, Mann, Brecht, Böll and Dürrenmatt. Films by Herzog, Welles, Visconti, Schlöndorff, and others.

Prerequisite(s): GER 201, placement test at 300-level or above, or GER 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

GER 310 German Culture 3 Credits

Introduction to the contemporary cultures of Germany, Austria and Switzerland. Selected readings from contemporary German fiction, newspapers and monthly magazines (all in English), films, and music. No knowledge of German required.

GER 425 Self/Society in Short Fiction 3 Credits

Reading and discussion of short prose works of Hauptmann, Schnitzler, Kafka, Grass, Frisch, and others.

Prerequisite(s): GER 201, placement test at 300-level or above, or GER 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

GER 430 Modern German Drama 3 Credits

Selected plays by major German, Austrian and Swiss playwrights of the 20th century are studied within a cultural and historical context.

Prerequisite(s): GER 201, placement test at 300-level or above, or GER 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

GER 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

GER 491 Internshp in Foreign Languages 1-4 Credits

A supervised work experience in an approved organization to gain knowledge of the importance and interrelationship of foreign languages and cultures in the workplace. Placements can be made in international governmental agencies, international trade associations, multinational corporations, social service agencies, and other appropriate workplace environments both in the United States and abroad. With permission of the supervisor and faculty advisor, a three-credit internship may be substituted for a collateral requirement as credit toward the major.

Prerequisite(s): students should have completed at least one 300-level course in the foreign language.

GER 496 Special Studies 3 Credits

A seminar emphasizing a particular literary genre or the work of one author. Possible topics might be: Goethe's Faust, lyric poetry, the novella, romanticism, women writers, or other authors, periods, or genres in German literature.

Prerequisite(s): GER 201, placement test at 300-level or above, or GER 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

Global Studies

Program Overview

The global studies major is a rigorous program aimed at providing students a firm foundation and understanding of globalization, global community, international relations, and the politics of the global economy.

Employers in all areas – from education to business to law – seek out employees with global literacy. According to a recent survey asking what they looked for in college graduates, employers answered that they wanted candidates with the ability to understand the global context of situations and decisions; the ability to comprehend global issues; an understanding of the United States' role in the world; a knowledge of the cultural diversity in the U.S. and in other countries and the ability to analyze and solve complex problems, among other related topics.

Rider's global studies majors gain the tools and skills needed to thrive in this increasingly global society – along with a new way of viewing the world. Students also have crucial access to internships in the United States and around the world.

Curriculum Overview

The rigorous but flexible global studies program offers students the freedom to create their own course of study by combining courses from business to political science, from anthropology to economics, from communications to foreign languages – based on their professional interests and needs. Coursework offers insight into international events through open discussions with faculty and fellow students.

Students also have the opportunities to study abroad in a variety of countries while earning credits and/or to take part in international and domestic internship opportunities.

In addition, students have the chance to participate in global videoconferencing with students in the Middle East and other international areas to share knowledge of educational systems, lives, hopes and dreams, and to promote understanding across cultures.

Degrees Offered

- B.A. in Global Studies

POL 367/GLS 367	Politics of Exile, Asylum and Diaspora	
IV. Language and Culture		
All upper-level languages, or any foreign language prefix course at the 200 level or above are credited toward the major provided all the other requirements are fulfilled. Students will receive credit for any courses in a second foreign language, provided all other requirements are fulfilled.		
V. Global Economics		
ECO 200	Principles of Macroeconomics	
ECO 201	Principles of Microeconomics	
FIN 308	International Finance	
Total Credits		21

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Courses and Descriptions

GLS 113 Environmental Geology 3 Credits

Examines the premise that "our society exists by geologic consent subject to change without notice" by studying a number of important geologic processes and the hazards and/or resources they present to individuals, society, and the natural environment. Topics discussed include earthquakes, volcanism, stream flooding, coastal erosion, climate change, and water, soil, mineral, and energy resources. Cost/benefit considerations, hazard mitigation concepts, economic and political ramifications, and the interactions between the lithosphere, hydrosphere, atmosphere, and biosphere also are presented. The course is designed to give non-science majors a deeper appreciation of their connection to the surrounding geologic environment, leading to better, more informed business, political, and personal decisions. Three hours of lecture per week. Note: This course is cross-listed as GEO 113. Students may not get credit for both GLS 113 and GEO 113.

GLS 120 Oceanography 3 Credits

Investigates the interrelationships among the geological, chemical, physical, and biological aspects of oceanography. Topics include origin and evolution of ocean basins; physical characteristics of modern oceans; seawater chemistry; ocean and atmosphere interactions; ocean currents; waves and tides; coastal processes; biological productivity; and diversity, distribution and adaptations of marine organisms. Throughout the course, emphasis is placed on the processes that connect the seemingly separate topics to each other and to human life. Weekend field trips may be required. Three hours of lecture per week. Note: This course is cross-listed as MAR 120. Students may not get credit for both MAR 120 and GLS 120.

GLS 121 Introductory Oceanography Lab 1 Credits

Introduction to the fundamental aspects of geological, chemical, physical, and biological oceanography. Students learn through inquiry-based, hands-on exercises and activities using actual data collected in the lab and in the field. Independent projects and local field trips during lab and on weekends may be required. One three-hour lab per week. Note: This course is cross-listed as MAR 121. Students may not credit for both GLS 121 and MAR 121.

Prerequisite(s): Concurrent enrollment in, or previous completion of, MAR 120 or GLS 120 is required.

GLS 180 Understanding Global Relations 3 Credits

Offers an introduction to Global and Multinational Studies by exposing the student to basic concepts necessary to understand the dynamics underlying the emerging worldwide society of diverse nations. The student will become acquainted with the mechanisms by which contacts are built across nations, and the factors that shape the conception of and relations with "the other."

GLS 200 Social Construction Global Soc 3 Credits

This course discusses the emergence of an "imagined global community" in the final years of the 20th century, and the beginning of the 21st. The course will examine the forces that contribute to these changes, including the global dissemination of values, the changes in communication technologies, the globalization of the economy, and the spread of international non-governmental institutions and lobbying forces.

GLS 201 Politics of the Global Economy 3 Credits

An examination of global political-economic institutions and governmental policies in a period of global structural change and economic crisis. Emphasis will be placed upon the attempts by advanced and newly industrializing governments to attract and to regulate transnational industrial and financial enterprise.

GLS 205 Introduction to Geographic Info Systems 3 Credits

This course introduces the computer-based concepts and skills of Geographic Information Systems (GIS). It covers the basic GIS concepts, such as map characteristics and projections, spatial data models and analysis, and relational databases. It explores data sources, data quality, and metadata, as well as implementation and management of specific GIS projects. Hands-on experience with ArcGIS software is provided through a series of student exercises completed throughout the semester. Students will also be taught how to process both vector and raster data using ArcGIS 9 software. The course is relevant for students from numerous disciplines in the natural sciences, social sciences, and business, which require the analysis and graphical representation of spatial data. Three hours of lecture per week. Note: This course is cross-listed as ENV 205. Students may not credit for both GLS 205 and ENV 205.

GLS 210 Public Opinion 3 Credits

Public opinion as a social force and as expression of public sentiment on political and social issues. Topics include: development and dissemination of opinions, the measurement of public opinion, public opinion and governmental processes, and the reciprocal relationship between mass media and public opinion. Note: This course is cross-listed as POL 210. Students may not get credit for both GLS 210 and POL 210.

GLS 215 Global Politics 3 Credits

The struggle for power, wealth, and order at the global level involving nation-states, intergovernmental organizations (such as the United Nations, the European Union, etc.), non-governmental organizations, transnational enterprises and other non-state entities, using military, economic, diplomatic, legal, and communication instruments. Overview of global problems such as the proliferation of weapons of destruction, ethnic and religious conflicts, human rights, and the global environment at the threshold of the 21st century. Real-time use of the Internet is an integral aspect of this course in terms of readings and assignments. (This course is a prerequisite for POL 295 Special Projects in Political Science: Model United Nations.) This course is cross-listed as POL 215. Students may not get credit for both GLS 215 and POL 215.

GLS 216 Comparative Political Systems 3 Credits

A general introduction to types of government and political regimes of the world as they try to cope with the dual challenge of ethnic micropolitics and transnational globalization. Major prototypes of democracy: the British parliamentary system, the American separation of powers system, and various combinations of these two. Traditional autocracy, totalitarian dictatorships, and late 20th-century authoritarian regimes. Students are expected to acquire in-depth knowledge of comparative political systems, and to develop a basic understanding and appreciation of the major concepts and themes in comparative political systems studies.

GLS 219 Terrorism, Revolutions and Political Violence 3 Credits

Revolutions are the mad inspiration of history." Trotsky's characterization calls attention to three important dimensions of violent political participation: the historical settings, ideology, and emotional fervor of the practitioners. The course focuses on these dimensions by analyzing revolutionary and terrorist movements in the 20th century. Special attention is given to the use of violence in the post-Cold War new world disorder. Note: This course is cross-listed as POL 219. Students may not get credit for both GLS 219, POL 219 and HLS 219.

GLS 225 Nationalism in World Politics 3 Credits

Nations and nationalism. An overview of nationalistic manifestations in the world today. Nations, states, nation-states. Multinational states, stateless nations. Imperialism, anti-imperialism; nativism vs. internationalism and globalism. Topics include nationalisms in the Holy Land; in the former Yugoslavia; in the former Soviet Union and its successor states; and economic Nationalism vs. Globalization. Note: This course is cross-listed as POL 225. Students may not get credit for both GLS 225 and POL 225.

GLS 252 Intercultural Communication 1.5-3 Credits

Develops intercultural communication competence through an awareness and understanding of diverse cultures and their impact on communication. This course will be different from the international communication course, which focuses on communication between nations. This course will focus on the more personal aspects of communication—what happens when people from different cultures interact face-to-face. It will introduce students to those general factors that influence communication with people from diverse cultures both internationally and within the United States, and offer a blend of skill development, communication theory, and hands-on application. Note: This course is cross-listed as COM 252. Students may not get credit for both GLS 252 and COM 252.

GLS 267 China in Transition 3 Credits

This course has two focal points: one is the rise and fall of great powers in the history of world transformation; the other is China's whereabouts in this transition. The former deals with a group of international relations theories, which focuses on system transformation. Students are expected to learn extant theoretical knowledge on how and why a great power rises and falls. The latter is our empirical referent. Students are led to study China's contemporary history, geopolitics, political economy, and international relations as to make a learned connection between theoretical wisdom and practical data on China. This course will provide students with a better understanding of China in general and its superpower status in the making in world politics in particular, offer students a chance to review the sources consequences of different approaches to greatness, and help students find his or her own analytical framework for understanding international political events that may have transforming effects in Northeast Asia as well as on the world stage. Note: This course is cross-listed with POL 267. Students may not get credit for both GLS 267 and POL 267.

GLS 285 The Student Global Village 3 Credits

This course involves deliberative discussions carried out internationally among college students using videoconferencing technology. The project involves a series of 12 weekly videoconferences between students at Rider University and students at the American University of Cairo, or another international university. Students will be provided with materials to supplement their knowledge of the other country, and to allow them to discuss chosen themes in depth. The students will be required to write papers that describe their attitudes and impressions of the other country at the beginning and the end of the project, and to summarize what they have learned based upon the conferences and readings. Short papers will be required each week to prepare the students for the videoconference theme of the week.

GLS 295 Emerging Issues Global Multin'l Studies 3 Credits

The process of globalization defines a condition of rapid political, social, and economic change. As such, subjects for study become relevant at an alarming speed in the current international environment. This course will give students the opportunity to study a current critical issue or subject, chosen according to its relevance or the special expertise of a visiting or current professor. Topics may include political, economic, or social crises that exist currently, how to deal with specific global problems such as global warming, humanitarian crises, or wars, but may also concentrate on the background of relevant areas such as Iraq or the European Union.

GLS 306 Political Film 3 Credits

This course analyzes the structure, history, and impact of the genre of political film. It begins with a discussion of how one distinguishes a political film from other forms of cinema. It then proposes insights into the manner in which these films evoke a particular time and place in politics, affect the viewer's interpretation of a political event or figure, and have an effect upon a viewer's political perceptions or behavior. The student will also learn to review films critically, both as political statements and as effective (or ineffective) conveyors of political messages. Note: This course is cross-listed as POL 306. Students may not get credit for both GLS 306 and POL 306.

GLS 307 Political Communication 3 Credits

The meaning and uses of political communication are examined, the manner and forms such communication takes, and the history of political discourse. Major topics include the role of communication in elections and the development of public policy, how political communication strategies have changed with the rise of mass media, and the development of national and international publics for discourse. Note: This course is cross-listed as POL 307. Students may not get credit for both GLS 307 and POL 307.

GLS 308 World Music 3 Credits

The student is introduced to selected world cultures by listening to and analyzing specific music that is indigenous to each culture. The position and importance of the music within each society will be the main focus of the investigation. Comparing this music to the music of our American culture will provide a basis for judging and interacting with unfamiliar world cultures. This course is cross-listed as MUS 308. Students may not get credit for both GLS 308 and MUS 308.

GLS 309 Will China Be Next Superpower? 3 Credits

This course has two focal points: one is the rise and fall of great powers in the history of world transformation; the other is China's whereabouts in this transition. The former deals with a group of International Relations theories, which focuses on systematic transformation. Students are expected to learn extant theoretical knowledge on how and why a great power rises and falls. The latter is our empirical referent. Students are led to study China's contemporary history, geopolitics, political economy, and international relations as to make a learned connection between theoretical wisdom and practical data on China. This course will provide students with a better understanding of China in general and its superpower status in the making in world politics in particular, offer students a chance to review the sources and consequences of different national approaches to greatness, and help students find his or her own analytical framework for understanding international political events that may have transforming effects in Northeast Asia as well as on the world stage. This course is cross-listed as POL 309. Students may not get credit for both GLS 309 and POL 309.

GLS 310 Ethnographic Film 3 Credits

Explores the manner in which different civilizations are depicted through the medium of documentary film. Discusses the manner in which film may contribute to ethnographic understanding of a given people, and the limitations of the genre that may misrepresent the subject matter. Special attention is given to the role of the filmmaker and his/her position as participant, observer, and recorder of the events shown on the film. The films will be analyzed in terms of how they reflect, and potentially affect, a civilization's international image and global standing. These factors will then be considered in terms of their effects upon the place and actions of the civilization in global politics.

GLS 315 Global Issues 3 Credits

Military, economic, demographic, and environmental threats to global security in the post-Cold War era. Forces of transnational integration vs. forces of intrastate fragmentation. Inadequacy of international law and organization to deal with these problems within the confines of the sovereign nation-state system. Note: This course is cross-listed as POL 315. Students may not get credit for both GLS 315 and POL 315.

GLS 320 Politics of the Middle East 3 Credits

The course emphasizes the relationships between social and political structures, the role of religion, and the problems of modernization in the Middle East. Similarities and contrasts will be drawn between the Arab and non-Arab countries of the Middle East. The political systems of Egypt, Syria, Israel and Saudi Arabia are examined in terms of political culture, structure, and political processes.

GLS 321 International Law 3 Credits

This course covers the basic doctrines of international law and their relationship to the contemporary international community. These include the jurisprudence of international law; the history of the international legal system; customary international law; Treaty law; sovereignty, statehood and recognition; jurisdiction and immunities; the role of international organizations; international criminal responsibility; and the relationship of the international legal system to the U.S. domestic legal system. The objectives of international law are to foster the peaceful settlement of disputes; facilitate transnational communication and commerce; encourage respect for human rights; as well as to preserve the environment. This course is cross-listed as POL 321. Students may not get credit for both POL 321 and GLS 321.

GLS 325 Global Perspectives Hlth & Illness 3 Credits

Explores the different international perspectives on health and illness. Themes include how men, women, and children in respective civilizations are treated and viewed within their communities or nations, as they become ill. Particular attention is given to the contrast between various types of traditional healing and Western medical practices, and their interactions. Discussions will also compare the usefulness of national versus international health agencies in dealing with global health problems.

GLS 328 Environmental Policy 3 Credits

Environmental Politics examines how policymakers deal with the political challenges of unsustainable resource consumption, which is a primary determinant of environmental problems such as climate change, adverse health effects, and biodiversity loss. The course introduces students to environmental politics and policies at the local, state, national, and international levels. The course is designed to provide students with a framework for understanding how varied interests compete within political institutions in order to transform contending ideas into public policy. With that in mind, students will not only become more informed consumers of political information, but will also become more effective at analyzing and advocating for policies as it relates to the environment.

GLS 329 Comparative Environmental Policy 3 Credits

Analyzes cross-national approaches in developing, implementing, and evaluating policy responses to environmental problems. The course analyzes the political factors, actors, and tools that help and explain why some societies have been more likely to develop effective responses to environmental threats. Note: This course is cross-listed as POL 329. Students may not get credit for both GLS 329 and POL 329.

GLS 340 Mod Democracy & its Critics 3 Credits

The course examines the fundamental assumptions underlying modern democratic theories and the main theoretical attacks launched against them. Among the contending theories to be discussed are right and left-wing anarchism, the old and the new left, fascism, intellectual elitism, and techno-conservatism. Note: This course is cross-listed as POL 340. Students may not get credit for both GLS 340 and POL 340.

GLS 342 Freedom and Authority 3 Credits

Concepts of freedom and authority in 19th and 20th-century political theory. Emphasis on such important thinkers as Nietzsche, Freud, Sartre, Camus, and Marcuse. This course is cross-listed as POL 342. Students may not get credit for both GLS 342 and POL 342.

GLS 352 Chinese and American Intercultural Commu 3 Credits

Instructs students about Chinese culture and communication. Culture impacts communication practices and styles in significant and subtle ways. Through readings, lectures, discussions, and first-hand interactions with Chinese international students, the students of this course will gain both conceptual and practical understanding of major communication differences between the two cultures, and become a more skilled intercultural communicator. Note: This course is cross-listed as COM352. Students may not get credit for both GLS 352 and COM 352.

GLS 365 Third World Politics 3 Credits

Studies the major political issues of the Third World. Particular reference to political systems of Africa, Asia, Latin America, and the Middle East according to the relevance of the examples to large conceptual issues, and according to the major interests of the instructor. Typical issues include neocolonial dependency, the role of the state in newly developed countries, military rule and democratization. Note: This course is cross-listed as POL 365. Students may not get credit for both GLS 365 and POL 365.

GLS 366 Communist Systems: Politics and Policies 3 Credits

The course aims to provide students with an understanding of the origin, development, and history of communism, as well as the current political systems and practices of communist regimes in the world. Students are expected to acquire in-depth knowledge about the origin and development of communism, the influence of communism in world politics, and political systems and policies of contemporary communism regimes. Topics examined include Communist Manifesto, communism in the USSR, communism in China, McCarthyism in the U.S., Cold War, collapse of the USSR, fall of Berlin Wall, and communism in contemporary Cuba and Korea.

GLS 367 Politics of Exile, Asylum and Diaspora 3 Credits

This course analyzes mass migrations and refugee movements and what they mean for the stability of nations, the increasing potential of severe culture clashes within societies, and the root causes of (forced) migration movements, such as problems of violence, terror and genocide, as recently seen in Darfur, Rwanda and Bosnia. In certain European countries the frequently failed integration and assimilation policies resulted in an Islamic alienation; terrorist attacks and race riots are some of the consequences. Particular attention will be given to the conflict between the refugees' and migrants' needs that result from violent, socio-economic or ecological catastrophes in the countries of origin and the various forms of reception within the host countries. Students will explore theoretical, political, legal, and socio-economic dimensions of the refugee and immigration phenomena in a global world. Other themes will include international human rights and refugee laws, theories of immigration, for example, the feminization of migration, as well as problems of acculturation, assimilation and integration in different host societies. Note: This course is cross-listed as POL 367. Students may not get credit for both GLS 367 and POL 367.

GLS 368 International Organizations 3 Credits

This course introduces students to the study of international organizations. The course examines mostly formal and governmental institutions as well as informal institutions or regimes. Topics to be covered include and are not limited to: the establishment of international organizations, evolution of international organizations, structure of international organizations, decision-making of international organizations and influence of international organizations. This course employs both theoretical and practical approaches in its examination on international organizations. Note: This course is cross-listed as POL 368. Students may not get credit for both GLS 368 and POL 368.

GLS 371 The Arab-Israeli Conflict 3 Credits

The course will begin by introducing the main players: the neo-patrimonial Arab regimes on the one hand, and the democratic, economically modern Jewish sector in Palestine on the other. The analysis will focus on the impact of the social, economic, political and religious differences between the sides on their conception of the conflict among the participants and powers outside the region. The course will concurrently examine the impacts of the dynamics of the conflict itself, relations within Islam on the one hand and between Islam and the West on the other. The latter part of the course will consider the sources of perceptual shift that led simultaneously to the narrowing of the conflict with the withdrawal of some of its participants (most Arab states) and its widening with the addition of Al Qaeda and Iran (via Hezbollah). Note: This course is cross-listed as POL 371. Students may not get credit for both GLS 371 and POL 371.

GLS 393 International Communication 3 Credits

Examines mass media systems and their influence on international communication. Emphasizes media systems of major political powers such as Russia, China, the European community, the United States, and geo-political centers such as Africa, Asia, the Middle East, and Latin America. Using a seminar format, the course explores how a nation's mass media reflect its socio-political environment and national values. Focuses on the international images constructed by the mass media. Note: This course is cross-listed as COM 393. Students may not get credit for both GLS 393 and COM 393.

GLS 447 Global Literature 3 Credits

An in-depth study of the recent literature in English of one or more writers whose cultural identification is with one of the former colonies of the British Empire, as it was defined at the beginning of the 20th century. Literature in the English language, written by authors of African, Caribbean, Pacific Island, East Asian, or South Asian cultures may be included.

GLS 490 Independent Study in GLS 1-4 Credits

This course allows students with permission of the instructor to conduct an independent research project in Global Studies in a relevant area of interest to the student and faculty member.

GLS 491 Intership in Global Studies 1-4 Credits

Students work under supervision, either in the United States or abroad, in an environment which provides experiential learning in institutions that operate in a global environment, including those in government, business, and international non-governmental organizations (INGOs). Domestic internships might also include work in agencies that deal with global problems such as an international environmental group or a refugee resettlement center. A minimum of 52 hours of field work per credit is required, with regular reports and a concluding critique analyzing the experience. No more than six credits allowed toward graduation.

Graphic Design

Program Overview

Graphic design majors at Rider gain experience and develop skills in the field of visual communication. Through a blend of coursework and hands-on experience in digital studios and labs, students learn to become critical thinkers and creative designers. The program prepares them to successfully design graphics for branding, such as logos, and for professional publications, such as brochures, magazines and newsletters.

Students often work one-on-one with distinguished faculty who have extensive scholarly knowledge and experience in their fields of expertise.

Student media organizations, from the award-winning The Rider News (<http://www.theridernews.com>) to The Rider University Network (<http://www.rideruniversitynetwork.com>) and the radio station, 107.7 The Bronc (<http://www.1077thebronc.com>), give students a chance to practice their profession right on campus.

A thriving internship and co-op program (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/communicat-20>) routinely offers students academic credit and professional experience in a number of prestigious locations.

In addition, we offer an honors program in the Department of Communication and Journalism for high-achieving students who seek to explore topics or projects beyond the required courses. Students interested in graduating with honors in Communication and Journalism should consult with their adviser or with Dr. Brown.

Curriculum Overview

Classes in the graphic design major include fundamentals of drawing or design, publication design, graphic imaging for multimedia, photography, history and principles of graphic design, advanced publication design, writing for communication professions, advanced graphic design and portfolio.

Recommended courses include art and society, fundamentals of painting, drawing, printmaking, converging media, graphic animation and others.

Total Credits 90-91

Notes:

1. Students may not carry a double major within the department. Communication and journalism majors may declare only one minor in the department. No more than two courses may be used to meet the requirements for both a major and a minor in the department.
2. If a student receives a grade lower than "C" in a course required in a major or minor within the department, the student must repeat the course. Credit will only be awarded once for a course that is repeatable. The student must also repeat the course before enrolling in any course for which it is a prerequisite.

Graphic Design Minor Requirements

(21 credits)

ART 103 or ART 105	Fundamentals of Drawing Design	3
COM 212	Publication Design	3
COM 262 or COM 361	Graphic Imaging for Digital Media Photography	3
COM 263	History and Principles of Graphic Design	3

COM 462	Advanced Graphic Design and Portfolio	3
Total Credits		21

Notes:

1. Communication and Journalism majors may declare only one minor in the department. No more than two courses may be used to meet the requirements for both a major and a minor in the department.
Exception: If a student elects either the Advertising or Event Planning and Production minor, then three courses may be used to meet the requirements for both the major and that minor within the department.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Courses and Descriptions

COM 102 Introduction to News Writing 3 Credits

Introduces students to routines of journalism, including reporting, writing and preparing content for print and web. Incorporates contemporary practices in multimedia journalism, including digital audio, video and photos, into traditional skills, with an emphasis on accuracy, clarity and professional style and voice. Class exercises are completed in a laboratory newsroom.

COM 103 Intro Comm Studies:theory&prac 3 Credits

Provides a foundation for the study of communication across the discipline. Open to freshmen only, it is designed to assist the first year student majoring in communication or journalism to gain a broad understanding of the scope and breadth of the field. Fundamental communication theories, principles, concepts, terms, and issues are introduced.

COM 104 Speech Communication 3 Credits

Examines basic communication principles and strategies of public speaking. Various genres of oral communication are studied, with an emphasis on extemporaneous and impromptu forms of delivery. Students research, prepare, and deliver speeches that are then used as the focal point for the discussion of effective speaking and listening. A number of speeches are videotaped. Students who received credit for COM 104S may not take this course.

COM 104S Intro to Speech Communication 3 Credits

As part of the EOP program, this course is designed to improve the speaking and language skills of new college students. Through directed practice, students have the opportunity to develop poise and confidence in oral communication, as well as competence in analyzing and synthesizing messages. Emphasis is placed on development, organization, and delivery of speeches. To receive credit, a grade of "C" or higher must be earned. Students who receive credit for COM 104S may not take COM 104.

COM 105 Communication, Culture and Media 3 Credits

Provides a detailed investigation and analysis into the nature, history, scope, adequacy, and limitations of mass communication and examines the reciprocal influence of the media on culture and society.

COM 106 Writing for the Comm Professns 3 Credits

Provides students with written communication writing strategies and tools. Applies theory and practice in communication to targeted audiences. Emphasizes the critical role writing plays in the communication workplace and provides an opportunity to evaluate and respond to real-life writing samples and situations.

COM 107 Writing for the Media 3 Credits

Introduces students to interviewing and persuasive writing techniques for print and electronic public relations and advertising formats. Teaches techniques for creating effective digital audio-visual aids and working with digital audio and video.

COM 131 Fundamentals of Video Production 3 Credits

Introduces students to basic video production theories, techniques, and applications. Students will gain competency in a number of video production areas including: production planning, camera operations, lighting, sound, and digital non-linear editing. Individual and group production exercises will involve planning and executing video productions in both studio and non-studio settings. This class is designed to prepare students from any major to effectively create, produce, shoot, and edit basic video production assignments including public service announcements, video news releases, educational/instructional videos, and marketing/promotional spots.

COM 201 Communication Theory 3 Credits

Explores selected theories, models, and research methods in human communication, the dynamics of the communication process in various settings, and the role of communication in human interaction.

COM 204 Advanced Speech Communication 3 Credits

Provides students with the opportunity to further their study and practice of various types of speech communication. Moving beyond an introductory perspective, this course focuses on the development of critical, analytical, and pragmatic aspects of speech. The focus is divided between the discussion of theoretical models and a demonstrated competence of that material.

Prerequisite(s): COM 104 or COM 290.

COM 205 Theories of Persuasion 3 Credits

Analyzes the motivations that lead individuals and audiences to beliefs and actions and the techniques of achieving objectives through persuasion. Attention, interest, empathy, ethos, fear, and techniques of speakers, and those who use persuasion professionally are studied.

COM 207 Social Media and Social Change 3 Credits

Introduces students to Web/ social media tools and information distribution networks that have enabled people to mobilize new types of collective action, inform publics and advocate positions. Community production and sharing of knowledge (Wikipedia), culture (YouTube, Flickr, the blogosphere), and political organizing (colorofchange.org) are current manifestations of social changes that are continuing to bloom in the 21st century. In this course, Rider University students will become literate in active Web and social media participation with a focus on engaging with current social, political and cultural issues.

Prerequisite(s): COM 201 or COM 205.

COM 210 News Reporting and Writing 3 Credits

Develops skills in hard-news reporting. Employs off-campus reporting assignments to refine information-gathering techniques such as interviewing, observation, and use of government documents and other contextual materials. Includes reporting and writing about police news, state and local government, the criminal justice system, science, business, and sports.

Prerequisite(s): COM 102.

COM 211 Copy Editing 3 Credits

Teaches all phases of copy editing for news and public relations: marking of copy, online editing, fact checking, building and shaping news and feature stories, applying mechanical style, building an ear for graceful English, and safeguarding against legal and ethical problems. Provides comprehensive review of grammar, spelling and punctuation, along with intensive practice in writing headlines and captions and editing wire copy.

Prerequisite(s): COM 102.

COM 212 Publication Design 3 Credits

Explains theories, principles, and techniques of print media layout and design. Provides an understanding of the use of type and art as design elements in various publication formats, such as newspapers, newsletters, advertisements and brochures. Directs students to apply these concepts to the creation of published materials using Adobe Creative Suite.

COM 215 Computer Assisted Reporting 3 Credits

Develops advanced reporting techniques for researching and writing in-depth news stories and investigative articles. Uses state-of-the-art computer-assisted reporting methods including finding and mining data bases on the Internet, creating spreadsheets to analyze data, and employing data base manager software to sort and summarize information in government documents and other specialized resources. Focuses on conceptualizing of story ideas, planning major projects, gathering information by means of data bases, participant-observation, interviews, and analysis of public documents. Emphasizes organizing large quantities of material and presenting it in a meaningful context, including with information graphics.

Prerequisite(s): COM 102 or permission of instructor.

COM 220 Voice and Articulation 3 Credits

Increases the student's knowledge of the vocal elements of oral communication and improves use of voice and articulation. Introduces anatomy and physiology for enhanced vocal production. Analyzes volume, rate, pitch, quality, phrasing, stress, and inflection. Presents the International Phonetic Alphabet as a means of developing correct articulation and pronunciation. Uses classroom exercises and tape recording for feedback and learning.

COM 230 Radio & TV Communication 3 Credits

Examines the field of electronic communication and its role in society. Scrutinizes the history, technology, structure, and regulation of broadcasting including issues, trends, and the impact of new communication technologies. Introduces basic principles of effective communication in broadcast writing and producing.

COM 233 Writing for Broadcast 3 Credits

Introduces diverse and highly structured writing styles and formats used in writing for broadcast. With focus on effective and creative writing using broadcast style, students will be exposed to the fundamentals of writing dramatic and non-dramatic material for radio and television including station IDs and liners, public service announcements and commercials, news and public affairs programs, and short dramatic and documentary scripts. Through lectures, case discussions, in-class assignments, and critiques, emphasis will be on the practical application of basic rules and conventions common to broadcast writing from copy preparation to on-air delivery.

COM 234 Audio Production 3 Credits

Provides a laboratory study of audio production techniques, and performance. Introduces the fundamental properties of sound as applied in modern audio production at radio and television stations, sound studios, and production houses. Students conduct lab exercises in editing, mixing, and digital recording using ProTools. Students perform a variety of genres including news, commercials, dramas, and promos.

COM 235 Digital Filmmaking 3 Credits

This course will provide students with an introduction to basic narrative film production including theories, techniques and applications. Students will gain competency in a number of film production areas including: idea generation and scripting, production planning, cinematography, lighting, sound and digital editing. Working as individuals and in groups, students will develop and produce short narrative film projects. Students will continue to develop proficiency and mastery of the use of specialized vocabulary of the film industry as well as the ability to analyze film and its narrative structure. In addition students will break down the "narrative" focusing on genre conventions and subtext. Students will additionally examine the relevance of film to society while developing proficiency and mastery in the study of how to create film projects.

COM 236 The Aesthetics of Filmmaking 3 Credits

Introduces students to basic terminology, techniques, theories and criticism commonly used in digital filmmaking. Through lecture, class discussion and screenings, students will learn how film theory, criticism and aesthetics impact the filmmaking process. Students will review and analyze films of different genres; the different approaches adopted by filmmakers; and the various elements and techniques that contribute to the creation of powerful and effective films. Aesthetic elements such as production design, mise en scene, cinematography, lighting, editing, sound design and script development will be introduced and practiced.

COM 240 Public Relations 3 Credits

Introduces current theories and practices of public relations, with emphasis on facilitating two-way communication with various publics. Explores approaches to public relations problems by critically analyzing case studies and applying theories and techniques to realistic situations.

COM 251 Interpersonal Communication 3 Credits

Focuses on the study of various communication concepts and theories and the development of interpersonal skills and sensitivities. More specifically, students will participate in lectures, exercises, and projects while exploring the role and function of relationships in their professional, social, and personal lives.

COM 252 Intercultural Communication 1.5-3 Credits

Develops intercultural communication competence through an awareness and understanding of diverse cultures and their impact on communication. It will introduce students to those general factors that influence communication with people from diverse cultures both internationally and within the United States, and offer a blend of skill development, communication theory, and hands-on application. Note: This course is crosslisted as GLS 252. Students may not get credit for both COM 252 and GLS 252.

COM 253 Organizational Communication 3 Credits

Focuses on the ongoing communication processes in organizations. This course examines how and why organizations develop policies and procedures that both encourage and yet constrain creativity and autonomy in employees. It also introduces various management skills to balance the dynamic in organizations. Finally, the course introduces students to various communication technologies that enable communication processes in organizations. Students will also have opportunities to participate in creating organizational dynamics through role-playing exercises, case studies, and other kinds of experiential learning.

COM 254 Intro to Health Communication 3 Credits

Health communication has been shown to have a positive impact on a number of facets of the medical visit, including patient outcomes, patient satisfaction, and job performance and satisfaction. This course will provide students with tools to implement health communication practices in a healthcare setting in order to improve these areas. In addition, health communication is particularly useful in cross-cultural situations, both in regard to the patient-provider relationship, when the ethnicities of the two parties may be different, and when cultural beliefs may impact a patient's medical wishes. Part of the tools for implementing health communication into the practice setting includes an understanding of the role that culture can play in healthcare and the development of strategies to provide optimal medical care while also respecting cultural intricacies.

COM 261 Web Design I 3 Credits

Introduces students to digital graphics, text, audio and video for Web design using Adobe Creative Suite. Students will learn the basics of audio, video, graphic, and interactive software along with theories of design and perception that underlie effective presentation of digital messages.

COM 262 Graphic Imaging for Digital Media 3 Credits

Teaches students techniques for image development, and image preparation for various multimedia applications. Emphasis is placed on color calibration and palette issues, image manipulation, advanced image selection techniques, transparency and masking, multimedia authoring file formats, and dynamic image design. Students will be expected to participate in critiques of professional designs in order to learn to critically evaluate their work and their fellow students' work.

Prerequisite(s): COM 261 or permission of instructor.

COM 263 History and Principles of Graphic Design 3 Credits

Covers the history and principles of graphic design from analog art through the digital revolution. The elements and principles of design will be used to study stylistic progressions, artistic techniques, design innovations, and mechanical inventions. Material will be presented through a combination of illustrated lectures and discussions.

COM 264 Intro to Media Convergence 3 Credits

Introduces the ways that the merging of media industries and the intersection and integration of various media platforms and technologies impact our lives. While the primary focus will be on digital and mobile technologies and practices, the course will also cover the convergence of digital technologies in a wide range of media areas, including journalism, social media, television and entertainment. The course will offer students broad conceptual frameworks for thinking about how the emergence and evolution of digital as well as mobile communication technologies have changed the communication and journalism industries and how they are reshaping content. In addition, the course is intended to allow students to use different digital communication technologies.

COM 265 3D Graphic Animation 3 Credits

Provides students with an introduction to the basics of 3D graphic animation techniques including modeling, texturing, rendering, visual effects and animation. Through various projects the students will learn: to model characters, sets and props, how to apply textures and color to their models, and how to bring their creations to life using various animation techniques. In addition to the technical aspects of creating successful animation, the students will also learn the aesthetics of animation in regard to cinematography, art direction, lighting, character creation, prop creation, and set creation, dramatization and narrative.

COM 270 Sports Multimedia Reporting 3 Credits

COM 270 Sports Multimedia Reporting. Develops skills in hard-news sports reporting, game coverage, and the production of introductory multimedia and social media sports content. Employs out-of-the-classroom reporting assignments to refine information gathering techniques such as interviewing, observation, and use of documents and other contextual materials. Includes reporting and writing on sports games, teams, players, coaches, athletic issues/controversies, and the business of sports.

Prerequisite(s): COM 102. Introduction to News Writing.

COM 280 Issues in Event Planning 3 Credits

Offers students education in event planning, production, and supervision for varied professional applications. Emphasis will be placed on planning, budgeting, and organizing small and large events for educational, institutional, non-profit, and professional groups. Students will participate in the entire process of event planning, with specific experiences in applying communication theory to actual projects.

Prerequisite(s): COM 240 or MKT 200.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

COM 291 Documentary Film and Video 3 Credits

Surveys the history of documentary film, including reportorial, exploratory, persuasive, symphonic, compilational, reflexive, and fictional traditions through screenings, lectures, and readings. Provides practice in film criticism. Explores philosophical questions about the relationship between non-fiction films and videos and the reality they purport to record. Analyzes ethical problems of filmmaking.

COM 301 Communication Law 3 Credits

Critically examines the legal limits and privileges affecting freedom of expression, especially in publishing, advertising, film, telecasting, and cyberspace. Places particular emphasis on the historical and philosophical foundations of the freedoms and limitations of communication in the United States.

COM 302 Communication Ethics 3 Credits

Analyzes internal and external pressures on the communication professional including economic, cultural, social, and political pressures, assesses the philosophical and practical basis for responding to such pressures, evaluates contemporary media responses to these pressures, identifies those that are of laudable quality and why, and provides guidance as to how individuals and organizations can think and react ethically. Issues addressed include censorship, confidentiality, conflicts of interests, minority and ethnic groups, privacy, sensationalism, and self-criticism.

COM 312 Spe Topics in Jour Writing 3 Credits

Provides students with the opportunity to explore specialized topics in journalistic reporting and writing. Each course will focus on a specific area in the broad field of journalism. Examples include business reporting, health reporting, and sports reporting.

Prerequisite(s): COM 102 or COM 107.

COM 316 Feature Writing 3 Credits

Focuses on problems and requirements of newspaper, magazine, public relations, and free-lance nonfiction writing. Students write features designed for acceptance in print, broadcast and digital media and learn marketing techniques.

Prerequisite(s): COM 102 or COM 107, English writing concentration, or permission of instructor.

COM 318 Gender and Communication 3 Credits

Focuses on interactive relationships between gender and communication in contemporary American society. It connects theory and research with practice to explore multiple ways communication in families, schools, media, and society in general creates and perpetuates gender roles. It is designed to heighten students' awareness of how we enact socially created gender differences in public and private settings and how this affects success, satisfaction, and self-esteem. Note: This course is crosslisted as GND 318. Students may not get credit for both COM 318 and GND 318.

COM 322 Argumentation and Debate 3 Credits

Investigates the theory and practice of speech communication that seeks to persuade by inferential argumentation. Concentrates on theories, practices, and research in argumentation and debate, blended with speaking experience in analyzing and advocating controversial topics.

Prerequisite(s): COM 104 or COM 290.

COM 323 Oral Interpretation of Lit 3 Credits

Provides an orientation to the field of oral performance. Students select literary texts, adapt the material to the audience and prepare it for presentation. Emphasizes the development of voice, articulation, and kinesic behavior. Presentations to the class are critiqued.

Prerequisite(s): COM 104 or COM 290 or permission of instructor.

COM 328 Sitcoms and American Culture 3 Credits

Provides an overview to the unique and highly structured form of the American television situation comedy. The primary focus will be on history and development with in-depth study of situation comedy themes, characters, and settings. Through lectures, case discussions, in-class assignments, and class projects, students will examine the social and cultural meanings and implications of this incredibly popular and durable genre of programming.

COM 330 Documenting Cultures Thru Travel 3 Credits

Offers students, through travel and study, a unique opportunity to gain firsthand experience of a foreign culture and to learn how to record and document their experiences using multiple media, including print, audio, video, photography and/or the Web. While traveling, students will be required to attend lecture/discussion sessions, site tours, and other planned activities. This experience will be preceded and/or followed by additional academic work to be conducted on campus. Study topics may include aspects of the historical, social, economic, political and aesthetic cultural components appropriate to the location(s) to be visited. The travel component of the course will be scheduled to avoid conflict with normal semester offerings. No foreign language skills are required.

COM 331 Television Production 3 Credits

Explores the technological capabilities and limitations of the television medium in team productions using a range of styles and formats. Students learn principles of studio production, electronic field production, and electronic news gathering. Exercises include use of computer graphics, audio production, and non-linear video editing. Stresses electronic communication skills and aesthetic values in a professional production setting.

Prerequisite(s): COM 230.

COM 333 Broadcast Programming 3 Credits

Analyzes the theory, practice, structure, and function of broadcast programming. Examines the structure of the industry as it relates to entertainment, information, and the audience. Studies program categories, formats, genres, trends, consistency, accountability, and ratings as well as cable, satellites, and home video. Critical standards are developed by introducing humanistic and scientific modes of program analysis.

Prerequisite(s): COM 230.

COM 335 Television Field Production 3 Credits

Provides an in-depth study of advanced techniques in Field Production for television. Individual and group field production assignments will involve planning and executing single camera production in a non-studio setting. Previously developed video production skills will be refined, and students will gain increased competency and sophistication in all areas of field production including: production planning, camera operations, lighting, sound, and digital non-linear editing. Designed to prepare students to effectively function in the industry as a member of a professional field production team. In field situations, students create, produce, shoot, and edit documentaries.

Prerequisite(s): COM 331.

COM 337 Music Productn for Mass Media 3 Credits

Offers students education in audio production techniques for music and other advanced audio material. Building on theory and practice introduced in the prerequisite, the class will instruct students in the theory behind acoustics and electronics as well as the digital tools and media. Those theoretical studies will be put to practice through exercises in recording music, making selections from music libraries, multi-track recording, arranging, editing, mixing and mastering. Students will begin to develop both an engineer's attention to audio detail and a musician's sense of artistry. Putting these skills to use, the students will produce complete musical works of varying musical styles, working both individually and in teams.

Prerequisite(s): COM 234.

COM 338 Writing for Broadcast II 3 Credits

Building on COM 233 Writing for Broadcast, this course provides a hands-on approach to more sophisticated reporting and interviewing techniques and writing formats used in long-form radio and television programs. This course will expose students to the following broadcast script writing areas: features, documentaries and reality programs. It will also cover writing for interview/talk show programs, music, comedy and variety programs. Students will also be exposed to writing for corporate, educational and children's programming. Students will have hands-on experiences writing, producing and editing news pieces and webcasts for student and area media outlets and web sites.

COM 341 Publicity Methods 3 Credits

Applies communication theory to writing and editorial processes and production techniques to create public relations materials; includes press releases, industrial publications, social media, trade publications, brochures, newsletters, stockholder reports, and multimedia platforms.

Prerequisite(s): COM 107, COM 240, or permission of instructor.

COM 347 Sports Media Relations 3 Credits

Critically examines the symbiotic relationship between the mass media and professional sports franchises and major college athletic programs. This course deals with the workings and processes behind executing the proper techniques of sports information and media relations, as well as an analysis of the culture of sports in modern society. Students will develop a practical focus on sports information and promotion, including the role of the sports information director and events promoter, with emphasis on advanced concepts of public relations, publicity and marketing.

Prerequisite(s): COM 240 or permission of instructor.

COM 348 Communication Research Methods 3 Credits

Introduces students to the research methods used to study communication problems and processes. Students will learn how researchers plan and design research studies, explore the methodological considerations of both qualitative and quantitative methods, and have an opportunity to gain hands-on experience in conducting research on communication-related issues.

Prerequisite(s): COM 105.

COM 350 Team & Group Communication 3 Credits

Examines the communication process as it relates to the small group. Theoretical constructs including motivation, group climate, attraction, leadership, decision making, problem solving and roles are analyzed. Utilizes group experience to study and evaluate the dynamics and effectiveness of interpersonal systems.

COM 352 Chinese and American Intercultural Commu 3 Credits

Instructs students about Chinese culture and communication. Culture impacts communication practices and styles in significant and subtle ways. Through readings, lectures, discussions, and first-hand interactions with Chinese international students, the students of this course will gain both conceptual and practical understanding of major communication differences between the two cultures, and become a more skilled intercultural communicator. Note: This course is crosslisted as GLS 352. Students may not get credit for both COM 352 and GLS 352.

COM 353 Nonverbal Communication 3 Credits

Investigates studies in and theories of nonverbal communication. Lectures and experiential activities explore the effect of status, culture, and gender upon kinesics, physical characteristics, proxemics, tactile communication, paralanguages, artifacts, and environmental factors.

Prerequisite(s): COM 104 or COM 290 or permission of instructor.

COM 360 Adv Publicatn Design & Present 3 Credits

Builds on elementary knowledge of graphic design to teach the principles of advanced layout, and computer graphics. Introduces students to industry standard drawing software and builds on their knowledge of layout software gained in the prerequisite course. Provides an understanding of the use of logos, infographics and magazine layout, and of the theoretical bases of color for print production.

Prerequisite(s): COM 212.

COM 361 Photography 3 Credits

Using digital SLR cameras, introduces students to professional methods of shooting varied subjects while applying a range of compositions and styles. Using Photoshop, students edit images for publication in print and on the Internet. Hands-on coursework is grounded in theory, history, aesthetics, and ethics. Some cameras are available for loan from the University.

Prerequisite(s): permission of instructor.

COM 363 Converging Digital Media 3 Credits

Examines the digital technologies that make up the new world of digital convergence. The course will examine the effects of digital media convergence on social life, ethics, industry, and local and global communities through a variety of theories and paradigms. This course will also help students develop necessary digital media production skills and use them critically to solve media development problems.

COM 364 Web Design II 3 Credits

Equips students with the theories and practical techniques required to produce effective digital text, graphics, and animations for the Web. Discusses theories behind the use of these media in terms of effective communication and interaction. Introduces students to different computer platforms and requirements for cross-platform media.

Prerequisite(s): COM 261 or permission of instructor.

COM 365 Graphic Animation 3 Credits

Offers students education in graphic animation theories, animation development techniques, and animation preparation for various multimedia applications. Emphasis is placed on the design principles in animated communication and animation techniques. The course covers the integration of static images in animation, graphic animation techniques, animation compression, animation rendering, input/output file formats, and animation delivery. The primary software for this course is Adobe Photoshop and Macmedia Flash. Students will be expected to participate in critiques of professional animation designs in order to learn to evaluate critically their own work and their fellow students' work.

Prerequisite(s): COM 262 or permission of instructor.

COM 366 Project Management in Graphic Design 3 Credits

Explores the creative process of graphic design while developing an understanding of the methods employed in problem solving in the industry standard design software packages. Students learn how to create a hierarchy of information through the ordering of elements into a comprehensive visual unity. They consider the relationship between content and page size, proportion, grid and margins. Students learn about typography as a design element and how it works with other visual elements in design. In order to develop an understanding of the project-planning process for either printer or Web projects, students will develop and present a series of projects that will build on one another to develop their "visual voice." Students will be evaluated on their ability to apply course material to the projects to create professional-quality work; their ability to apply exchange ideas and accept and apply constructive criticism; and on their participation in class discussions, critiques and presentations.

Prerequisite(s): COM 262, COM 360.

COM 367 3D Graphic Animation II 3 Credits

Continue to learn the techniques of 3D computer animation including modeling, texturing, rendering, visual effects and animation. In addition to the technical aspects of creating successful 3D animation the students will also learn the aesthetics of animation in regard to cinematography, art direction, lighting, character creation, prop creation, and set creation.

Prerequisite(s): COM 265.

COM 370 Sports Television and Field Production 3 Credits

Provides an in-depth study of advanced techniques in sports field production for television. Individual and group field production assignments will involve planning and executing single camera production in a sports setting. Previously developed video production skills will be refined, and students will gain increased competency and sophistication in all areas of sports field production including: production planning, camera operations, lighting, sound, and digital non-linear editing. Designed to prepare students to effectively function in the industry as a member of a professional field production team. In field situations, students create, produce, shoot, and edit sports content.

Prerequisite(s): COM 131.

COM 371 Sports Feature Writing 3 Credits

Focuses on developing reporting and writing skills for newspaper, magazine, public relations, and free-lance nonfiction sports writing. Students will study published examples of outstanding sports feature writing, and write their own sports feature articles with social media and multimedia components. Instead of traditional game coverage, this course focuses on covering sports personalities, issues and themes.

Prerequisite(s): COM 102, COM 270.

COM 380 Television Production Practicum 3 Credits

Provides a workshop dedicated to the planning and creation of professional caliber television content for the campus television network and beyond. This course will provide an opportunity for students to develop writing, graphic, audio, video design and production skills in an experiential setting. Students will create materials to be used by the Rider University Network and for broadcast, cable and Internet distribution. Students can be involved in any and all phases of creating content from project conception through implementation. Students will gain valuable experience with, a greater appreciation for, and increased competency in creating professional media content. This class will also prepare students to more effectively function in the communication industry as an effective member of a professional production team. Since topics will vary by semester and instructor, this course may be repeated once.

Prerequisite(s): permission of instructor.

COM 390 Communication and Society 3 Credits

Examines in a topical manner the influence of communication upon significant issues and movements affecting people and society. Investigates interpersonal and mass media factors as they relate to a major issue such as changing sex roles, radicalism, racism, evangelism, election campaigns, and technology. May be taken more than once with different emphasis.

COM 391 Communication Criticism 3 Credits

Investigates and analyzes various methods of communication criticism and their applications to the understanding and evaluation of public and media discourses. Introduces theories and perspectives to assist in the analysis of those discourses. Methods include Aristotelean, Burkean, and ideological criticism.

COM 392 Media History: Personalities and Trend 3 Credits

Presents in a topical manner the history of the media from various perspectives, seeking to place the material into a meaningful economic, cultural, political, and/or social context. Different issues and related individuals are examined, such as the golden age of radio, motion picture economics, and media empire builders, with a view toward understanding their significant impact on the development and functioning of the media today. This course may be taken more than once with a different emphasis.

COM 393 International Communication 3 Credits

Examines mass media systems and their influence on international communication. Emphasizes media systems of major political powers such as Russia, China, the European community, the United States, and geo-political centers such as Africa, Asia, the Middle East, and Latin America. Using a seminar format, the course explores how a nation's mass media reflect its socio-political environment and national values. Focuses on the international images constructed by the mass media. Note: This course is crosslisted as GLS 393. Students may not get credit for both COM 393 and GLS 393.

COM 399 The Co-Operative Experience 3-12 Credits

This course provides a significant work experience to support the professional development of the student and complement theoretical and classroom learning. Students will be assessed based on measures as defined in a placement contract mutually agreed upon by the sponsoring faculty member, the organization representative of the placement site, and the student. Approximately 360 hours of work will be required as students work typically four days per week over at least eight weeks. The proposed placement contract requires departmental approval and the approval of the appropriate office of the dean. It is expected that the Co-op program consume the student's academic load for the semester. Final placement will be determined by the organization where the student will work. Rider University does not guarantee that every student applying for a co-op will earn a co-op placement. Contact the appropriate department for additional information. Prerequisite(s): junior standing and 2.75 GPA at the time of registration; Pass/fail.

Corequisite(s): IND 398 The Co-operative Experience Seminar, IND 398 and (dept) 399 combined cannot exceed 15 credits.

COM 400 Senior Seminar Communication 3 Credits

Provides students with the opportunity to explore critical issues in communication and journalism in a dynamic and engaging context. Students conceptualize problems, develop hypotheses, review literature, design appropriate techniques of inquiry, conduct their research, and present their findings orally to the seminar and in writing to the instructor. Senior journalism and communication majors only.

COM 402 Directing for Film 3 Credits

This course approaches directing both creatively and critically, and examines the role and importance of the director to the filmmaking process. The transformation of the written script into a film is explored through readings, viewing and analyzing the films of accomplished directors. Lectures and exercises illustrated with film clips and readings emphasize plot development, script analysis, developing storyboards and shot lists, rehearsal, blocking, collaborating with talent and production crew, and using the camera to effectively capture action and performance. Students will gain an effective understanding of the role of the director through the various stages of film production, and be provided the opportunity to demonstrate and cultivate his/her effectiveness as a director through individual and group assignments.

Prerequisite(s): COM 235 and COM 338.

COM 415 In-Depth Reporting 3 Credits

Utilizes advanced tools and techniques of contemporary in-depth reporting for print and multimedia. Covering multifaceted stories, students will learn how to do balanced multi-sourced field reporting and writing using primary and secondary sources including human sources, electronic documents and databases, both online and offline. Emphasis will be placed on writing stories that answer not only who, what, when and where questions but also the why, the how and the "so what?" questions. Students will also be exposed to some of the best investigative work of journalists past and present as models for analysis and discussion.

Prerequisite(s): COM 210.

COM 431 Adv TV Research & Production 3 Credits

Explores the theoretical and practical application of aesthetic technique in modern television/video production situations. While the prerequisite courses emphasized competency in equipment operations and basic production skills, this course moves to a higher platform by emphasizing concepts of production and how to apply them for effective communication. Thus this course places emphasis on advanced techniques: design and aesthetics as applied to enhance the overall video presentation as practiced in both the commercial and organizational communication arenas. In the current state of the art of video production, a mastery of aesthetic skills is necessary for the effective expression of ideas in optimal fashion and for a variety of audiences. Students will be exposed to as many techniques as practical through class discussion (including heavy participation by the student), individual and group lab activities and contact when possible with current practitioners and equipment. As most television production is done for a client, that process will form the basis for much of the course discussion and activities including projects.

COM 434 Advanced Radio Production 3 Credits

Provides in-depth study of advanced techniques in audio recording and radio programming and production. Individual and group production of short and long-form radio projects including: promotional spots, features, music programming, and news. Students will be involved in all phases of programming and production for radio including: project conception, development, management, and implementation. Selected student projects will air on the student radio station, 107.7 The Bronc.

Prerequisite(s): COM 234.

COM 435 Advanced Digital Filmmaking 3 Credits

This is an intensive hands-on course in advanced digital filmmaking. Students will gain experience with and proficiencies in a number of filmmaking areas including: creativity, production planning, aesthetics, scripting, script breakdown, camera movement, selecting and directing talent, creating scenes and sequences, visualizing action, establishing mood and conflict, as well as advanced lighting, sound and digital editing techniques. The students' use of high definition digital imaging systems as a medium for narrative cinematography will be developed and refined. In addition, students will explore how filmmaking techniques and technology can impact the visual story telling process. While often working cooperatively in groups, modeling the interdependent structure of film crews today, the creative and leadership role of the director in the contemporary film industry will be emphasized. Throughout the class, there will be an important integration of theory and practice which will enable students to produce meaningful film projects that will not only be technically effective, but strong in content and context as well.

COM 440 Cases & Campaigns in PR 3 Credits

Critically analyzes public relations case problems in industry, labor, education, government, social welfare, and trade associations. Emphasizes problem solving through the use of communication theories, public relations techniques, creative thinking, and the development of professional goals and standards. Employs realistic simulation exercises and actual case studies to develop and critique students' ability to demonstrate this knowledge in professional situations.

Prerequisite(s): COM 341 or permission of instructor.

COM 452 Seminar in Communication Studies 3 Credits

Offers an in-depth investigation of relational communication. Students explore the many complexities involved in human interaction and interpersonal dynamics. Social and psychological implications of various communicative relationships ranging from cross-gender communication to dysfunctional family systems to intercultural interactions are included.

Prerequisite(s): COM 348, COM 350, or permission of instructor.

COM 460 Web Design III 3 Credits

Builds on previous courses to refine students' understanding of theories and procedures of digital media development. Further develops Web site creation and project management theories. Students develop advanced Web creation techniques, including responsible site production.

Prerequisite(s): COM 364.

COM 462 Advanced Graphic Design and Portfolio 3 Credits

Explores the processes of graphic design by creating independent and creative solutions to a series of design problems. Students expand their proficiency in all aspects of the design process, including creative brainstorming, conceptualizing, critical thinking and presentation.

Students take a design project to both print and digital formats using Photoshop, Illustrator, and InDesign. Students develop and present a balanced portfolio as the culmination of their experience in the course.

Prerequisite(s): ART 103, ART 105, COM 262, and COM 360.

COM 470 Live Sports Reporting Capstone 3 Credits

Focuses on student production of live, professional-level sports media content. Students will combine reporting, writing, social media and multimedia from live sporting events. Live-coverage will include Rider University teams and regional or professional sporting events. The course is open to senior Sports Media Majors, or with the permission of the instructor.

Prerequisite(s): COM 370, COM 371.

COM 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

COM 491 Internship in Communication 1-4 Credits

Places qualified students in a professional area related directly to their communication training. Students may intern in a communication position with a corporation, small business, media outlet, public relations agency, non-profit organization, political party, sports organization, or other similar organizations. A minimum of 50 hours of internship per credit is required. Written reports, a final project, and supervisor evaluations are used to analyze and evaluate the experience. For students majoring in the Department of Communication and Journalism only, primarily juniors and seniors. No more than two internships are permitted for each student; exceptions may be made. The deadline for registration is the first Friday of the semester.

Prerequisite(s): 3.2 GPA and permission of instructor.

Health Communication

Program Overview

There is an increasing need for greater awareness and knowledge of health communication. Healthcare reform, end-of-life care, and pharmaceutical marketing are just a few of the issues facing the nation that are dependent upon the ability to engage in productive, meaningful health communication. Effective health communication can directly impact local communities and personal lives. The individuals who participate in healthcare delivery, such as nurses, patient advocates, family members, health administrators, and physicians, are increasingly being asked to communicate and collaborate more efficiently with colleagues, exchange information with patients, and address multiple audiences about healthcare.

A **minor in health communication** allows students to analyze different health contexts and accommodate increasingly diverse populations. Students can also learn about a symbiotic patient-provider relationship and the impact of technology in healthcare.

The health communication minor includes a curriculum of theory, research and application, focusing on health issues in the interpersonal, organizational, public, and mass-mediated contexts. The study of health communication can contribute to health promotion in areas such as patient-family communication, public health messages and campaigns, health in mass media, public health, and technology and health. This minor is designed to be a program for students from a wide variety of majors who may seek careers within health fields.

Note: Communication and Journalism majors may declare only one minor in the department. No more than two courses may be used to meet the requirements for both a major and a minor in the department.

Exception: If a student elects either the Advertising or Event Planning and Production minor, then three courses may be used to meet the requirements for both the major and that minor in the department.

Coures and Descriptions

BIO 206 The Pharmaceutical Industry 3 Credits

An introduction to drug discovery and development. Topics include how drugs are used to diagnose, cure, treat, and prevent disease and how drugs affect body function. The origins of diseases and the early attempts at treatment are also covered. Designed for business majors; does not satisfy requirements for the biology major.

Prerequisite(s): BIO 100 or BIO 101 or BIO 106 or BIO 108 or BNS 107 or CHE 115.

BIO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

BIO 491 Internship in Biology 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations. These can include educational or research institutions. The method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and should include keeping a journal of activities, a term paper or project report and a poster presentation. 2.5 GPA required.

Prerequisite(s): Permission of the instructor.

COM 251 Interpersonal Communication 3 Credits

Focuses on the study of various communication concepts and theories and the development of interpersonal skills and sensitivities. More specifically, students will participate in lectures, exercises, and projects while exploring the role and function of relationships in their professional, social, and personal lives.

COM 254 Intro to Health Communication 3 Credits

Health communication has been shown to have a positive impact on a number of facets of the medical visit, including patient outcomes, patient satisfaction, and job performance and satisfaction. This course will provide students with tools to implement health communication practices in a healthcare setting in order to improve these areas. In addition, health communication is particularly useful in cross-cultural situations, both in regard to the patient-provider relationship, when the ethnicities of the two parties may be different, and when cultural beliefs may impact a patient's medical wishes. Part of the tools for implementing health communication into the practice setting includes an understanding of the role that culture can play in healthcare and the development of strategies to provide optimal medical care while also respecting cultural intricacies.

COM 312 Spe Topics in Jour Writing 3 Credits

Provides students with the opportunity to explore specialized topics in journalistic reporting and writing. Each course will focus on a specific area in the broad field of journalism. Examples include business reporting, health reporting, and sports reporting.

Prerequisite(s): COM 102 or COM 107.

COM 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

COM 491 Internship in Communication 1-4 Credits

Places qualified students in a professional area related directly to their communication training. Students may intern in a communication position with a corporation, small business, media outlet, public relations agency, non-profit organization, political party, sports organization, or other similar organizations. A minimum of 50 hours of internship per credit is required. Written reports, a final project, and supervisor evaluations are used to analyze and evaluate the experience. For students majoring in the Department of Communication and Journalism only, primarily juniors and seniors. No more than two internships are permitted for each student; exceptions may be made. The deadline for registration is the first Friday of the semester.

Prerequisite(s): 3.2 GPA and permission of instructor.

GLS 325 Global Persptvs Hlth & Illness 3 Credits

Explores the different international perspectives on health and illness. Themes include how men, women, and children in respective civilizations are treated and viewed within their communities or nations, as they become ill. Particular attention is given to the contrast between various types of traditional healing and Western medical practices, and their interactions. Discussions will also compare the usefulness of national versus international health agencies in dealing with global health problems.

HTH 205 Introduction to Health Care 3 Credits

This course is an introduction to the components of the health care industry in the United States and to the interactions of these components in producing and supplying health care. We examine the nature of health, and the various institutions and personnel which seek to provide health services; we explore the means by which we pay for these services; we assess the relationship of technology to provision of health care services; we study the various ways that our government interacts with the providers of health care services; we investigate the ethical implications of issues in health care; and we explore health care sectors from an international perspective.

HTH 215 Population Healthcare Management 3 Credits

In this course, we study how disease is distributed in populations and of the factors that influence or determine this distribution. This course introduces the basic methods and tools epidemiologists use to study the origin and control of non-communicable and communicable diseases so that policies and mechanisms to enhance the health of populations can be developed.

Prerequisite(s): MSD 201 or MTH 120 or ENV 200 or PSY 201.

HTH 315 Healthcare Law,ethics & Policy 3 Credits

This course analyzes the role of the law in promoting the quality of health care, organizing the delivery of health care, assuring adequate access to health care, and protecting the rights of those who are provided care within the health care system. It will also examine the public policy, economic, and ethical issues raised by the health care system.

HTH 336 Economics of Health Care Sys 3 Credits

This course presents ways in which economic analysis can be used to explain issues in the health care industry. Microeconomics tools will be used to describe the behavior of consumers, producers, and third parties of the health care sector. The course also investigates the role of government in regulating the health care sector, and in providing services to the poor and elderly. Finally, we will use this foundation to examine some recent changes in this industry, and to analyze the most recent proposals for further changes.

MKT 380 Healthcare Marketing 3 Credits

The purpose of this course is to introduce students to the role, functions and tasks of healthcare marketing. Attention is devoted to applying basic marketing principles to the healthcare sector. Marketing decision making and analysis will be emphasized through the use of cases and current readings that focus on a variety of healthcare organizations, including hospitals, assisted living facilities, MCOs, and pharmaceutical companies.

Prerequisite(s): MKT 200 or permission of instructor.

Health Sciences B.S.

Program Overview

Rider's Health Sciences major educates the next generation of health professions by providing students with a foundation in the life sciences and other coursework that prepares them to join the workforce or attend professional or graduate schools in health-related fields. Rider achieves this through small class sizes, inquiry-based laboratory experiences, and faculty dedicated to the teacher-scholar model of science education. The major is designed to allow flexibility in its curriculum while providing a strong foundation for studies in allied health programs such as physical therapy, athletic training, occupational therapy, nursing, radiological science, optometry, podiatry, epidemiology and public health; graduate programs leading to advanced degrees in the life sciences; and for entry-

level positions in hospitals, health insurance, pharmaceutical sales, community health agencies and other related areas.

Curriculum Overview

The curriculum for Health Sciences majors is structured to prepare students for a life of learning in the sciences. Students are expected to master content, develop technical skills, analytical skills and competency in oral and written communication. Foundational courses in biology, chemistry, mathematics and psychology prepare students for the rigor of upper-level science and math courses, complemented by a broad base of health-related coursework in other disciplines. Capstone experiences allow students to explore one area of the life sciences in depth through exploration of internships and seminars, in addition to opportunities to engage in independent research with Rider's science faculty.

Honors Programs

Honors in Biology

The objective of the honors program in biology is to introduce talented undergraduate majors to the methods of basic research in the biological sciences. For consideration a student must have a 3.25 average at the end of their junior year. In the senior year, participating students must complete an independent research project and present a written honors thesis. At graduation a student who has a 3.25 cumulative average, a 3.5 average in biology courses, and who has completed an acceptable honors thesis will be awarded Honors in Biology.

Beta Beta Beta Biological Honor Society

"Tri-Beta" is a national honor society affiliated with the American Association for Advancement of Science and the American Institute of Biological Sciences. Invitations for membership are extended to majors in the life sciences who have demonstrated superior academic achievement. Students are usually invited to join in their sophomore year when they have accumulated 12 credits in the sciences. Active membership is available to those with an overall grade point average of at least 2.8, and at least 3.0 in their science courses. The benefits of membership include academic recognition; a subscription to the journal *Bios*, to which members may submit research articles; opportunities to present papers at conventions; and research awards. Biology and behavioral neuroscience majors should make membership in *Tri-Beta* one of their goals.

CHE 120 & CHE 121	Principles of Chemistry and Principles of Chemistry Lab	4
CHE 122 & CHE 123	Intro to Chemical Systems and Quantitative Methods Lab	4

Mathematics

MTH 105	Algebra and Trigonometry	4
BNS 250 & 250L	Biostatistics and Biostatistics Lab	4-6
or PSY 105 & PSY 201	Introduction to Research in Psychology and Statistics and Research Design	

Psychology

PSY 100	Introduction to Psychology	3
PSY 345	Health Psychology	3

Category 1 Electives (Select at least two)

BCH 225 & 225L	Introduction to Organic and Biochemistry and Intro to Organic & Biochem Lab	6-8
PHY 100 & 100L	Principles of Physics I and Principles of Physics I Lab	
or PHY 200 & 200L	General Physics I and General Physics I Lab	
PHY 101 & 101L	Principles of Physics II and Principles of Physics II Lab	
or PHY 201 & 201L	General Physics II and General Physics II Lab	
BIO 206	The Pharmaceutical Industry	

CHE 211 & 211L	Organic Chemistry I and Organic Chem I Lab	
CHE 214 & 214L	Organic Chemistry II and Organic Chemistry II Lab	
PSY 220	Abnormal Psychology	
PSY 230	Child Development	
PSY 231	Youth and Adolescent Development	

Category 2 Electives (Select at least two)

BIO 260 & 260L	Principles of Biology: Evolution, Diversity, and Biology of Cells and Principle of Biology: Cells Lab	8
BIO 265 & 265L	Genetics and Genetics Lab	
BIO 300 & 300L	Developmental Biology and Developmental Biology Lab	
BIO 305 & 305L	Vertebrate Physiology and Vertebrate Physiology Lab	
BIO 315 & 315L	Medical Microbiology and Microbiology Lab	
BIO 370 & 370L	Immunology and Immunology Lab	
BNS 310 & 310L	Neurobiology and Neurobiology Lab	
BNS 360 & 360L	Neurochemistry and Neurochemistry Lab	

Category 3 Electives (Select at least three)

HSC 100	Intro to Human Nutrition	9
HSC 200	Environmental Health&Human Heal	
SOC 101	Sociological Imagination (also satisfies LAS core)	
HTH 205	Introduction to Health Care	
HTH 215	Population Healthcare Management	
SOC 346	Health Care and Society	
GLS 325	Global Persptvs Hlth & Illness	
or NUR 407	Cultural Diversity in a Global Society	
PHL 304	Medical Ethics (also satisfies LAS core)	
or BHP 309	Honors Seminar: Genetic Engineering and the Philosophy of Science	
BIO 105	Life Science and Society	

Senior Capstone

HSC 490 Seminar Capstone in Health Sciences OR HSC 491 Internship	3
---	---

Total Credits 64-68

Department of Biology Course Repeat Policy

The following guidelines apply to courses offered by the Department of Biology. Students may repeat any biology (BIO), behavioral neuroscience (BNS) or health science (HSC) course once without special permission. A course will be considered repeated if the student has previously earned a letter grade in the course, or if the student has previously withdrawn from the course during Withdrawal II or Withdrawal III. If a student wishes to retake a biology or behavioral neuroscience course a third time, written permission must be obtained from the departmental chair before the registrar will allow the student to enroll in that course.

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who

change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Notes:

1. For course placement information see <http://www.rider.edu/offices-services/orientation/course-placement>
2. Please note that elective credits may be used to complete requirements in a second major or minor.
3. Natural and Physical Science Core requirements included in major.

HSC 100 Intro to Human Nutrition 3 Credits

This course is designed to offer the student understanding of fundamental human nutrition concepts including, but not limited to, digestion, absorption, metabolism, functions and sources of macronutrients and micronutrients. The theme of the course will align with human health and disease states and the important conceptions about the food industry and its relation to healthy dietetic choices.

HSC 200 Environmental Health&Human Heal 3 Credits

The health of any individual is a function of both our genetics and environmental factors. Environmental factors most broadly defined include the air we breathe, the water we drink and the food we eat. This course will focus on numerous examples of how bacteria, viruses, and exposure to environmental chemicals result in human diseases. Examples range from failures in public health infrastructure (cholera, diphtheria, river blindness, etc), failures to vaccinate (polio, measles, hepatitis, etc) and chemical exposures (birth defects, cancer, etc). There is also much known about how diet and nutrition can prevent diseases. **Prerequisite(s):** BIO 10X Life Science course or any biology laboratory course (BIO 115, 116 or 117).

HSC 490 Independent Research and Study 1-4 Credits

Immerses the student in health science-related research. The student learns to organize material, use relevant medical/scientific literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

HSC 491 Internship in Health Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations. These can include educational or research institutions. The method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty member and should include keeping a journal of activities, a term paper or project report and an oral or poster presentation.

Prerequisite(s): 2.5 GPA required.

History

History allows us to understand ourselves and others and our shared world by exploring and analyzing the entire range of human experience. The study of history encompasses both the study of the record of the past and the discipline of investigating and interpreting the past. It develops critical habits of mind, provides training in the analysis and synthesis of evidence, and hones skills in effective communication both orally and in writing. The history major is an excellent preparation for careers in law, government, journalism, business, and the non-profit sector, as well as in public history and education at all levels. For more on jobs for history majors, consult the American Historical Association at: <https://www.historians.org/jobs-and-professional-development/career-resources/careers-for-history-majors>

Curriculum Overview

Rider University history students complete an innovative program that exposes them to the history of major world cultures as well as the United States. Students take seminars in their first semester, in their fourth or fifth semester, and in their senior year. Each seminar is capped at 16 students in order to foster deep personal engagement of students and faculty and to allow for individual development of analytical, research, and writing skills. For the senior capstone, students produce a substantial work of original research in the senior seminar or in an Independent Study with a faculty mentor. Students also select from a range of topical courses drawing on faculty expertise in the history of Latin America and the Caribbean, East Asia, South Asia and the Middle East, classical, medieval, early modern and modern Europe, and Africa, as well as colonial America and the history of the United States in all periods. In addition, the department offers clusters of courses on women’s history and the history of gender and sexuality, and on environmental history. Students can also explore history outside of the classroom through our internship program, which allows them to earn course credit while working in archives, museums, and historic sites.

History Major Requirements

(36-39 credits)

Core Requirements		42-43
See LAS Core Page (p. 454)		
Category I: History Seminars		
Select 6-9 credits from the following:		6-9
HIS 160	Seminar in History ¹	
HIS 260	Craft of History (may be repeated for Category III credit on different topics)	
HIS 460	Research Seminar	
or HIS 490	Independent Research and Study	
Category II: US and European Surveys		
Select at least one course in US and one in European history.		6-9
Education students are strongly encouraged to take both US surveys as well as one European survey.		
HIS 180	U.S. History I	
or HIS 181	U.S. History II	
HIS 190	Europe To 1715	
or HIS 191	Europe Since 1715	
Category III: History Electives		
Select seven History electives, of which at least two must be at the 200 level and two at the 300 level. At least two courses from Category III must be selected from the following Diversity courses:		21
HIS 200	Native American History	
HIS 201	African American History	
HIS 249	Women in Europe from Antiquity to the French Revolution	
HIS 273	Imperial Russia	
HIS 274	Modern Russia	
HIS 280	Vietnam in Peace and War	
HIS 281	Modern Middle East	
HIS 282	Colonial Latin America	
HIS 283	Modern Latin America	
HIS 284	Caribbean History	
HIS 286	Modern East Asia	
HIS 288	African History	
HIS 289	History of Modern Japan	
HIS 309	Women in American History	
HIS 319	Gender and Sexuality in American History	
HIS 341	China in Revolution	
HIS 342	Women in East Asia	
HIS 343	Ottoman Empire and the Balkans	
Category IV		

Students who took six credits in Category IV should select three credits at any level	0-3
Total Credits	75-82

¹ Students who declare the history major after the freshman year should consult their advisor on the suitability of this course for their program.

History Minor Requirements

(21 credits)

Select seven courses in History, including three at the introductory level (150-199) and four at the intermediate to advanced level (200-491).

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

² Program must include at least two courses at the 200 level and at least two at the 300 level. At least two courses must be Diversity courses.

³ Please note that elective credits may be used to complete requirements in a second major or minor.

Courses and Descriptions

HIS 150 World History to 1500 3 Credits

A survey of people and their cultures, focusing on the two major historical traditions (Western and East Asian) from pre-history to the moment when they merged into a single strand, during the century 1550 to 1650. The varying political events, institutions, technologies, and cultures of the East and West are highlighted.

HIS 151 World History Since 1500 3 Credits

Major developments in world history from the 16th century on are considered, with an emphasis on the impact of ideas and influences from Asia and the New World upon European culture and society and the European impact upon Asia, Africa, and the Americas.

Prerequisite(s): HIS 150.

HIS 160 Seminar in History 3 Credits

This course introduces students to the discipline of history and to the skills needed for its pursuit. Students will learn to analyze and evaluate primary sources and to identify the thesis and argument of secondary sources, as well as to locate sources using library databases. They will complete a short research paper in which they put these skills into practice. The seminar is intended for History majors and minors and Social Studies majors in their freshman year. Transfer students with fewer than 45 credits should consult their advisor on the suitability of the course for their program. Enrollment limited to 16.

HIS 180 U.S. History I 3 Credits

A survey of American history from the early 17th century through 1877. Among the topics covered will be settlement and regional differences, the American Revolution and the formation of a national government by 1787. The beginning stages of industrialization, the rise of democratic and reform politics, westward expansion, the debate over slavery and growing sectional tensions through the Civil War and Reconstruction will be major themes in the 19th century. Included will be discussions of African Americans, Native Americans, and women.

HIS 181 U.S. History II 3 Credits

A survey of United States history from the end of the Civil War through the present. Included will be discussions of the maturing of an industrial economy, and expansion in the west and overseas. The role of the United States as a world power and the growth of presidential power will be shaped and sometimes challenged by movements designed to expand democratic institutions and human rights. Included will be discussions of African Americans, native Americans, and women.

HIS 190 Europe To 1715 3 Credits

Examines the development of European civilization from late Roman times until 1715, stressing the Classical heritage, the main currents of European thought and letters, the Renaissance and Reformation, the Age of Discoveries, and the development of the Old Regime.

HIS 191 Europe Since 1715 3 Credits

Examines major political, economic, social, and cultural developments in Europe and the West from 1715 to the present.

HIS 200 Native American History 3 Credits

Traces the experiences of North American Indians from early colonial times to the present day, demonstrating how Indian life has varied and changed throughout our nation's history. Topics include strategies of resistance and accommodation to colonial powers, 19th-century impacts of U.S. government removal and cultural assimilation policies, and 20th-century cultural and political developments among the nation's surviving tribes. Rather than "vanishing," American Indians are a vital and expanding force in modern America.

HIS 201 African American History 3 Credits

Examines the actions and thought of peoples of African ancestry in the United States. Briefly considers Africa before the Atlantic slave trade, then concentrates on major themes in African-American history--the slave trade, slavery, and the genesis of African American society, emancipation and its consequences, urbanization and industrialization, Black Nationalism, the Civil Rights Movement, and African Americans today. Emphasizes African Americans' dynamic and creative role both in shaping their society and establishing their place in United States society. The on-going struggle for freedom and equality provides thematic continuity for analyzing nearly 400 years of African-American history.

HIS 224 American Environmental History 3 Credits

Surveys the history of the North American environment from pre-Columbian times through the 20th century. Topics include Native American uses of the environment; the reshaping of ecosystems under European colonization; U.S. frontier expansion; the ecological impact of industrialization and urbanization; and the rise of the environmental movement.

HIS 225 A History of American Business 3 Credits

Examines the history of business in the United States from the Colonial Era to the present. Emphasizes such themes as the changing capitalist system, the function of business institutions, the roles of the entrepreneur, the relationship between government and business, and the emergence of the corporation.

HIS 226 History Of New Jersey 3 Credits

Explores the history of New Jersey from the colonial period to the present including the role of New Jersey in the American Revolution, the establishment of the Constitution, and the course of industrialization. Examines the impact of national and international developments on New Jersey and emphasizes the distinctive characteristics of the Garden State.

HIS 227 U.S. Cultural History I 3 Credits

Examines cultural developments in the United States through the Civil War. Topics include popular culture, the history of the body, reading and print culture, public celebrations and holidays, religion, race and ethnicity, and material culture. Some of the larger trends explored include the creation of American nationalism, the development of a consumer society, and the rise and decline of 19th-century family life and culture.

HIS 240 History of Ancient Greece 3 Credits

Surveys the intellectual and cultural life of ancient Greek civilization against the background of its political, economic, and social history.

HIS 241 History of Ancient Rome 3 Credits

Studies the history and culture of Rome, emphasizing such topics as Roman law, government, literature, religion, art, and philosophy.

HIS 243 Italy Middle Ages to Present 3 Credits

Traces the history of Italy from the Middle Ages to the present, stressing the connection between culture, religion, politics, and wealth in successive historical periods. Students participating in the two-week travel component at the end of the course may receive four credits.

HIS 245 Britain To 1688 3 Credits

British history from pre-Roman times to the Glorious Revolution is examined, emphasizing the growth of royal government, parliament, and the origins of the British colonial empire.

HIS 246 Modern Britain 3 Credits

Examines British history from the Glorious Revolution to the present, stressing the reform movements of the 18th and 19th centuries, the Pax Britannica, the Industrial Revolution, imperialism, and the impact of the two world wars.

HIS 248 History of Ireland 3 Credits

Beginning with an overview of the Irish past, focuses upon the past century of the island's history--the problems, challenges, and accommodations that led to the present situation as one of the most protracted unresolved partitions in the modern nation-state system.

HIS 249 Women in Europe from Antiquity to the French Revolution 3 Credits

Traces the history of women in Europe from Rome to the French Revolution, covering the religious, social, political, and economic context in which women participated. Also offers a brief overview of theories and issues in women's history and gender history.

HIS 255 History Abroad 3 Credits

Two-week travel course to a destination chosen by the professor. Exposes students to historic and cultural sites and works of art that have been studied in class. Students must attend orientation sessions, read assigned writings, complete a travel journal, write a final paper on a topic relevant to the course, and attend all scheduled course activities abroad. Travel will take place in January or at the end of the spring semester.

HIS 260 Craft of History 3 Credits

This seminar focuses on historiography and research skills to further students' progress toward the major capstone experience of conducting independent historical research. Students will explore how historians approach, interpret, and write about a particular topic selected by the instructor, and discover how and why interpretations and methods have changed over time. Topics will vary by instructor. Course may be taken a second time on a different topic for 200-level credit. The course is required for History majors who are Sophomores or Juniors. Enrollment limited to 16.

HIS 273 Imperial Russia 3 Credits

Discusses the political, economic, social and cultural developments in Russia and its borderlands during the Imperial period, that is to say the 18th and 19th centuries from Peter the Great to the Revolutions of 1917.

HIS 274 Modern Russia 3 Credits

Covers the background to the Russian revolutions of 1917, the revolutions themselves, and the evolution and dissolution of the Soviet regime. Cultural, social and economic aspects of this period receive as much attention as political aspects.

HIS 280 Vietnam in Peace and War 3 Credits

Examines the history of modern Vietnam, with a focus on the struggle for independence from the late 18th century to the present. Discusses the traditional culture, French colonialism and the development of Vietnamese nationalism, the Japanese occupation in WWII, and the struggle against France and the U.S. in the First and Second Indochinese Wars, as well as the postwar period. Explores the American experience in Vietnam and the impact of the war in the United States.

HIS 281 Modern Middle East 3 Credits

Examines political, economic, social, and cultural developments in the Near East, from the rise of the Ottoman Empire to the present, stressing the impact of contacts with the West in the 19th and 20th centuries, and the emergence of the contemporary Arab World, Israel, Turkey, and Iran.

HIS 282 Colonial Latin America 3 Credits

Examines the pre-Columbian and colonial periods of Latin-American history. Discusses the Indian, African, and European peoples and pays particular attention to the colonial Spanish and Portuguese societies from their establishment up to the revolutions that brought about political independence.

HIS 283 Modern Latin America 3 Credits

Considers the post-independence history of Latin America, emphasizing the rise of export economies and external economic domination, modernization, and pan-Americanism. Examines the changes undergone by Latin-American nations in the 20th century through an analysis of Mexico, Argentina, Chile, Brazil, Peru, Cuba, and Central America.

HIS 284 Caribbean History 3 Credits

Analyzes the history of the West Indian islands and the lands bordering the Caribbean Sea from pre-Columbian times to the present.

HIS 286 Modern East Asia 3 Credits

Examines the disintegration of the Ch'ing dynasty in China and the Tokugawa Shogunate in Japan under internal stresses and foreign incursions, and the varied experience of those states in coming to terms with the challenges of modernization and westernization. Covers political, economic, social, and cultural factors in China, Japan, and East Asia.

HIS 288 African History 3 Credits

Traces the history of Africa, analyzing the unique problems of African historical evidence and the complexity of the continent's past. Examines the genesis of African culture, early African societies, and the character of African civilizations and empires, then considers external influences such as religion (especially Islam and Christianity), contacts with Europe, the slave trade, the colonial scramble for Africa, colonial rule, modernization and dependency, and concludes by assessing the rise of independent Africa after World War II, its present status and future prospects.

HIS 289 History of Modern Japan 3 Credits

Examines the history of modern Japan from the age of the samurai in the Tokugawa Shogunate to today's high-tech mass consumer society. It traces the interaction of elements of Japan's traditional culture with impacts from the outside to create a uniquely-Japanese modernity. It stresses social, economic, and cultural trends, as well as political history, and includes an examination of modern Japanese culture through fiction and film.

HIS 298 Special Topics in History 3 Credits

Exploration of special topics, themes or methodologies in history. This course may be repeated for credit on different topics.

Prerequisite(s): permission of instructor.

HIS 300 Economic History of the U.S. 3 Credits

Studies the main currents in the economic growth of America from colonial times to the present. Stresses the process of economic development from an agrarian to an industrial society, and examines the challenges and dislocations resulting from economic change.

HIS 301 Constitutional History of U.S. 3 Credits

Surveys the English, Colonial, and Confederation backgrounds of American law and constitutionalism; the framing, adoption, and implementation of the Federal Constitution and its later development; the role of law in the nation's history; the changing interpretations of federalism; the growth of judicial review; and the increasing role of the Supreme Court.

HIS 302 American Worker: Social History 3 Credits

Investigates the American workers' varied social, cultural, religious, and ethnic environment from post-Civil War to the present. Emphasizes worker response to industrialization, urbanization, the technical revolution, and automation.

HIS 303 American Urban History 3 Credits

Traces the growth of urbanism in America from colonial times to the present. Focuses on the interaction between the city dweller and the urban environment and explores the problems confronting urban America today.

HIS 304 Civil War and Reconstruction 3 Credits

Considers the Civil War as a watershed in the development of the American republic. Analyzes antebellum sectional conflict, the war years, and the era of Reconstruction.

HIS 306 U.S. Cultural History II 3 Credits

Examines cultural developments in the United States from the late 19th century to the present. Topics include popular culture, intellectual history, gender history, literary history, film, institutions like museums and department stores, subcultures and counter-cultures, popular commemorations like World's Fairs, and political culture. Some of the larger trends explored include the development of the modern culture of consumption, the urban landscape, and the polarization of cultural values.

HIS 307 The Immigrant in American Life 3 Credits

Examines the experiences of immigrants in the United States, their assimilation, the reactions to them, and their contributions.

HIS 309 Women in American History 3 Credits

Examines the roles, status, and influence of women from the colonial era to the present. Studies the origins and development of feminism, including legal, political, educational, economic, and sexual rights; and studies social feminism, including reform movements in such fields as abolition, prohibition, pacifism, child labor, and social welfare.

HIS 318 The American Revolution 3 Credits

Examines the growing rift between the American colonies and the British Empire, the War for Independence, and the creation of a new American republic. Explores the political, economic, social and cultural history of the Revolutionary era, and includes the experiences of various groups such as Native Americans, slaves, and women.

HIS 319 Gender and Sexuality in American History 3 Credits

What makes a man, exactly, and what makes a woman? What kinds of sex are normal, and what kinds are abnormal? Who decides, and why? The answers to these questions are not fixed. Throughout American history, popular understandings of gender and sexual norms evolved in close relationship with the political, economic, racial, and social dictates of the time. This course will trace the evolution of ideas on sex and gender from the 18th century to the present using various historical sources including fiction and film, particular attention will be given to analyzing dominant models of proper behavior and the complex relationships of power enmeshed within them.

HIS 320 The History of Christianity 3 Credits

Examines Christianity's role in world history from the life and times of Jesus to the present. Emphasizes the quest for the historical Jesus, the emergence of Christianity after his death and triumph during the later Roman Empire, and Christian relations with pagans, Jews, heretics, witches and Muslims. Traces the various branches of Christianity, its spread throughout the world, church-state relations and responses to secularism, capitalism and communism.

HIS 325 Church & Society in Med Europe 3 Credits

Studies the role of the church in the shaping of early medieval society. Emphasizes the emergence of Christianity as a world force, its challenge from Islam, and the church's impact on the politics, thought, and economy of early medieval Europe.

HIS 326 Renaissance and Reformation 3 Credits

Studies the Renaissance, including the development of humanism and art as well as the political and economic changes of the period. Discusses the Renaissance church and movements for religious reform, leading to a consideration of the origins, development, and consequences of the Reformation. Examines the influence of the Renaissance and Reformation on the development of capitalism and the dynamic, secular nation-state.

HIS 333 20th-Century Europe 3 Credits

Studies the background and course of the two world wars, the related peace settlements, and their results, and the domestic and international politics as a way of understanding the contemporary scene. Emphasizes nationalism, power politics, collective security, imperialism, fascism, and communism in their economic, social, and intellectual context.

HIS 334 The Era of World War II 3 Credits

Investigates selected topics relating to the origins, events, and outcome of World War II, emphasizing the war's impact on 20th-century civilization. Traces the roots of the conflict back to the World War I peace settlements, and examines the rise of totalitarianism, pre-war aggression and appeasement, the immediate causes of the war's outbreak, the course of military actions, the diplomacy of the belligerents, the War's impact on civilian life, and factors that shaped the post-war world.

HIS 335 Nazi Germany & Hitler's Europe 3 Credits

Examines the Nazi dictatorship in all its complex dimensions, from the early life of Adolf Hitler to total war and genocide. Students will explore how the Nazi movement arose in the context of modern German and European history, and how the Nazis were able to win the support of significant segments of the German population. We will study the Nazis' massive project of social and biological engineering – pronatalism, forced sterilization, extermination of "social and biological deviants," and, ultimately, the genocide of the Jews. Through memoirs, state documents, and historical accounts, the class will examine life from the vantage point of perpetrators, accommodators, victims, and resisters.

HIS 336 Modern European Intell History 3 Credits

Examines the 17th-century revolution in scientific, philosophical, and political thought; the Enlightenment; Romanticism; the ideologies of Conservatism, Liberalism, and Socialism; Positivism; Darwinism; the crisis of European thought (1880-1914); and the major intellectual trends of the 20th century.

HIS 337 Post-1945 United States History 3 Credits

This course will magnify American society, politics, culture, and foreign policy from 1945 to the present, tracing the rise and fall of the "American Century". We will focus on topics such as the Red Scare, suburbanization, mass culture, the power of the presidency, the Civil Rights movement, Vietnam, disco, and the war on terror, offering students a unique opportunity to delve deeply into our recent past.

HIS 341 China in Revolution 3 Credits

Treats the Chinese Revolution in terms of political, economic, and social transformation.

HIS 342 Women in East Asia 3 Credits

Treats the history of the relationship between women and society in traditional East Asia and the modern transformation of their relationship.

HIS 343 Ottoman Empire and the Balkans 3 Credits

Covers the history of the southeastern projection of Europe, known as the Balkan Peninsula, from the late Ottoman era to the present. After a consideration of geography and methodology, it will examine the Ottoman Empire at its peak, as well as the sources of its decline. Then, trace the history of six Balkan peoples - Albanians, Bulgarians, Greeks, Romanians, Croatians, and Serbians, all of whom have historical roots of equal or greater antiquity than those of most western Europe peoples. Special focus will be devoted to Balkan nationalisms, both in theory and practice. The modernization of the agriculturally based societies of the Balkans and their respective states' formations are major subjects of comparative analysis. The course will study ethnic conflict, inter-state relations, the role of the great powers in the region, and the impact of the World Wars. Several meetings will be spent learning and discussing literature and film. Lastly, contemporary developments in the Balkans, especially the Yugoslav crisis of the 1990s, will be considered.

HIS 351 Warfare in History 3 Credits

Studies the evolution of international and intergroup conflict through the ages; principles, theories, and kinds of war; the great military practitioners and thinkers of world history. Briefly touches upon the American experience as a recent segment in world military and cultural history.

HIS 352 History of Socialism 3 Credits

Considers the historical development of socialist ideas and their adaptations from ancient times to the present, including ancient and Judaeo-Christian antecedents, Utopian Socialism, Marxism, Anarchism, Communism, and Democratic Socialism, emphasizing the historical comparisons among these schools.

HIS 353 Oral History 3 Credits

A study of the theory and practice of oral history. Involves an examination of the methodology and functions of oral history, the nature and character of oral evidence, and the place of oral testimony within the historical discipline.

HIS 398 Special Topics in History 3 Credits

Advanced exploration of special topics, themes or methodologies in history. This course may be repeated for credit on different topics.

Prerequisite(s): Permission of Instructor.

HIS 460 Research Seminar 3 Credits

Students produce a major research paper in this topical capstone seminar. Topics and themes vary by instructor. The seminar has a maximum enrollment of 16 students, so professors and students have an opportunity to work together closely over the course of a semester. Students may substitute with HIS 490: Independent Study.

Prerequisite(s): Senior standing and permission of instructor.

HIS 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation.

HIS 491 Internship in History 1-4 Credits

Internships to be offered each semester with such institutions as the New Jersey State Archives and the David Library of the American Revolution. Four credits may be taken for Category III History credit. Additional credits may be taken for Liberal Arts elective credit.

Homeland Security

Program Overview

Events of the past 30 years — including the first World Trade Center bombing in 1993, the terrorist attacks of September 11, 2001, and the Boston Marathon bombing in 2013 — have heightened America's awareness of terrorism and made homeland security a national focus. It is a subject, though, that has long been of concern to other countries around the world.

Open to all majors, this minor offers students the opportunity to add a focus in homeland security to their professional or academic plans. Homeland security is a rapidly growing field with a high demand for skilled professionals in both government and private industry.

This minor also is a valuable option for students whose careers would benefit from an understanding of such issues as risk assessment, world politics and civil liberties.

Degree Offered

¹ Depending upon eligibility and availability

Courses and Descriptions

HLS 100 Intro to American Politics 3 Credits

An examination of basic principles of the U.S. constitutional system; the operation of the democratic process; the organization, powers and procedures of Congress, the presidency and the federal judiciary; and the functions, services, and financing of the national government. Emphasis is on public issues, national priorities, and civil liberties. Note: This course is cross-listed as POL 100. Students may not get credit for both HLS 100 and POL 100.

HLS 202 The Pol. Sys - Theories/Theme 3 Credits

This course serves as a gateway to the subfields of comparative politics and international relations. The concept of the political system helps political scientists to organize political interrelations into patterns that allow systematic selection and interpretation of information and the study of processes and outcomes of politics in a variety of settings. The course introduces students to the main brands of normative theory prescribing the principles directing the operation of the political system, to some of the most important methods used to compare political systems and/or their components, and to the foremost approaches utilized in the study of the relations between political systems and their environments. Note: This course is cross-listed as POL 202. Students may not get credit for both HLS 202 and POL 202.

HLS 203 Homeland Security 3 Credits

The course is designed to help students increase their knowledge and understanding of homeland security policy. The course will consider why and how homeland security problems impact the public agenda, why some solutions are adopted and others rejected, and why some policies appear to succeed while others appear to fail. The course will primarily examine policy making at the national level in the United States, but will also analyze examples at the state and local level, as well as placing U.S. policy in a comparative perspective. Note: This course is cross-listed as POL 203. Students may not get credit for both HLS 203 and POL 203.

HLS 204 Development and Structure of the US Intelligence Community 3 Credits

This course provides a historical review of intelligence following World War II. It will examine the major functions of intelligence, as well as intelligence as a part of the foreign policy process: collection, analysis, counterintelligence, and covert action. Students will be introduced to a range of collection procedures: human, open source, electronic, photographic, and signal, with emphasis placed on interpreting and writing intelligence summaries. Note: This course is cross-listed as POL 204. Students may not get credit for both POL 204 and HLS 204.

HLS 219 Terrorism,Revolut & Polit Viol 3 Credits

Revolutions are the mad inspiration of history." Trotsky's characterization calls attention to three important dimensions of violent political participation: the historical settings, ideology, and emotional fervor of the practitioners. The course focuses on these dimensions by analyzing revolutionary and terrorist movements in the 20th century. Special attention is given to the use of violence in the post-Cold War new world disorder. Note: This course is cross-listed as POL 219 and GLS 219. Students may only get credit for one course: HLS 219, GLS 219 or POL 219.

HLS 220 Terrorism & Counter Terrorism 3 Credits

This course introduces students to the arguments about the definition of terrorism, the historical use of terrorism and the roles of ideology, religion, and psychological factors that help explain and predict it. The course seeks to identify the components of national security policy aimed at countering such elements and their cost, both in financial and civil right terms. Finally, to illuminate both the definition and the policies discussed, the course will offer brief comparisons with other states, especially Israel, the UK, and Russia.

HLS 270 Networking/Telecommunications 3 Credits

This course provides an introduction to business data communications and networking. The Internet and OSI models are discussed. Network technologies include local area networks, backbone, wide area networks, and the Internet. Introduction to network design, security, and network management are also provided.

Prerequisite(s): CIS 185.

HLS 300 U.S. Constitutional Law 3 Credits

The role of the Supreme Court in the American political system is assessed. Topics include the staffing and functioning of the Supreme Court and the federal judicial bureaucracy, the origins and development of judicial review, and the role of the Supreme Court in national policy-making. Note: This course is cross-listed as POL 300. Students may not get credit for both HLS 300 and POL 300.

HLS 301 Civil Liberties in the US 3 Credits

The American doctrine of civil liberties in theory and practice. Emphasis on analyzing the freedoms of speech, press, assembly, and religion, the right of privacy, and the problem of discrimination in the context of contemporary issues and problems. Particular attention to the role of the Supreme Court in this area. Note: This course is cross-listed as POL 301. Students may not get credit for both HLS 301 and POL 301.

HLS 304 Pol Behvr:Fear, Risk & Crisis 3 Credits

The course focuses on various analytical approaches in behavioral political science. It does so by advancing students' knowledge of the cognitive aspects of whether citizens engage in various types of political behavior-eg. voting/non-voting, the formation of political partisanship and ideology, issue perceptions, responding to risk and uncertainty in the political environment, and engaging in civic political participation. Note: This course is cross-listed as POL 304. Students may not get credit for both HLS 304 and POL 304.

HLS 314 Congress Power & Security Policy 3 Credits

The purpose of this course is for students to identify, examine, analyze, and interpret the role of Congress in shaping national security policy with a particular emphasis on the institution's role in the Global War on Terror. Particular attention is paid to the role of the US government being able to balance individual rights and liberties within the national security state. Last, the course also takes an in-depth analysis of the U.S. Congress, looking comparatively at how legislatures in other nations have dealt with crafting their own security policies. The course will address the following questions: First, what is the role of Congress in national security policy, what does it do, and why? Second, what are the various ways of studying the relationship between the legislative and executive branches of government in the US system as it relates to the Global War on Terror? Note: This course is cross-listed as POL 314. Students may not get credit for both HLS 314 and POL 314.

HLS 316 Pre. Power & Natl Security Pol 3 Credits

This course examines the development of the National Security State since the Second World War, and the ways in which it has affected, and been affected by, the Federal Executive. Topics to be covered will include the post-World War II redefinition of "national security", the Cold War (with a special focus upon war powers during Korea and Vietnam) and the changes that have occurred with the "War on Terror." Note: This course is cross-listed as POL 316. Students may not get credit for both POL 316 and HLS 316.

HLS 325 Public Administration 3 Credits

Public administration in modern society, emphasizing the administrative formulation of public policy and its implementation. Attention on who gets what, when, and how from the decisions of administrative units; the role administrators have in policy-making compared to elected legislators, chief executives and judges; the effect administrators have on the benefits citizens receive from government; and the effect administrators have on citizens' behavior. Note: This course is cross-listed as POL 325. Students may not get credit for both HLS 325 and POL 325.

HLS 346 Liberal Democracy in Times of Stress 3 Credits

This course inquires into historic and present day cases, ranging across Europe and the US, in which liberal democratic governments, under stress because of subversion, sabotage, invasion, rebellion, or the effects of economically caused chaos, take on emergency powers to become so-called "states of exception." While in some cases such states have imposed mild and limited emergency measures, others have employed more draconian measures, suspending, if not dissolving, constitutionally guaranteed civil liberties, often for indeterminate and protracted periods. How various states have behaved in emergency situations will be the major content of this course. Note: This course is cross-listed as POL 346. Students may not get credit for both HLS 346 and POL 346.

HLS 350 U.S. Foreign Policy and Security Policy 3 Credits

Principles, institutions, and processes involved in the formulation and implementation of policies regarding the nation's military, economic, and environmental security within the global framework. Strands, trends, and problem areas in U.S. foreign policy, with focus on the changing global environment of the post-Cold War world. Note: This course is cross-listed as POL 350. Students may not get credit for both HLS 350 and POL 350.

HLS 351 Critical Views of Global Security 3 Credits

This course will examine the foundations of international security. It will examine the concept of security from both the macro and micro level. We will discuss a mix of security strategies (balance of power, alliances, rearmament, collective security, deterrence), theoretical perspective on security (Neorealism, Neoliberalism, Critical Theory, Copenhagen School), great power and third world security, democratic and non-democratic security, classic threats (changes in relative power, proliferation) and new threats (environment, population movements, terrorism), and concepts of security ranging from state survival, to societal security, to unit level-variables such as Human Security. Note: This course is cross-listed as HLS 351. Students may not get credit for both HLS 351 and POL 351.

HLS 361 Courts, Judges and Politics 3 Credits

In-depth examination of the nature of judicial decision-making and the impact that judicial decisions have on society. Considers the sources of judicial authority, judicial fact-finding, statutory and constitutional interpretation, individual and collective processes of judicial decision-making, relations between judges and other government officials, and the political consequences of judicial decisions with particular emphasis on federal courts and judges. Note: This course is cross-listed as POL 361. Students may not get credit for both POL 361 and HLS 361.

HLS 363 Hum Rights in Global Context 3 Credits

Examines human rights – droits de l'homme, derechos humanos, Menschenrechte, "the rights of man" – are, literally, the rights that one has because one is human. What does it mean to have a right? How are being human and having rights related? This course provides an introduction to theory and global practice of human rights. Human rights claims play an increasingly central role in political and social struggles across the world. The adoption of the Universal Declaration of Human Rights in 1948 signaled a proliferation of international human rights law and transnational non-governmental activism. While the promotion of human rights has become global, adherence to those standards remains highly uneven and gross violations and atrocities continue to occur. Given the breadth and complexity of the human rights movement, including its engagement with law, politics and morals, in radically different cultures, this course is by its very nature multidisciplinary. Note: This course is cross-listed as HLS 363. Students may not get credit for both HLS 363 and POL 363.

HLS 420 Enterprise Security 3 Credits

Students will be provided with complete coverage of computer security in all forms including hardware, network, and software program security. Through hands-on labs, students will learn firsthand how enterprise systems can be comprised and how computer professionals can prevent and provide counterattacks for security intrusions.

Prerequisite(s): CIS 310 or permission of instructor.

HLS 491 Internship in NJ Homeland Secur 1-4 Credits

Students work under supervision in a public agency, political party, or public interest group. A minimum of 52 hours of field work per credit required, with regular reports and a concluding critique analyzing and evaluating the experience. Primarily for seniors and qualified juniors. No more than six credits allowed toward graduation.

Prerequisite(s): permission of instructor.

Integrated Sciences and Math

Program Overview

The Integrated Sciences and Math major (ISM) is designed primarily as a second major for students in the School of Education (p. 461) interested in teaching science or math at the middle school level. The

program is tailored to meet the New Jersey certification requirements for middle school science or math teachers and to facilitate the timely completion of the dual graduation requirements for education majors in the School of Education and the College of Liberal Arts and Sciences. This major is not designed to prepare students for further study in science or math disciplines at the graduate or professional level, or to teach science or math at the high school level. Students who may wish to teach science or math at the high school level should discuss the additional certification requirements needed with their School of Education academic advisor.

Curriculum Overview

The Integrated Sciences and Math major is truly interdisciplinary in nature, both in its curriculum and faculty who range from teacher education to biology, to chemistry, physics, earth sciences and mathematics. Students may choose from four different program concentrations, depending on their particular interest: Life Sciences, Physical Sciences, Earth Sciences or Mathematics. Coursework will vary depending on what concentration the student decides to take.

Honors Program in Integrated Sciences and Math

Graduation with honors in Integrated Sciences and Math is awarded in recognition of majors who have demonstrated outstanding academic ability. Enrollment in the program is by invitation of the faculty of the Department of Geological, Environmental, and Marine Sciences (GEMS). Eligibility requirements include a minimum GPA of 3.50 in courses required for the major and the satisfactory completion of a three- or four-credit Independent Research and Study. In addition, an honors candidate must maintain an overall minimum GPA of 3.00.

¹ MTH 211 and MTH 212 may be used to satisfy the concentration requirement only if not used to satisfy the Mathematics requirements above.

Academic Plans of Study

The following educational plans are provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider will follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

- **Physical Science Concentration** (p. 293)
- **Math Concentration** (p. 294)
- **Life Science Concentration** (p. 294)
- **Earth Science Concentration** (p. 295)

Physical Science Concentration

Note: Science and Math core requirements are included in the Major.

BIO 100 Life Science:Human Emphasis 3 Credits

An examination of mammalian physiology and development at the cellular and organ system level, with emphasis on physiological homeostasis in man. Three hours of lecture per week.

BIO 101 Life Science:Genetics Emphasis 3 Credits

An examination of cell biology and genetics, with emphasis on the impact of these fields on human affairs. Three hours of lecture per week.

BIO 103 Life Sci:Ecobotanical Emphasis 3 Credits

Plant biology with emphasis on ecological interactions and economic uses. Three hours of lecture per week.

BIO 105 Life Science and Society 3 Credits

This course will highlight current scientific knowledge and the state of ongoing inquiry in often-misunderstood topics related to health and medicine. Topics will include, but are not limited to, stem cells, embryo editing, vaccination, genetic modification of food and animals, and the process of drug development. Throughout this course, students will learn basic cell biology and genetics as a foundation for scientific understanding in itself as well as how to detect misconceptions and myths related to science, healthcare, and medicine.

BIO 106 Life Science:Human Disease 3 Credits

An introduction to molecular, cellular, and human biology with emphasis upon diseases and disorders caused by mutation, bacteria, viruses, or parasites. The biology of human aging is also discussed. Three hours of lecture per week.

BIO 108 Life Sci: Biol of Human Aging 3 Credits

An introduction to the biology of aging manifest in the cells, tissues, and organs of animals and humans. Three hours of lecture per week.

BIO 109 From the Big Bang to Origins of Life 3 Credits

This course is a non-major science core course focusing on the interactions among astronomy/physics, chemistry, geology and biology. A consensus story has emerged about our origins from scientific insights obtained over the last 400 years. Many know this story that began with the Big Bang and proceeded through the origin of the galaxies and the origin of the elements to the origin of our sun, earth and solar system. The origin of the earth gave rise to the origin of life, evolution of bacteria, viruses, plants and animals, creation of ecosystems and ultimately the evolution of humans. We will proceed through the science slowly. By doing so we can take the information from all of the sciences and reflect upon it. The result of will be an enhanced appreciation for both the process of science and the awesome information we have learned about the natural world as well as ourselves. The study of our origins reveals that humans, all life, and our planet are intimately related.

BIO 110 Life Science: Inquiry Approach 4 Credits

An introductory course for non-science majors in which students develop an understanding of biological evolution, the molecular basis of heredity, the cell, matter, energy and organization in living systems, and the interdependence of organisms. In addition, students will develop an understanding of science as a human endeavor, the nature of scientific knowledge, and historical perspectives. Through investigative activities, students will develop an understanding about scientific inquiry and develop abilities necessary to do scientific inquiry. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 110L.

BIO 110L Life Sci: Inquiry Approach Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 110.

BIO 115 Principles of Biology I 4 Credits

An introductory biology course focusing on major themes of biology: what is life?; Cells as fundamental structure and functional unit of life; information transmission, storage and retrieval; Diversity and unity of life explained by evolution. Three hours of lecture and one three- hour lab per week.

Corequisite(s): BIO 115L.

BIO 115L Principles of Biology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 115.

BIO 116 Principles of Biology II 4 Credits

An introductory biology course focusing on major themes of biology: Energy and matter to carry out life's essential functions; Interdependent relationships characterize biological systems (homeostasis, growth & development); Behavior of living things; Ecology and the environment. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 116L.

BIO 116L Principles of Biology II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 116.

BIO 206 The Pharmaceutical Industry 3 Credits

An introduction to drug discovery and development. Topics include how drugs are used to diagnose, cure, treat, and prevent disease and how drugs affect body function. The origins of diseases and the early attempts at treatment are also covered. Designed for business majors; does not satisfy requirements for the biology major.

Prerequisite(s): BIO 100 or BIO 101 or BIO 106 or BIO 108 or BNS 107 or CHE 115.

BIO 210 Hospital Intern Program 2 Credits

An internship that provides students with the experience in the practical aspects of medicine. Major departments in the hospital such as the emergency room, operating room, clinic, radiology, and the laboratory will be open for student rotations. Field trips to various medical schools in the area will provide information on professional school educational opportunities available in the health professions.

Prerequisite(s): sophomore standing or above and permission of instructor.

BIO 215 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): BIO 115/115L and BIO 116/116L.

Corequisite(s): BIO 215L.

BIO 215L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 215.

BIO 221 Human Anatomy & Physiology I 4 Credits

A comprehensive survey of the structure and function of musculo-skeletal systems, neuroendocrine systems and related tissues and cellular interactions. Physiological applications include homeostasis, muscle dynamics, and cell activities. Laboratory exercises complement lecture material through the use of animal dissections, wet labs, computer-assisted investigations, microscopy, and models. Exams, case histories, personal investigations, and lab practicums assess learning. Course emphasis supports allied health and pre-professional training. Three hours of lecture and one three-hour lab per week. Designed for allied health students; does not satisfy requirements for the biology major. **Prerequisite(s):** BIO 115.

Corequisite(s): BIO 221L.

BIO 221L Human Anatomy & Physiology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 221.

BIO 222 Human Anatomy & Physiology II 4 Credits

A comprehensive survey of the organ systems of the body including special senses, cardiovascular, respiratory, digestive, excretory, reproduction and development. Physiological components include electrolytes, metabolism, nutrition, and the mechanisms of homeostasis and cell reception. Lab studies support lecture material through dissections, wet labs, computer-assisted learning, microscopy, and models. Assessment includes lab practicums, exams, and reports. Course emphasis supports allied health and pre-professional training. Designed for allied health students; does not satisfy requirements for the biology major. **Prerequisite(s):** BIO 221.

Corequisite(s): BIO 222L.

BIO 222L Human Anatomy & Phys II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. **Prerequisite(s):** BIO 221L.

Corequisite(s): BIO 222.

BIO 260 Principles of Biology: Evolution, Diversity, and Biology of Cells 4 Credits

Lectures and labs focus on basic cell biology. Cell diversity and function, genetics and biotechnology are emphasized. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** BIO 115 & BIO 116.

Corequisite(s): BIO 260L.

BIO 260L Principle of Biology: Cells Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 260.

BIO 265 Genetics 4 Credits

A comprehensive course focusing on molecular, Mendelian, and population genetics. Topics covered will include molecular advances in the study of genetics, including genomics and bioinformatics; evolution and the effects of genetic mutations; the application of population genetics to forensic science; genetic problem solving, including genetic crosses and statistical analysis; and regulation of gene expression. The laboratory for this course will introduce students to commonly used genetic model organisms and basic molecular biology techniques. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** BIO 115, BIO 116.

Corequisite(s): BIO 265L.

BIO 265L Genetics Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 265.

BIO 272 Intro to Marine Biology 3 Credits

Introduces students to the study of marine environments, emphasizing the diversity, ecology, and physiology of marine animals, algae, and plants. Aspects of the human impact on marine environments are also discussed. Prerequisite(s): BIO 115 or BIO 116 or BNS 118 and grade of "C" or better.

Corequisite(s): BIO 272L.

BIO 272L Marine Biology Laboratory 1 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 272.

BIO 290 Special Topics in Biology 3 Credits**BIO 300 Developmental Biology 4 Credits**

Lectures and laboratories explore molecular, cellular, and genetic mechanisms of animal development. Aspects of gametogenesis, fertilization, induction, cytoplasmic determinants, morphogenetic movements, differentiation and developmental evolution are discussed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 300L.

BIO 300L Developmental Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 300.

BIO 305 Vertebrate Physiology 4 Credits

Study of the principles and mechanisms of mammalian physiology. Topics include the nervous system, muscle physiology, cardiovascular physiology, respiration, gastrointestinal activity, renal function, and endocrine physiology. Lectures and laboratory exercises emphasize homeostatic mechanisms and organ-system interactions. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 305L.

BIO 305L Vertebrate Physiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 305.

BIO 315 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116 or BNS 118, BIO 117.

Corequisite(s): BIO 315L.

BIO 315L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 315.

BIO 321 Microbiology 4 Credits

An introduction to the discipline of microbiology, with an emphasis on the biology of prokaryotes found in all the natural realms of our environment, including the oceans, soil, atmosphere, and extreme habitats. Emphasis will be placed on microbial diversity, fundamental microbial processes, and the continual interaction between microbes and the natural environment. Classical and modern methods of identification are introduced in the laboratory. Three hours of lecture and one three-hour lab per week. Some field trips are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 321L.

BIO 321L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 321.

BIO 335 Plant Biology 4 Credits

Biology of seed plants, including growth, development, and reproduction of flowering plants. Emphasis is placed on acclimation and adaptations demonstrating environmental influences on plant structure and function. Current literature involving molecular mechanisms of control will be discussed. Three hours of lecture and one three-hour lab per week. One Saturday field trip. Prerequisite(s): BIO 115, BIO 116, CHE 122.

Corequisite(s): BIO 335L.

BIO 335L Modern Plant Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 335.

BIO 340 Evolutionary Biology 4 Credits

Where did we come from? This course will explore the generation of biological diversity on earth. Course topics will include: the history of evolutionary thought; the different lines of evidence and fields of inquiry that bear on our understanding of evolution; selection vs. random changes in populations over time; speciation; extinction; the molecular basis of evolution; and evolutionary developmental biology. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265.

Corequisite(s): BIO 340L.

BIO 340L Evolutionary Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Corequisite(s): BIO 340.

BIO 350 General Ecology 4 Credits

An investigation of the processes that regulate the distribution of plants and animals throughout the biosphere. Relationships among species and their interactions with the environment are stressed. Quantitative analyses of experimental results and current research in basic and applied ecology are discussed. Laboratory activities explore conceptual models using both field activities and computer simulations. Three hours of lecture and one three-hour lab per week. One Saturday field trip (laboratory time will be adjusted accordingly). Prerequisite(s): Two of the following: ENV 100 with a grade of "B" or better; BIO 115, BIO 116, with a grade of "C" or better in each course.

Corequisite(s): BIO 350L.

BIO 350L General Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 350.

BIO 370 Immunology 4 Credits

An introduction to the cells and molecules of the immune system with emphasis on recent advances. Topics include AIDS, autoimmunity, transplantation, and cancer. Readings from current journals will be discussed and presented by students. The laboratory will introduce current research techniques and then apply these to a research problem with critical analyses of the data generated. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 370L.

BIO 370L Immunology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 370.

BIO 372 Behavior of Marine Organisms: Evolutionary Approach 4 Credits

An examination of the underlying mechanisms and evolutionary causes of behavior, including habitat use, feeding, and mate choice, particularly in marine organisms. The laboratory will involve collecting, analyzing and interpreting field data and performing experiments in the lab using a variety of marine organisms including fish and crabs. Three hours of lecture and one three-hour lab per week. Some full-day field trips (usually on a weekend) are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 372L.

BIO 372L Beh Mar Org: Evol Apprch Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 372.

BIO 400 Seminar in Cellular and Molecular Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in cell and molecular biology. Topics may include: genomics, regulation of gene expression, development, and molecular processes of disease. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116, BIO 260, junior standing, and permission of instructor.

BIO 416 Bioinformatics 3 Credits

A comprehensive overview of relevant computer-based technologies used in genome research, DNA sequence analysis, and evolutionary biology. Will focus extensively on Internet resources and predictive algorithm usage for determining evolutionary relationships of organisms based on molecular evidence. Lectures will focus on terms and concepts frequently used in genomic and bioinformatic research, while computer labs will allow students to perform hands-on projects with actual DNA sequence data.

Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265 (recommended); Junior standing or Permission of the Chairperson.

BIO 420 Seminar in Organismal Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in physiology and organismal biology. Topics may include hormonal control of behavior, immune pathogen interactions, and other aspects of whole animal and/or plant biology. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 450 Seminar in Ecology & Evolution 3 Credits

Critical analysis of the scientific literature pertaining to current topics in ecology and evolutionary biology. Ecology and evolution of terrestrial and aquatic systems may include scales of adaptation, mechanisms, or human impacts. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

BIO 491 Internship in Biology 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations. These can include educational or research institutions. The method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and should include keeping a journal of activities, a term paper or project report and a poster presentation. 2.5 GPA required.

Prerequisite(s): Permission of the instructor.

CHE 100 Intro to College Chemistry 3 Credits

Open to all students, but designed primarily for those who wish to major in a science which requires chemistry but whose chemistry background is not sufficient to allow entrance into Chemistry 120. It focuses on the nomenclature used in chemistry including the symbols used to designate the chemical elements, the construction of chemical formulas, and the writing and balancing of chemical equations. Other topics will include interpreting the Periodic Table, the valences of the elements, the mole concept, and simple stoichiometry. In addition, chemical calculations involving units, scientific notation, significant figures, and the algebraic manipulations of simple equations will be included. Three hours of lecture per week. This course does not satisfy the requirements for the biochemistry or chemistry degree, but does satisfy the core requirements for liberal arts, education and business majors.

CHE 115 Chem and Contemporary Society 3 Credits

Designed to give the nonscientist an appreciation of the role of chemistry in today's world. The approach is conceptual rather than mathematical. Topics include basic principles of chemical theory, energy sources, elementary organic chemistry, drugs, food additives, polymers, chemistry of living systems, inorganic solids in modern technology, and problems involving pollution of the environment. Three hours of lecture per week. This course satisfies the core requirements for liberal arts, education and business majors.

CHE 118 Exploration of Chemical Prin 4 Credits

A one-semester introduction to the principles of chemical sciences. Students will utilize inquiry-based learning methods to examine contextual problems as a means to explore introductory models and concepts of chemistry. Students will also gain an understanding of how scientific models are used to explain experimental observations. The laboratory component of this course is designed to provide students with an experimental context within which to develop some of the models described in the classroom. Three hours of lecture and one three-hour lab per week.

CHE 118L Explor Chemical Prin Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 118.

CHE 120 Principles of Chemistry 3 Credits

For students who have successfully completed one year of high school chemistry. This systematic study of the fundamental principles and concepts of chemistry covers atomic structure, bonding, stoichiometric relationships, including solution and oxidation-reduction reactions, and molecular structure. Three hours of lecture per week. Prerequisite(s): High school chemistry or CHE 100 is recommended before taking this course.

Corequisite(s): CHE 121.

CHE 121 Principles of Chemistry Lab 1 Credits

For students concurrently taking CHE 120. Experiments involve gravimetric, volumetric, and spectrophotometric quantitative analysis. One three-hour lab per week. Fall.

CHE 122 Intro to Chemical Systems 3 Credits

A continuation of CHE 120. For students majoring in the sciences but may be taken by others. Chemical systems in which the study of kinetics, thermodynamics, equilibrium, and radiochemistry are emphasized. Three hours of lecture per week. Prerequisite(s): CHE 120, MTH 105 or higher.

Corequisite(s): CHE 123.

CHE 123 Quantitative Methods Lab 1 Credits

Usually taken concurrently with CHE 122. Primarily for students majoring in the sciences. A number of quantitative classical and instrumental methods of analysis are used to determine thermodynamic properties and reaction mechanisms. One three-hour lab per week. Prerequisite(s): CHE 121.

Corequisite(s): CHE 122.

CHE 211 Organic Chemistry I 4 Credits

The structure, chemical properties, and methods of preparation of the more important classes of carbon compounds are studied, with an emphasis on the relationship of structure, stereochemistry, and conformation to chemical reactivity. The preparation and reactivity of organic functional groups is introduced. The use of infrared and nuclear magnetic resonance spectroscopy, and mass spectrometry for elucidating structures of organic molecules is discussed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 122, CHE 123.

Corequisite(s): CHE 211L.

CHE 211L Organic Chem I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 211.

CHE 214 Organic Chemistry II 4 Credits

A continuation of Chemistry 211, emphasizing the mechanism of organic reactions, structural interpretations of properties, preparations, reactivity and identification of organic compounds. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 211.

Corequisite(s): CHE 214L.

CHE 214L Organic Chemistry II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 214.

CHE 250 Quantitative Analysis and Statistics Methods 4 Credits

This course will provide a deeper exploration of topics in chemistry that are steeped in numerical analysis. These topics include advanced analysis of equilibrium systems, acid-base systems and electrochemical systems. Additional detail will be given to methods of chemical measurement, statistical methods of data analysis and determination of data validity and reliability. Both lecture and laboratory will show an emphasis on using computer-based tools to analyze experimental data. Three hours of lecture and one three-hour lab per week. Prerequisite(s): CHE 122, CHE 123, MTH 210.

Corequisite(s): CHE 250L.

CHE 250L Quantitative Analysis and Statistical Methods Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 250.

CHE 305 Physical Chemistry I 3 Credits

The mathematic and conceptual foundations of physical chemistry will be introduced with an over-arching theme of determination of energy allocation within atomic and molecular systems. Topics will include determination and measurement of energy states in atoms and molecules, simple quantum mechanical systems, distribution of energies and the connection to thermodynamic quantities, the three laws of thermodynamics, spontaneity, equilibrium and experimental kinetics.

Prerequisite(s): CHE 214, MTH 211, PHY 201.

CHE 306 Physical Chemistry II 3 Credits

Physical chemistry concepts are explored in more detail with emphasis on examination of systems that require multiple models in physical chemistry to explain. Topics will include, kinetic theory and transition state theory, statistical mechanics and its connections to thermodynamic functions, temperature dependence of spontaneity and equilibrium, the thermodynamics of condensed phases and multi-component equilibria, electrochemistry, multi-electron quantum mechanical systems, approximations in quantum mechanics, symmetry and advanced molecular spectroscopy.

Prerequisite(s): CHE 305, MTH 212.

CHE 315 Inorganic Chemistry 3 Credits

The periodic table as a tool for predicting the physical and chemical properties of chemical systems is developed and examined in conjunction with various theories of bonding, including valence bond, molecular orbital, valence shell electron repulsion, and ligand field theory. Emphasizes structure of crystalline solids, coordination compounds, reaction mechanisms, and structure-property relationships. Three hours of lecture per week.

Prerequisite(s): CHE 214.

CHE 316 Inorganic Chemistry Laboratory 1 Credits

Students will explore a variety of synthetic methodologies for the growth of inorganic molecular systems, and solid-state materials. A transition metal or main group metal plays a central structural role in all systems that will be examined. Modern analytical methods will be applied to characterize synthesis products, such as FT-IR spectroscopy, polarimetry, NMR, and powder X-ray diffraction analysis.

Prerequisite(s): CHE 315 or as corequisite.

CHE 320 Polymer Chemistry 3 Credits

Designed to acquaint students with the structure and properties of polymers, the contrast between small molecules and polymers, methods of measuring molecular weight, the mechanism of polymerization, and the methods of fabricating polymers.

Prerequisite(s): CHE 214, CHE 305 or CHE 306.

CHE 325 Physical Chemistry Laboratory 1 Credits

Measurements are made of physical properties of molecules and chemical dynamical processes. These measurements will be used to develop models which explain the physical chemical nature of the systems under examination. Experiments will utilize various instrumental techniques such as infrared spectrometry, nuclear magnetic resonance, fluorescence and UV/Vis spectrometry. One three-hour lab per week.

Prerequisite(s): CHE 250, CHE 305.

CHE 330 Instrumental Analysis Laboratory 2 Credits

This course is designed to give students practical experience using modern analytical instrumentation and to provide students with the background theory and principles of operation. The instrumental methods introduced in this course include: ultraviolet and visible spectroscopy, atomic emission spectroscopy, gas chromatography (GC), high performance liquid chromatography (HPLC), X-ray powder diffraction analysis and electrochemical analysis. This experimental laboratory course meets two times per week with three hours for each session. One session will be focused on instrumentation background theory and discussion and the other session will be experimental practice.

Prerequisite(s): CHE 214, CHE 250, PHY 201.

CHE 350 Advanced Organic Synthesis 2 Credits

The first of four experimental chemistry labs designed for chemistry majors. It presents the use of modern techniques, and instrumentation in organic chemistry, including distillation, chromatography, infrared, ultraviolet, nuclear magnetic spectroscopy, and mass spectrometry. Two three-hour labs per week.

Prerequisite(s): CHE 214.

CHE 375 Computational Chemistry Lab 2 Credits

This course will provide students with a means to explore various methods in computational chemistry. Basic computational methods will be developed from first principles and these methods will then be tested using various modeling and computational software packages. Methods will include, but are not limited to, molecular mechanics, semi-empirical molecular orbital calculations, ab initio methods, and density functional calculations. Students will be exposed to various computational software packages and the strengths and limitations of each methodology will be explored. The course will meet in a computer laboratory for two for three-hour lab periods a week.

Prerequisite(s): CHE 305.

CHE 400 Chemical Bonding 3 Credits

The effects of the chemical bond on the structure and properties of molecules are investigated. Molecular orbital theories of bonding are introduced. Emphasis is placed on group theoretical methods utilizing molecular symmetry to simplify the description of the electronic structure of molecules and to predict their geometric structures and reactivity. Three hours of lecture per week.

Prerequisite(s): CHE 305, MTH 212.

CHE 415 Special Topics in Chemistry 3 Credits

An advanced level of one or more areas of modern chemistry. Emphasis on research and the literature of an area of current importance. Three hours of lecture per week.

CHE 420 Physical Organic Chemistry 4 Credits

In-depth studies of the methods for elucidating mechanisms of organic reactions for students who have completed one year of organic chemistry and physical chemistry. Topics include conformational analysis, linear free energy relationships, frontier molecular orbital theory, transition state theory, and chemical reaction kinetics. Isotopic scrambling, kinetic isotope effects, NMR and IR spectroscopy, polarimetry, and ultraviolet-visible spectrophotometry will be employed to investigate these concepts. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): CHE 214, CHE 305.

Corequisite(s): CHE 214L.

CHE 420L Physical Organic Chemistry Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 420.

CHE 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

CHE 491 Internship in Chemistry 1-4 Credits

A supervised research experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in a private, public, non-profit, or governmental organizations under the guidance of a mentor. The mentor and student will have regular consultation with the departmental internship coordinator to assess the student's progress. Normally, 50 hours of internship per credit is required. The grade for the course will be determined by the students' overall performance in their research work, a research paper documenting their work with their internship mentor and an oral or poster presentation at the end of the semester.

Prerequisite(s): 2.5 GPA and permission of the instructor.

GEO 100 Earth Systems Science 3 Credits

Investigates the major global processes that occur on Earth. These processes can be grouped into four major systems: atmosphere, hydrosphere, lithosphere, and cosmosphere. Each system interacts with and affects the other systems creating, in a sense, a single Earth process. With this approach, the student will view the Earth as a whole, and understand that the many seemingly separate components that make up this planet are, in fact, a set of interacting processes, that operate in cycles through time, within a single global system. Three hours of lecture per week.

GEO 102 Earth Materials and Processes Lab 1 Credits

A hands-on laboratory experience involving the origin, significance, identification, and classification of Earth materials and processes. Mineral and rock specimens, soil and water samples, and topographic and geologic maps are utilized. Numerous field trips to local sites help students visualize many of the concepts discussed. One three-hour lab per week.

Prerequisite(s): concurrent enrollment in, or prior completion of, GEO 100 or GEO 113 is required.

GEO 113 Environmental Geology (also cross listed as GLS-113) 3 Credits

Examines the fundamental premise that “our society exists by geologic consent subject to change without notice” by studying a number of important geologic processes and cycles, and the hazards and/or resources they present to individuals, society, and the natural environment. Topics discussed include earthquakes, volcanism, stream flooding, coastal erosion, climate change, and water, soil, mineral, and energy resources. Cost/benefit considerations, hazard mitigation concepts, economic and political ramifications, and the interactions among the lithosphere, hydrosphere, atmosphere, and biosphere also are presented. The course is designed to give non-science majors a deeper appreciation of their connection to the surrounding geologic environment, leading to better, more informed business, political, policy, and personal decisions. Three hours of lecture per week. Note: This course is cross-listed as GLS 113. Students may not get credit for both GEO 113 and GLS 113.

GEO 168 Mesozoic Ruling Reptiles 3 Credits

A survey of the vertebrate groups that dominated the land (Dinosaurs), the seas (Mosasaurs, Plesiosaurs, Pliosaurus, Tylosaurus, and Ichthyosaurs) and the skies (Pterosaurs, Pterodactyls) during the Mesozoic Era. The course considers diversity of skeletal architectures and their reconstructed function and the often controversial, inferred anatomy, physiology, reproductive strategy, habit, and social behaviors of these animals that are different from mainstream reptiles, birds, and mammals. It also covers the paleogeographical, and paleoclimatological conditions that facilitated the evolutionary rise to dominance and diversification of these vertebrate groups and the debated causes of their eventual extinction. Three hours of lecture per week. Weekend field trips may be required.

GEO 201 Elements of Mineralogy 4 Credits

The physical properties, chemistry, atomic structure, crystallography, uses, and environmental impacts of important minerals of the lithosphere and biosphere are presented. In addition, lab assignments and exercises emphasize crystal symmetry and chemistry; polarizing microscope, ICP, and x-ray analytical techniques; the graphical display and interpretation of compositional data; optical properties of isotropic and uniaxial minerals; and the identification of mineral hand specimens. Three hours of lecture and one three-hour lab per week. At least one weekend field trip required. Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121 taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 201L.

GEO 201L Elements of Mineralogy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 201.

GEO 290 Directed Research and Study in Geosciences 1-4 Credits

Directed Research and Study in Geosciences will provide an opportunity for freshman and sophomore students to gain hands-on research experience in the geosciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

GEO 305 Petrology and Petrography 4 Credits

The origin, evolution, and terrestrial distribution of igneous and metamorphic rocks are presented and detailed. Classroom lectures and discussions emphasize rock geochemistry, mineralogical variability, the constraints placed on petrogenetic models by physio-chemical studies of natural and synthetic systems, and the relation of the various rock types to current plate tectonic theory and other whole-earth processes. The laboratory emphasizes the continuing development of optical microscopy skills, the identification of rock texture and mineralogy in thin section and hand specimen, the optical determination of mineral composition, and the recognition of possible petrogenetic processes as recorded in the rocks themselves. Three hours of lecture and one three-hour lab per week. Two weekend field trips required. Prerequisite(s): GEO 201, and CHE 122 and CHE 123 or taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 305L.

GEO 305L Petrology and Petrography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 305.

GEO 306 Sedimentology and Stratigraphy 4 Credits

The principles of weathering, erosion, transportation, and deposition of sediment are the focus of this course. Sediment characteristics are examined to identify the processes involved in transporting grains and the specific environment in which the grains were deposited. Students will learn how to collect, analyze, and interpret sedimentary data and how to interpret surface and subsurface stratigraphic data using various techniques, such as lithostratigraphic, biostratigraphic, and geophysical, correlations. Field trips will expose students to different sedimentary environments and provide opportunities for students to learn how to conduct fieldwork. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): GEO 100.

Corequisite(s): GEO 306L.

GEO 306L Sedimentology and Stratigraphy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 306.

GEO 310 Structural Geology 4 Credits

The origin, distinguishing characteristics, and geographic distribution of deformational structures of the Earth's crust. In the laboratory, GPS, GIS, geologic maps, and three-dimensional problems are used in the study of typical surface and subsurface geologic problems. Three hours of lecture and one three-hour lab per week. Weekday and/or weekend field trips may be required. Prerequisite(s): GEO 100 or GEO 113, GEO 102.

Corequisite(s): GEO 310L.

GEO 310L Structural Geology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 310.

GEO 350 Soil and Surficial Processes 4 Credits

This course examines the physical, chemical, hydrological, and biological aspects of soil and their relation to geomorphologic development.

Specific topics include descriptions of soil texture and structures, soil classification, soil colloids, soil redox and pH, and their effect on vadose zone water chemistry. Soil genesis and erosion controls, microbiology/ecology, nutrient cycles, and modern soil pollution from sludge and pesticide applications, as well as domestic and industrial chemical spills, also are discussed. The lab portion of the course introduces the basic techniques of soil analysis, both physical and chemical, and field survey methods. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, and GEO 102.

Corequisite(s): GEO 350L.

GEO 350L Soil and Surficial Processes Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 350.

GEO 407 Hydrology and Water Resources 4 Credits

This course introduces the principles that govern both surface water and groundwater flows that have applications to societal water needs. Surface water topics cover the basics of the hydrologic cycle, the processes of precipitation, evapotranspiration, runoff, and infiltration, and various factors affecting water supply and water quality issues in a modern watershed. Groundwater topics examine the principles that govern flow through a porous medium and the basics of well hydraulics under different pumping conditions that community development requires. Laboratory exercises will give students hands-on experience with the delineation of watersheds, analysis of precipitation data, and flow contaminant transport modeling. The field portion of the laboratory includes runoff and stream discharge measurements, as well as hydraulic conductivity estimations from both slug and pumping tests. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, GEO 102, and MTH 105.

Corequisite(s): GEO 407L.

GEO 407L Hydrology and Water Resources Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 407.

GEO 480 Senior Thesis 3 Credits

A senior thesis is optional for geosciences majors. However, a senior thesis is required for eligibility to graduate with honors in geosciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

GEO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

GEO 491 Internship in Geosciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

ISM 100 Introduction to the Integrated Sciences and Math 4 Credits

Traditional lectures and laboratory experiences are blended to encourage students to begin asking questions and designing experiments to learn about the physical, life, and Earth sciences. This is the entry-level course for the integrated sciences and math major, though it is open to all students who want to actively explore the nature of science. Two three-hour combined lab/lecture sessions per week.

ISM 410 Seminar in the Integrated Sciences and Math 3 Credits

As a senior seminar course, class discussion, presentation, and participation will be emphasized. Science topics covered will extend beyond the range of a single science discipline. Students will evaluate articles (from popular science magazines, newspapers, etc.) to discern the connections among various scientific disciplines. Students will present written critiques of the articles focusing on the proper use of the scientific method, data analysis techniques (e.g., statistics, mathematics, etc.), and on the plausibility of the interpretations. Students will also present a semester-long project (both written and oral) that focuses on the connections among disciplines of a scientific issue.

Prerequisite(s): ISM 100, senior standing, or permission of instructor.

MAR 120 Oceanography 3 Credits

Investigates the interrelationships among the geological, chemical, physical, and biological aspects of oceanography. Topics include origin and evolution of ocean basins; physical characteristics of modern oceans; seawater chemistry; ocean and atmosphere interactions; ocean currents; waves and tides; coastal processes; biological productivity; and diversity, distribution and adaptations of marine organisms. Throughout the course, emphasis is placed on the processes that connect the seemingly separate topics to each other and to human life. Weekend field trips may be required. Three hours of lecture per week. Note: This course is cross-listed as GLS 120. Students may not get credit for both MAR 120 and GLS 120.

MAR 121 Introductory Oceanography Lab 1 Credits

Introduction to the fundamental aspects of geological, chemical, physical, and biological oceanography. Students learn through inquiry-based, hands-on exercises and activities using actual data collected in the lab and in the field. Independent projects and local field trips during lab and on weekends may be required. One three-hour lab per week.

Corequisite(s): MAR 120 or GLS 120 or as prerequisite(s).

MAR 210 Marine Life Through Time 4 Credits

Survey of the important developments in marine life over the last three billion years from the Pre-Cambrian evolution of one-celled organisms, through the Cambrian explosion of complex marine invertebrate life and subsequent diversification of backboned organisms in the Ordovician time, to the colonization of marginal marine and freshwater habitats in the Silurian-Devonian geological periods, and ultimately to extinctions during global crises of the late Devonian, Permian, Triassic, Cretaceous, and Pleistocene time intervals. The emphasis is on evolutionary adaptive breakthroughs within each phylum, particularly the significant morphological and anatomical innovations, and the subsequent radiation of these higher taxa into new habitats and niches through geologic time. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): GEO 100 or GEO 113, GEO 102 or BIO 115 or permission of instructor.

MAR 210L Marine Life Through Time Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 210.

MAR 227 Introduction to Field Marine Science: Subtropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in subtropical environments, emphasizing shallow subtidal and intertidal environments such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include the diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a subtropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 228 Introduction to Field Marine Science: Boreal Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in boreal environments, emphasizing the rocky shallow subtidal and intertidal environments. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; day-night fluctuations in tide pool chemistry; plankton dynamics; predator-prey relationships; the physical processes and chemical properties of water; and comparisons of wave-exposed and wave-protected sides of a shoreline. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a boreal environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 229 Introduction to Field Marine Science: Tropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in tropical environments, emphasizing the shallow subtidal and intertidal environments, such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a tropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 290 Directed Research and Study in Marine Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the marine sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

MAR 325 Marine Vertebrates 4 Credits

A survey of the biology of marine vertebrate animals, including fish (jawless fish, sharks, rays, and bony fish), reptiles (sea turtles and sea snakes), sea birds, and mammals (manatees, seals, and whales). The evolution, physiology, natural history, ecological relationships, and human interactions of these groups are emphasized. Three hours of lecture and one three-hour lab per week. Field trips may be required. Prerequisite(s): BIO 272 and BIO 272L.

Corequisite(s): MAR 325L.

MAR 325L Marine Vertebrates Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 325.

MAR 330 Chemical Oceanography 4 Credits

Introduction to the chemical aspects of the oceans and their influence on marine ecosystems and Earth processes. Emphasis is placed on chemical and physical properties of seawater, atmosphere-ocean interactions, biogeochemical cycles with marine components, production and destruction of marine organic matter, chemical ecology, and marine pollution. During the lab portion of this course, students gain hands-on experience in analyzing ocean water samples, experimental design, and interpreting marine chemical data. Three hours of lecture and one three-hour lab per week. Weekend field trips and independent projects may be required. Prerequisite(s): CHE 120, CHE 121, MAR 120, and MAR 121; or permission of instructor.

Corequisite(s): MAR 330L.

MAR 330L Chemical Oceanography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 330.

MAR 340 Marine Processes and Environments: Seminar 3 Credits

This course is designed as a seminar course. Therefore, students will learn to lead class discussions, to analyze and critique peer-reviewed journal articles, and to enhance their presentation skills. Students will interpret graphical, spatial, and numerical data to support their positions. Content will emphasize the interactions among marine processes, biological features, and geologic landforms.

Prerequisite(s): MAR 120 or GEO 100; GEO 306.

MAR 360 Plankton Ecology 4 Credits

Examines the diversity, physiology, and ecology of marine phytoplankton and zooplankton. Students will survey the dominant plankton groups, their distribution, nutritional requirements, growth kinetics, and behavior. Planktonic predator/prey interactions and food web dynamics will be discussed. Students will also examine the interdisciplinary nature and role of plankton in biogeochemical cycles. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): MAR 120 and MAR 121; or BIO 116.

Corequisite(s): MAR 360L.

MAR 360L Plankton Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 360.

MAR 380 The Learning and Teaching of Marine Science 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

MAR 401 Marine Ecology 4 Credits

The purpose of this course is to introduce students to fundamental principles in ecology, as it relates to marine systems. Topics include the marine environment and its influence on the organisms living there; biodiversity and speciation; factors regulating population dynamics in marine systems; larval and fisheries ecology; species interactions such as predation, competition, and symbiosis; factors regulating productivity and energy flow in marine systems; and marine conservation. Hands-on laboratory exercises will provide students with the opportunity to design and conduct experiments related to marine ecology, and to collect, analyze, and interpret data from those experiments. Ecosystem modeling will also be introduced. Three hours of lecture and one three-hour lab per week. Weekend field trips may be introduced. Prerequisite(s): BIO 272, BIO 272L.

Corequisite(s): MAR 401L.

MAR 401L Marine Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 401.

MAR 410 Physical Oceanography 3 Credits

Introduction to the physical aspects and processes of the oceans and their influence on marine ecosystems and Earth processes. Topics include distribution of salinity and water temperature and their effect on water movement, the oceanic heat budget, atmospheric and oceanic interactions, ocean currents including surface and deep water circulation, waves, tides, and medium- to small-scale circulation features. Throughout the course, emphasis is placed on how these physical processes affect the biology and chemistry of the ocean. Three hours of lecture per week. Weekend field trips may be required.

Prerequisite(s): MAR 120.

MAR 480 Senior Thesis 3 Credits

A senior thesis is optional for marine sciences majors. However, a senior thesis is required for eligibility to graduate with honors in marine sciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the marine sciences major and permission of department chair.

MAR 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

MAR 491 Internship in Marine Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 580 Ind Marine Sci Field Study 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

PHY 100 Principles of Physics I 3 Credits

Introductory noncalculus physics with applications for pre-professional, biology, and geological, environmental and marine sciences majors. Classical mechanics, energy, mechanical waves, fluid statics and dynamics, thermodynamics. Elements of modern physics are interwoven with those of classical physics from the beginning. Not open to chemistry, physics, or mathematics majors. Three hours of lecture per week. Prerequisite(s): MTH 105, MTH 210, MTH 211 or MTH 212.

Corequisite(s): PHY 100L.

PHY 100L Principles of Physics I Lab 1 Credits

For students concurrently taking PHY 100. One three-hour lab per week.

Corequisite(s): PHY 100.

PHY 101 Principles of Physics II 3 Credits

Continuation of Physics 100. Electrostatics, electricity, and magnetism; DC and AC circuits, physical and geometrical optics, introduction to elementary particle and quantum physics. Three hours of lecture per week. Prerequisite(s): PHY 100.

Corequisite(s): PHY 101L.

PHY 101L Principles of Physics II Lab 1 Credits

For students concurrently taking Physics 101. One three-hour lab per week.

Corequisite(s): PHY 101.

PHY 103 Science of Light and Color 3 Credits

An introduction to the science of light, color, and optics. Covers history of theories of light and vision, applications in art, photography, natural phenomena (rainbows, mirages, etc.), and modern technology, e.g., lasers and telecommunications. Many topics are illustrated by in-class demonstration experiments with lasers and other optical devices.

PHY 104 Energy, the Environment & Man 3 Credits

The many vital roles played by energy in the universe at large, on the earth, and in the activities of man are examined, including the basic sources of energy, the impact upon the environment due to these processes and possible future sources. A high school course in physics or chemistry is desirable but not necessary.

PHY 105 Matter, Forces, Energy: Explor'n 4 Credits

An introduction to the basic principles of physics focusing on the concepts of matter, force, and energy. The course will study, in depth, simple physical systems chosen to emphasize the interconnection of these three basic concepts. It will explore the behavior of these simple physical systems using directed group exercises coordinated with hands-on laboratory activities. One three-hour lecture and one three-hour lab per week.

PHY 105L Matter, Forces and Energy Lab 0 Credits**PHY 180 Astronomy 3 Credits**

Examines mankind's quest to understand the origin and form of the universe. Emphasis on the ideas of modern cosmology and their impact on our changing perception of our place in the universe, making use of information gleaned by simply looking at the night sky as well as post Apollo-era views of the solar system and the evolving universe as a whole.

PHY 200 General Physics I 4 Credits

Introductory classical physics; Newtonian mechanics, including the conservation laws, wave motion, gravity, thermodynamics. Three hours of lecture and one three-hour lab per week. Prerequisite(s): MTH 210 or as corequisite.

Corequisite(s): PHY 200L.

PHY 200L General Physics I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PHY 200.

PHY 201 General Physics II 4 Credits

A continuation of the concepts developed in Physics 200. Electricity, electrical circuits, magnetism, Maxwell's equations. Light and optics, including lenses, interference, and diffraction. Three hours of lecture and one three-hour lab per week. Prerequisite(s): PHY 200, MTH 211 or concurrent enrollment.

Corequisite(s): PHY 201L.

PHY 201L General Physics II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PHY 201.

PHY 203 Introduction to Modern Physics 3 Credits

Covers space-time relativity, elementary particles, and basic quantum mechanics, including solutions of the Schrodinger wave equation. Applications of quantum theory in atomic, nuclear, and solid-state physics.

Prerequisite(s): PHY 201 or permission of instructor.

PHY 250 Scientific Computing 3 Credits

Introduces students to modern techniques and applications of scientific computing. Students will learn to write code in python, a popular, modern programming language used by scientists and industry around the world. They will also retrieve and analyze large datasets using SQL, a standard database language. Students will develop their own software and learn to manage it online using github, an online code repository.

PHY 300 Mechanics 3 Credits

Kinematics and dynamics of particles and systems, analysis of harmonic oscillator systems, normal modes, Lagrangian and Hamiltonian dynamics and classical waves are studied.

Prerequisite(s): PHY 201, MTH 250.

PHY 305 Electricity and Magnetism 3 Credits

Electro- and magnetostatics, fields and potentials, and boundary value problems are covered.

Prerequisite(s): PHY 201, MTH 250.

PHY 310 Adv Electricity and Magnetism 3 Credits

Maxwell's equations; electromagnetic waves in vacuum and in material media; radiation, propagation, reflection, and refraction.

Prerequisite(s): PHY 305, MTH 308.

PHY 315 Thermodynamics/Stat Mechanics 3 Credits

Thermodynamic systems; the first and second laws of thermodynamics; entropy and thermodynamic potentials; distribution of molecular speeds; Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac distributions.

Prerequisite(s): PHY 201.

PHY 320 Quantum Mechanics 3 Credits

Historical background; the Bohr Theory; the Schrodinger equation, its interpretation and applications; the uncertainty and exclusion principles; development of the formalism.

Prerequisite(s): PHY 300.

PHY 330 Basic Electronics 3 Credits

An experimental study of devices and circuits in analog and digital electronics. No previous experience with electronic circuits is assumed; introductory topics including signal acquisition, computer interfaces, and analog/digital signal processing will be covered. One hour of lecture plus two three-hour labs per week.

Prerequisite(s): PHY 201 or permission of instructor.

PHY 350 Advanced Laboratory 2 Credits

Experiments in atomic and nuclear physics, electricity and magnetism, and physical optics. Students have the opportunity to work intensively on a particular experiment. Minimum of five to six hours per week.

PHY 400 Atomic Physics 3 Credits

Quantum mechanics and the one-electron atom; atomic structure and optical spectra of multi-electron atoms. Quantum statistics, band theory of solids.

Prerequisite(s): PHY 320.

PHY 405 Fundamentals Nuclear Physics 3 Credits

Nuclear mass and size; nuclear forces and some models of the nucleus; radioactivity and detection; subnuclear particles and resonances.

Prerequisite(s): PHY 320.

PHY 415 Physical Optics 3 Credits

Waves and the superposition principle; interference, Fraunhofer and Fresnel diffraction; electromagnetic nature of light; absorption and scattering; dispersion; polarization.

Prerequisite(s): PHY 201, MTH 250.

PHY 416 Modern Experimental Optics Lab 1 Credits

A laboratory course in geometrical and physical (wave) optics, designed to supplement the material presented in PHY 415. Serves as an introduction to the optical equipment and techniques that are employed in laboratory research. A series of experiments cover the topics of polarization, interference, image formation, Fourier optics and lasers, and optical spectroscopy.

Prerequisite(s): PHY 201.

PHY 450 Topics in Modern Physics 3 Credits

A selected topic of contemporary interest in physics, e.g., general relativity and gravity waves, is studied. Emphasis on current journal literature and research. May be taken more than once with departmental approval. An excellent introduction to independent research in one area of physics.

Prerequisite(s): PHY 201.

PHY 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

PHY 491 Internship in Physics 1-4 Credits

A supervised research experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations under the guidance of a mentor. The mentor and student will have regular consultation with the departmental internship coordinator to assess the student's progress. Normally, 50 hours of internship per credit is required. The grade for the course will be determined by the student's overall performance in their research work, a research paper documenting their work with their internship mentor and an oral or poster presentation at the end of the semester.

Prerequisite(s): 2.5 GPA and permission of the instructor.

MTH 100S Math Skills Lab 1 Credits

The Math Skills Lab helps students master arithmetic and elementary algebra necessary for college level mathematics courses. Students in the College of Liberal Arts, Education, and Sciences who do not pass the Mathematics Placement Test are required to complete the Math Skills Lab successfully before enrolling in liberal arts mathematics courses. Students are required to attend regular class sessions. Students have access to tutors, computer-assisted instruction, and structured workshops. The one supplemental education unit does not count toward graduation; grading is done on a Y/Z (pass/not pass) basis.

MTH 102 Finite Mathematics 3 Credits

The course begins with consolidation of some basic topics including sets, number theory, real numbers, functions, and graphs. Statistics and probability theory are introduced with applications to the social and natural sciences. Throughout the course there will be an emphasis on formulating and solving familiar sorts of problems in mathematical terms.

Prerequisite(s): A mathematics SAT score of 550 or ACT score of 23, or a passing score on the Math Skills placement Test, or passing MTH 100S with grade of Y.

MTH 105 Algebra and Trigonometry 4 Credits

Algebraic functions, trigonometric functions, identities and conditional equations, inequalities, exponential and logarithmic functions.

Prerequisite(s): A mathematics SAT score of 600 or ACT score of 26, or a mathematics SAT score of 550 or ACT score of 23 and a passing score on the Algebra Section of the Math and Science Majors Placement test, or a score of 22 on the Math Skills placement Test and a passing score on the Algebra Section of the Math and Science Majors Placement test.

MTH 120 Intro to Applied Statistics 3 Credits

Collection and presentation of data. Measures of location and variation, sampling theory, hypothesis testing, confidence intervals, t-tests, chi-square tests, regression, and correlation. Emphasizes practical applications. Not open to business administration, chemistry, environmental, geosciences, marine sciences, math or liberal studies: marine ecological or environmental emphasis majors.

Prerequisite(s): MTH 102 or MTH 105.

MTH 150 Mathematics for Education Majors, I 3 Credits

This is the first course in a three-course sequence for elementary education majors. This course covers the concept of Numbers, starting with counting numbers, decimals, negative numbers, fractions, and real numbers; different ways of representing numbers, and the relations between them are explored; different meanings and applications of the arithmetic operations are studied; standard and non-standard algorithms for arithmetic are considered in light of the representation of numbers. May not be used by SLAS students to satisfy the mathematics component of the core. **Prerequisite(s):** A mathematics SAT score of 550 or ACT score of 23; A passing score on the Math Skills placement Test; or passing MTH 100S with grade of Y. .

MTH 151 Mathematics for Education Majors II 3 Credits

This is the second course in a three-course sequence for elementary education majors. In this course, students will study proportional reasoning, Number Theory, Algebra, Geometry, and measurement. May not be used by SLAS students to satisfy the mathematics component of the core.

Prerequisite(s): MTH 150.

MTH 152 Mathematics for Education Majors III 3 Credits

This is the third course in a three-course sequence for elementary education majors. In this course, students will study area and volume, transformational geometry, statistics and probability.

Prerequisite(s): MTH 151.

MTH 210 Calculus I 4 Credits

Introduces analytic geometry, functions, limits, and derivatives; differentiation of algebraic and trigonometric functions, curve sketching, maxima and minima, and higher derivatives.

Prerequisite(s): A mathematics SAT score of 650 or ACT score of 29; or a mathematics SAT score of 550 or ACT score of 23 and a passing score on the Pre-Calculus Section of the Math and Science Majors Placement test; or a score of 22 on the Math Skills placement Test and a passing score on the Precalculus Section of the Math and Science Majors Placement test; or passing MTH 105.

MTH 211 Calculus II 4 Credits

The definite integral, differentiation of transcendental functions, methods of integration and approximate integration, determination of area, volume, and surface area.

Prerequisite(s): MTH 210.

MTH 212 Calculus III 4 Credits

Infinite series; functions of two and three variables, vectors and tangent planes, partial derivatives, multiple integrals, determination of volume and density.

Prerequisite(s): MTH 211.

MTH 230 Discrete Mathematics 4 Credits

An introduction to topics in Discrete Mathematics. This course covers methods of proof, induction and recursion, and other topics in discrete mathematics. Topics may include graph theory, trees, and symmetry groups.

Prerequisite(s): MTH 102, MTH 105 or MTH 210.

MTH 240 Linear Algebra 3 Credits

Systems of linear equations; vector spaces; linear independence; determinants; orthogonality; linear maps; eigenvectors.

Prerequisite(s): MTH 210 or as corequisite; sophomore standing; or permission of instructor.

MTH 250 Differential Equations 3 Credits

First order differential equations, separable and exact; integrating factors; second order linear differential equations; series solutions of second order linear differential equations; higher order equations; existence and uniqueness theorems; systems of linear differential equations.

Prerequisite(s): MTH 240, MTH 211.

Corequisite(s): MTH 212 or as prerequisite.

MTH 308 Advanced Calculus 3 Credits

Vectors, gradients, and directional derivatives, Lagrange multipliers, Taylor's theorem, multiple integrals, change of variables, line and surface integrals, Stokes' theorem.

Prerequisite(s): "B" average in MTH 210 and MTH 211; MTH 212, MTH 240.

MTH 315 Modern Geometry 3 Credits

Covers geometry from a modern point of view, with emphasis on non-Euclidean geometry, particularly projective geometry.

Prerequisite(s): MTH 211, MTH 240.

MTH 340 Probability & Stat Analysis I 3 Credits

Theory of sets and probability; discrete and continuous random variables and probability distributions. Emphasizes foundations and utilizes the techniques of the calculus.

Prerequisite(s): MTH 212 or MSD 111.

MTH 341 Probability & Stat Analysis II 3 Credits

Continuation of MTH 340. Foundations of mathematical statistics: normal distributions, estimation, confidence intervals and hypothesis testing; topics chosen from student's t- test, chi-square tests, analysis of variance and regression analysis. Emphasizes foundations and utilizes the techniques of the calculus.

Prerequisite: MTH 340. Spring.

MTH 401 Modern Algebra 3 Credits

Provides an introduction to modern abstract algebra. It emphasizes the axiomatic method to analyze the major algebraic systems. The instructor will choose the topics to be studied from among the following algebraic structures: integral domains, fields, complete ordered fields, groups, polynomials, rings, ideals and modules.

Prerequisite(s): MTH 240.

MTH 402 Topics in Advanced Mathematics 3 Credits

Chosen from advanced pure or applied mathematics. Topics vary, depending on instructor.

Prerequisite(s): MTH 308.

MTH 410 Complex Analysis 3 Credits

Analytic functions, conformal mapping, power series, Cauchy's theorem, calculus of residues.

Prerequisite(s): MTH 308.

MTH 420 Number Theory 3 Credits

Covers topics including divisibility theory, the prime numbers, the theories of congruences and of quadratic reciprocity, and Fermat's Last Theorem. Other topics may also include applications to cryptography, Pell's equations, continued fractions, and the theory of partitions.

Prerequisite(s): MTH 240 or permission of instructor.

MTH 430 Introduction to Topology 3 Credits

A comprehensive introduction to elementary topology. The concepts of topological spaces and metric spaces will be introduced. Connectedness, compactness and properties of subsets of the real numbers rooted in topology will also be considered. The quotient topology will be used to construct surfaces as identification spaces, and tools will be developed to distinguish one surface from another.

Prerequisite(s): MTH 212.

MTH 440 Real Analysis 3 Credits

Covers the theory of sets, the real number system and its properties, convergence of sequences and series of numbers and functions, and the theory of integration, including: measure theory, the Riemann integral, and introduction to the Lebesgue theory of integration.

Prerequisite(s): MTH 308 or as corequisite.

MTH 490 Independent Research and Study 1-4 Credits

Immerses the student in research and mathematical literature. If possible, the student will publish the results or present them at a scientific meeting.

Italian

Program Overview

A minor in Italian offers students the opportunity to receive a practical grounding in the Italian language and culture through a challenging curriculum which may include study abroad. In addition, our language, literature, film and culture courses prepare students to understand cultural diversity abroad and at home, to appreciate their own language and culture, and to gain global awareness. An individual fluent in another

language acquires insight into the world in which we live. Advanced foreign language skills, combined with an international perspective and intercultural expertise, position students for productive careers in the global and multicultural marketplaces of the 21st century. Faculty engagement in research and teaching excellence combines with our unique "accent on the individual" through advisement and co-curricular opportunities to create a challenging yet supportive atmosphere in which students can realize their potential.

A minor in Italian will complement many degree programs in business, education, music and the liberal arts.

Students in the Italian minor at Rider acquire an international perspective and a special intercultural sensitivity. Advanced foreign language skills combined with intercultural expertise increase the employment prospects of our students in the global market place of the 21st century.

Note: Students must receive a grade of "C" or better in courses required for the major or minor in the department. If a student receives a grade lower than "C" in a required course, the student must meet with his/her academic advisor to discuss the appropriate action that must be taken to remedy the situation.

Requirements for the Italian Minor

(18 credits)

ITA 200 & ITA 201	Italian III and Italian IV ¹	6
ITA 305 or ITA 306	Italian Literature I: 13th to 19th Cent. Italian Literature II: the 20th Century	3
Three additional Italian courses at the 300 level or above (may include a second literature course).		9
ITA 300	Advanced Italian Grammar and Conversatio	
ITA 310	Italian Culture and Civilization	

ITA 496	Special Studies ²
Total Credits	18

¹ Two advanced language or literature courses will be substituted upon demonstrated proficiency.

² May be repeated for credit.

Some of the requirements for the minor may be met by Study Abroad by agreement with the department. Students must enroll in at least one upper-level course upon completion of a Study Abroad program.

ITA 100 Italian I 3 Credits

An introduction to the fundamentals of Italian grammar and vocabulary. Students will gain fluency in an immersion-style classroom as they gain cultural awareness. Students are expected to work extensively in an on-line program.

Prerequisite(s): placement test if Italian has been studied elsewhere.

ITA 101 Italian II 3 Credits

A continuation of ITA 100. Emphasis is on gaining oral mastery in a culturally authentic environment. The class continues to be immersion-style and students continue out-of-class practice in an on-line program.

Prerequisite(s): ITA 100 or placement test.

ITA 200 Italian III 3 Credits

Continuation of ITA 101. Students continue their mastery of Italian vocabulary and grammar in immersion-style classes. Continued emphasis on cultural competency and increased work in written Italian.

Prerequisite(s): ITA 101 or placement test.

ITA 201 Italian IV 3 Credits

Continuation of ITA 200. Students complete their study of basic grammar. Increased emphasis on writing and reading as students continue to master the spoken language.

Prerequisite(s): ITA 200 or placement test.

ITA 300 Advanced Italian Grammar and Conversatio 3 Credits

A study of advanced grammar and functional Italian vocabulary with an emphasis on spoken expression. Students will review previously-learned structures as they acquire new structures and idiomatic expressions in order to gain fluency and perfect their expression. Lessons will be organized around conversation topics. Class will be conducted in Italian.

Prerequisite(s): ITA 201.

ITA 305 Italian Literature I: 13th to 19th Cent. 3 Credits

A chronological overview of Italian literature from the poets of the 13th and 14th centuries and the fathers of the Italian literature (Dante, Petrarch and Boccaccio) to the 19th century through the study of prose and poetry. Emergence of the Italian language and nation will be examined beside regionalism and use of dialects in both poetry and prose. This course will satisfy the literature requirement for the minor and will be conducted in Italian.

Prerequisite(s): ITA 201.

ITA 306 Italian Literature II: the 20th Century 3 Credits

An examination of 20th-century literature through the works of authors like Pirandello, d'Annunzio, Ungaretti, Montale, Luzi, Primo Levi, Maraini, Ginzburg, Calvino, Eco, Sciascia. Students will read selected short stories, plays, poems, and novels. This course will satisfy the literature requirement for the minor and will be conducted in Italian.

Prerequisite(s): ITA 201.

ITA 310 Italian Culture and Civilization 3 Credits

This course will introduce students to Italy's cultural heritage and contemporary place in Europe. Students will examine Italy's historical development from the fall of the Roman Empire to current times. Students will become familiar with its geography, and they will examine the role of religion and the impact of regionalism on Italian identity. Topics include Italy's political structure, contribution to the arts, cuisine, geography, and other topics. Students will also examine stereotypes of Italian Americans as well as the changing face of immigration. The course will be conducted in English.

ITA 496 Special Studies 3 Credits

A seminar open to a variety of topics treating a particular author, period, genre, or theme.

Prerequisite(s): ITA 201.

Journalism

Program Overview

Rider University journalism students learn traditional writing, editing, photography and publication design skills. These fundamentals are paired with video production tools and industry software, social media strategies and attention to computer-assisted reporting – the well-rounded basis to successfully enter careers in news, sports, features and investigative journalism.

Students also learn how to pitch stories to editors, how to find sources and conduct interviews, how to access key state and federal public records, and how to effectively present news content in today's multimedia world. In our state-of-the-art Mac journalism labs, students learn the Adobe design package including Photoshop, InDesign, Illustrator, and Dreamweaver; they build audio-slideshows and video packages using FinalCutProX; and ultimately help build a journalism website using content management systems.

Many of our students participate in extracurricular activities at the university's fleet of award-winning media: The Rider News consistently wins state and regional journalism prizes from the Collegiate Press Association; The Rider University Network (R.U.N.) TV station has won numerous awards for audio management, video music entertainment, sports play-by-plays, and video documentaries; and in 2015, The Bronx 107.7 was named the 15th best college radio station in the nation.

Curriculum Overview

Core classes in the journalism program include news reporting and writing, copy editing, publication design, feature writing, in-depth reporting, computer assisted reporting and advanced speech. Other classes include communication theory, writing for broadcast, public relations, organizational communication, photography, internal communication and more.

Total Credits		90-91

¹ Students may not carry a double major within the department. Communication and journalism majors may declare only one minor in the department. No more than two courses may be used to meet the requirements for both a major and a minor in the department.

² If a student receives a grade lower than "C" in a course required in a major or minor in the department, the student must repeat the course. Credit will only be awarded once for a course that is repeatable. The student must also repeat the course before enrolling in any course for which it is a prerequisite.

New Note: Communication and Journalism majors may declare only one minor in the department. No more than two courses may be used to meet the requirements for both a major and a minor in the department. (Exception: If a student elects either the Advertising or Event Planning and Production minor, then three courses may be used to meet the requirements for both the major and that minor in the department.)

Courses and Descriptions

COM 102 Introduction to News Writing 3 Credits

Introduces students to routines of journalism, including reporting, writing and preparing content for print and web. Incorporates contemporary practices in multimedia journalism, including digital audio, video and photos, into traditional skills, with an emphasis on accuracy, clarity and professional style and voice. Class exercises are completed in a laboratory newsroom.

COM 103 Intro Comm Studies:theory&prac 3 Credits

Provides a foundation for the study of communication across the discipline. Open to freshmen only, it is designed to assist the first year student majoring in communication or journalism to gain a broad understanding of the scope and breadth of the field. Fundamental communication theories, principles, concepts, terms, and issues are introduced.

COM 104 Speech Communication 3 Credits

Examines basic communication principles and strategies of public speaking. Various genres of oral communication are studied, with an emphasis on extemporaneous and impromptu forms of delivery. Students research, prepare, and deliver speeches that are then used as the focal point for the discussion of effective speaking and listening. A number of speeches are videotaped. Students who received credit for COM 104S may not take this course.

COM 104S Intro to Speech Communication 3 Credits

As part of the EOP program, this course is designed to improve the speaking and language skills of new college students. Through directed practice, students have the opportunity to develop poise and confidence in oral communication, as well as competence in analyzing and synthesizing messages. Emphasis is placed on development, organization, and delivery of speeches. To receive credit, a grade of "C" or higher must be earned. Students who receive credit for COM 104S may not take COM 104.

COM 105 Communication, Culture and Media 3 Credits

Provides a detailed investigation and analysis into the nature, history, scope, adequacy, and limitations of mass communication and examines the reciprocal influence of the media on culture and society.

COM 106 Writing for the Comm Professns 3 Credits

Provides students with written communication writing strategies and tools. Applies theory and practice in communication to targeted audiences. Emphasizes the critical role writing plays in the communication workplace and provides an opportunity to evaluate and respond to real-life writing samples and situations.

COM 107 Writing for the Media 3 Credits

Introduces students to interviewing and persuasive writing techniques for print and electronic public relations and advertising formats. Teaches techniques for creating effective digital audio-visual aids and working with digital audio and video.

COM 131 Fundamentals of Video Production 3 Credits

Introduces students to basic video production theories, techniques, and applications. Students will gain competency in a number of video production areas including: production planning, camera operations, lighting, sound, and digital non-linear editing. Individual and group production exercises will involve planning and executing video productions in both studio and non-studio settings. This class is designed to prepare students from any major to effectively create, produce, shoot, and edit basic video production assignments including public service announcements, video news releases, educational/instructional videos, and marketing/promotional spots.

COM 201 Communication Theory 3 Credits

Explores selected theories, models, and research methods in human communication, the dynamics of the communication process in various settings, and the role of communication in human interaction.

COM 204 Advanced Speech Communication 3 Credits

Provides students with the opportunity to further their study and practice of various types of speech communication. Moving beyond an introductory perspective, this course focuses on the development of critical, analytical, and pragmatic aspects of speech. The focus is divided between the discussion of theoretical models and a demonstrated competence of that material.

Prerequisite(s): COM 104 or COM 290.

COM 205 Theories of Persuasion 3 Credits

Analyzes the motivations that lead individuals and audiences to beliefs and actions and the techniques of achieving objectives through persuasion. Attention, interest, empathy, ethos, fear, and techniques of speakers, and those who use persuasion professionally are studied.

COM 207 Social Media and Social Change 3 Credits

Introduces students to Web/ social media tools and information distribution networks that have enabled people to mobilize new types of collective action, inform publics and advocate positions. Community production and sharing of knowledge (Wikipedia), culture (YouTube, Flickr, the blogosphere), and political organizing (colorofchange.org) are current manifestations of social changes that are continuing to bloom in the 21st century. In this course, Rider University students will become literate in active Web and social media participation with a focus on engaging with current social, political and cultural issues.

Prerequisite(s): COM 201 or COM 205.

COM 210 News Reporting and Writing 3 Credits

Develops skills in hard-news reporting. Employs off-campus reporting assignments to refine information-gathering techniques such as interviewing, observation, and use of government documents and other contextual materials. Includes reporting and writing about police news, state and local government, the criminal justice system, science, business, and sports.

Prerequisite(s): COM 102.

COM 211 Copy Editing 3 Credits

Teaches all phases of copy editing for news and public relations: marking of copy, online editing, fact checking, building and shaping news and feature stories, applying mechanical style, building an ear for graceful English, and safeguarding against legal and ethical problems. Provides comprehensive review of grammar, spelling and punctuation, along with intensive practice in writing headlines and captions and editing wire copy.

Prerequisite(s): COM 102.

COM 212 Publication Design 3 Credits

Explains theories, principles, and techniques of print media layout and design. Provides an understanding of the use of type and art as design elements in various publication formats, such as newspapers, newsletters, advertisements and brochures. Directs students to apply these concepts to the creation of published materials using Adobe Creative Suite.

COM 215 Computer Assisted Reporting 3 Credits

Develops advanced reporting techniques for researching and writing in-depth news stories and investigative articles. Uses state-of-the-art computer-assisted reporting methods including finding and mining data bases on the Internet, creating spreadsheets to analyze data, and employing data base manager software to sort and summarize information in government documents and other specialized resources. Focuses on conceptualizing of story ideas, planning major projects, gathering information by means of data bases, participant-observation, interviews, and analysis of public documents. Emphasizes organizing large quantities of material and presenting it in a meaningful context, including with information graphics.

Prerequisite(s): COM 102 or permission of instructor.

COM 220 Voice and Articulation 3 Credits

Increases the student's knowledge of the vocal elements of oral communication and improves use of voice and articulation. Introduces anatomy and physiology for enhanced vocal production. Analyzes volume, rate, pitch, quality, phrasing, stress, and inflection. Presents the International Phonetic Alphabet as a means of developing correct articulation and pronunciation. Uses classroom exercises and tape recording for feedback and learning.

COM 230 Radio & TV Communication 3 Credits

Examines the field of electronic communication and its role in society. Scrutinizes the history, technology, structure, and regulation of broadcasting including issues, trends, and the impact of new communication technologies. Introduces basic principles of effective communication in broadcast writing and producing.

COM 233 Writing for Broadcast 3 Credits

Introduces diverse and highly structured writing styles and formats used in writing for broadcast. With focus on effective and creative writing using broadcast style, students will be exposed to the fundamentals of writing dramatic and non-dramatic material for radio and television including station IDs and liners, public service announcements and commercials, news and public affairs programs, and short dramatic and documentary scripts. Through lectures, case discussions, in-class assignments, and critiques, emphasis will be on the practical application of basic rules and conventions common to broadcast writing from copy preparation to on-air delivery.

COM 234 Audio Production 3 Credits

Provides a laboratory study of audio production techniques, and performance. Introduces the fundamental properties of sound as applied in modern audio production at radio and television stations, sound studios, and production houses. Students conduct lab exercises in editing, mixing, and digital recording using ProTools. Students perform a variety of genres including news, commercials, dramas, and promos.

COM 235 Digital Filmmaking 3 Credits

This course will provide students with an introduction to basic narrative film production including theories, techniques and applications. Students will gain competency in a number of film production areas including: idea generation and scripting, production planning, cinematography, lighting, sound and digital editing. Working as individuals and in groups, students will develop and produce short narrative film projects. Students will continue to develop proficiency and mastery of the use of specialized vocabulary of the film industry as well as the ability to analyze film and its narrative structure. In addition students will break down the "narrative" focusing on genre conventions and subtext. Students will additionally examine the relevance of film to society while developing proficiency and mastery in the study of how to create film projects.

COM 236 The Aesthetics of Filmmaking 3 Credits

Introduces students to basic terminology, techniques, theories and criticism commonly used in digital filmmaking. Through lecture, class discussion and screenings, students will learn how film theory, criticism and aesthetics impact the filmmaking process. Students will review and analyze films of different genres; the different approaches adopted by filmmakers; and the various elements and techniques that contribute to the creation of powerful and effective films. Aesthetic elements such as production design, mise en scene, cinematography, lighting, editing, sound design and script development will be introduced and practiced.

COM 240 Public Relations 3 Credits

Introduces current theories and practices of public relations, with emphasis on facilitating two-way communication with various publics. Explores approaches to public relations problems by critically analyzing case studies and applying theories and techniques to realistic situations.

COM 251 Interpersonal Communication 3 Credits

Focuses on the study of various communication concepts and theories and the development of interpersonal skills and sensitivities. More specifically, students will participate in lectures, exercises, and projects while exploring the role and function of relationships in their professional, social, and personal lives.

COM 252 Intercultural Communication 1.5-3 Credits

Develops intercultural communication competence through an awareness and understanding of diverse cultures and their impact on communication. It will introduce students to those general factors that influence communication with people from diverse cultures both internationally and within the United States, and offer a blend of skill development, communication theory, and hands-on application. Note: This course is crosslisted as GLS 252. Students may not get credit for both COM 252 and GLS 252.

COM 253 Organizational Communication 3 Credits

Focuses on the ongoing communication processes in organizations. This course examines how and why organizations develop policies and procedures that both encourage and yet constrain creativity and autonomy in employees. It also introduces various management skills to balance the dynamic in organizations. Finally, the course introduces students to various communication technologies that enable communication processes in organizations. Students will also have opportunities to participate in creating organizational dynamics through role-playing exercises, case studies, and other kinds of experiential learning.

COM 254 Intro to Health Communication 3 Credits

Health communication has been shown to have a positive impact on a number of facets of the medical visit, including patient outcomes, patient satisfaction, and job performance and satisfaction. This course will provide students with tools to implement health communication practices in a healthcare setting in order to improve these areas. In addition, health communication is particularly useful in cross-cultural situations, both in regard to the patient-provider relationship, when the ethnicities of the two parties may be different, and when cultural beliefs may impact a patient's medical wishes. Part of the tools for implementing health communication into the practice setting includes an understanding of the role that culture can play in healthcare and the development of strategies to provide optimal medical care while also respecting cultural intricacies.

COM 261 Web Design I 3 Credits

Introduces students to digital graphics, text, audio and video for Web design using Adobe Creative Suite. Students will learn the basics of audio, video, graphic, and interactive software along with theories of design and perception that underlie effective presentation of digital messages.

COM 262 Graphic Imaging for Digital Media 3 Credits

Teaches students techniques for image development, and image preparation for various multimedia applications. Emphasis is placed on color calibration and palette issues, image manipulation, advanced image selection techniques, transparency and masking, multimedia authoring file formats, and dynamic image design. Students will be expected to participate in critiques of professional designs in order to learn to critically evaluate their work and their fellow students' work.

Prerequisite(s): COM 261 or permission of instructor.

COM 263 History and Principles of Graphic Design 3 Credits

Covers the history and principles of graphic design from analog art through the digital revolution. The elements and principles of design will be used to study stylistic progressions, artistic techniques, design innovations, and mechanical inventions. Material will be presented through a combination of illustrated lectures and discussions.

COM 264 Intro to Media Convergence 3 Credits

Introduces the ways that the merging of media industries and the intersection and integration of various media platforms and technologies impact our lives. While the primary focus will be on digital and mobile technologies and practices, the course will also cover the convergence of digital technologies in a wide range of media areas, including journalism, social media, television and entertainment. The course will offer students broad conceptual frameworks for thinking about how the emergence and evolution of digital as well as mobile communication technologies have changed the communication and journalism industries and how they are reshaping content. In addition, the course is intended to allow students to use different digital communication technologies.

COM 265 3D Graphic Animation 3 Credits

Provides students with an introduction to the basics of 3D graphic animation techniques including modeling, texturing, rendering, visual effects and animation. Through various projects the students will learn: to model characters, sets and props, how to apply textures and color to their models, and how to bring their creations to life using various animation techniques. In addition to the technical aspects of creating successful animation, the students will also learn the aesthetics of animation in regard to cinematography, art direction, lighting, character creation, prop creation, and set creation, dramatization and narrative.

COM 270 Sports Multimedia Reporting 3 Credits

COM 270 Sports Multimedia Reporting. Develops skills in hard-news sports reporting, game coverage, and the production of introductory multimedia and social media sports content. Employs out-of-the-classroom reporting assignments to refine information gathering techniques such as interviewing, observation, and use of documents and other contextual materials. Includes reporting and writing on sports games, teams, players, coaches, athletic issues/controversies, and the business of sports.

Prerequisite(s): COM 102. Introduction to News Writing.

COM 280 Issues in Event Planning 3 Credits

Offers students education in event planning, production, and supervision for varied professional applications. Emphasis will be placed on planning, budgeting, and organizing small and large events for educational, institutional, non-profit, and professional groups. Students will participate in the entire process of event planning, with specific experiences in applying communication theory to actual projects.

Prerequisite(s): COM 240 or MKT 200.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

COM 291 Documentary Film and Video 3 Credits

Surveys the history of documentary film, including reportorial, exploratory, persuasive, symphonic, compilational, reflexive, and fictional traditions through screenings, lectures, and readings. Provides practice in film criticism. Explores philosophical questions about the relationship between non-fiction films and videos and the reality they purport to record. Analyzes ethical problems of filmmaking.

COM 301 Communication Law 3 Credits

Critically examines the legal limits and privileges affecting freedom of expression, especially in publishing, advertising, film, telecasting, and cyberspace. Places particular emphasis on the historical and philosophical foundations of the freedoms and limitations of communication in the United States.

COM 302 Communication Ethics 3 Credits

Analyzes internal and external pressures on the communication professional including economic, cultural, social, and political pressures, assesses the philosophical and practical basis for responding to such pressures, evaluates contemporary media responses to these pressures, identifies those that are of laudable quality and why, and provides guidance as to how individuals and organizations can think and react ethically. Issues addressed include censorship, confidentiality, conflicts of interests, minority and ethnic groups, privacy, sensationalism, and self-criticism.

COM 312 Spe Topics in Jour Writing 3 Credits

Provides students with the opportunity to explore specialized topics in journalistic reporting and writing. Each course will focus on a specific area in the broad field of journalism. Examples include business reporting, health reporting, and sports reporting.

Prerequisite(s): COM 102 or COM 107.

COM 316 Feature Writing 3 Credits

Focuses on problems and requirements of newspaper, magazine, public relations, and free-lance nonfiction writing. Students write features designed for acceptance in print, broadcast and digital media and learn marketing techniques.

Prerequisite(s): COM 102 or COM 107, English writing concentration, or permission of instructor.

COM 318 Gender and Communication 3 Credits

Focuses on interactive relationships between gender and communication in contemporary American society. It connects theory and research with practice to explore multiple ways communication in families, schools, media, and society in general creates and perpetuates gender roles. It is designed to heighten students' awareness of how we enact socially created gender differences in public and private settings and how this affects success, satisfaction, and self-esteem. Note: This course is crosslisted as GND 318. Students may not get credit for both COM 318 and GND 318.

COM 322 Argumentation and Debate 3 Credits

Investigates the theory and practice of speech communication that seeks to persuade by inferential argumentation. Concentrates on theories, practices, and research in argumentation and debate, blended with speaking experience in analyzing and advocating controversial topics.

Prerequisite(s): COM 104 or COM 290.

COM 323 Oral Interpretation of Lit 3 Credits

Provides an orientation to the field of oral performance. Students select literary texts, adapt the material to the audience and prepare it for presentation. Emphasizes the development of voice, articulation, and kinesic behavior. Presentations to the class are critiqued.

Prerequisite(s): COM 104 or COM 290 or permission of instructor.

COM 328 Sitcoms and American Culture 3 Credits

Provides an overview to the unique and highly structured form of the American television situation comedy. The primary focus will be on history and development with in-depth study of situation comedy themes, characters, and settings. Through lectures, case discussions, in-class assignments, and class projects, students will examine the social and cultural meanings and implications of this incredibly popular and durable genre of programming.

COM 330 Documenting Cultures Thru Travel 3 Credits

Offers students, through travel and study, a unique opportunity to gain firsthand experience of a foreign culture and to learn how to record and document their experiences using multiple media, including print, audio, video, photography and/or the Web. While traveling, students will be required to attend lecture/discussion sessions, site tours, and other planned activities. This experience will be preceded and/or followed by additional academic work to be conducted on campus. Study topics may include aspects of the historical, social, economic, political and aesthetic cultural components appropriate to the location(s) to be visited. The travel component of the course will be scheduled to avoid conflict with normal semester offerings. No foreign language skills are required.

COM 331 Television Production 3 Credits

Explores the technological capabilities and limitations of the television medium in team productions using a range of styles and formats. Students learn principles of studio production, electronic field production, and electronic news gathering. Exercises include use of computer graphics, audio production, and non-linear video editing. Stresses electronic communication skills and aesthetic values in a professional production setting.

Prerequisite(s): COM 230.

COM 333 Broadcast Programming 3 Credits

Analyzes the theory, practice, structure, and function of broadcast programming. Examines the structure of the industry as it relates to entertainment, information, and the audience. Studies program categories, formats, genres, trends, consistency, accountability, and ratings as well as cable, satellites, and home video. Critical standards are developed by introducing humanistic and scientific modes of program analysis.

Prerequisite(s): COM 230.

COM 335 Television Field Production 3 Credits

Provides an in-depth study of advanced techniques in Field Production for television. Individual and group field production assignments will involve planning and executing single camera production in a non-studio setting. Previously developed video production skills will be refined, and students will gain increased competency and sophistication in all areas of field production including: production planning, camera operations, lighting, sound, and digital non-linear editing. Designed to prepare students to effectively function in the industry as a member of a professional field production team. In field situations, students create, produce, shoot, and edit documentaries.

Prerequisite(s): COM 331.

COM 337 Music Productn for Mass Media 3 Credits

Offers students education in audio production techniques for music and other advanced audio material. Building on theory and practice introduced in the prerequisite, the class will instruct students in the theory behind acoustics and electronics as well as the digital tools and media. Those theoretical studies will be put to practice through exercises in recording music, making selections from music libraries, multi-track recording, arranging, editing, mixing and mastering. Students will begin to develop both an engineer's attention to audio detail and a musician's sense of artistry. Putting these skills to use, the students will produce complete musical works of varying musical styles, working both individually and in teams.

Prerequisite(s): COM 234.

COM 338 Writing for Broadcast II 3 Credits

Building on COM 233 Writing for Broadcast, this course provides a hands-on approach to more sophisticated reporting and interviewing techniques and writing formats used in long-form radio and television programs. This course will expose students to the following broadcast script writing areas: features, documentaries and reality programs. It will also cover writing for interview/talk show programs, music, comedy and variety programs. Students will also be exposed to writing for corporate, educational and children's programming. Students will have hands-on experiences writing, producing and editing news pieces and webcasts for student and area media outlets and web sites.

COM 341 Publicity Methods 3 Credits

Applies communication theory to writing and editorial processes and production techniques to create public relations materials; includes press releases, industrial publications, social media, trade publications, brochures, newsletters, stockholder reports, and multimedia platforms.

Prerequisite(s): COM 107, COM 240, or permission of instructor.

COM 347 Sports Media Relations 3 Credits

CCritically examines the symbiotic relationship between the mass media and professional sports franchises and major college athletic programs. This course deals with the workings and processes behind executing the proper techniques of sports information and media relations, as well as an analysis of the culture of sports in modern society. Students will develop a practical focus on sports information and promotion, including the role of the sports information director and events promoter, with emphasis on advanced concepts of public relations, publicity and marketing.

Prerequisite(s): COM 240 or permission of instructor.

COM 348 Communication Research Methods 3 Credits

Introduces students to the research methods used to study communication problems and processes. Students will learn how researchers plan and design research studies, explore the methodological considerations of both qualitative and quantitative methods, and have an opportunity to gain hands-on experience in conducting research on communication-related issues.

Prerequisite(s): COM 105.

COM 350 Team & Group Communication 3 Credits

Examines the communication process as it relates to the small group. Theoretical constructs including motivation, group climate, attraction, leadership, decision making, problem solving and roles are analyzed. Utilizes group experience to study and evaluate the dynamics and effectiveness of interpersonal systems.

COM 352 Chinese and American Intercultural Commu 3 Credits

Instructs students about Chinese culture and communication. Culture impacts communication practices and styles in significant and subtle ways. Through readings, lectures, discussions, and first-hand interactions with Chinese international students, the students of this course will gain both conceptual and practical understanding of major communication differences between the two cultures, and become a more skilled intercultural communicator. Note: This course is crosslisted as GLS 352. Students may not get credit for both COM 352 and GLS 352.

COM 353 Nonverbal Communication 3 Credits

Investigates studies in and theories of nonverbal communication. Lectures and experiential activities explore the effect of status, culture, and gender upon kinesics, physical characteristics, proxemics, tactile communication, paralanguages, artifacts, and environmental factors.

Prerequisite(s): COM 104 or COM 290 or permission of instructor.

COM 360 Adv Publicatn Design & Present 3 Credits

Builds on elementary knowledge of graphic design to teach the principles of advanced layout, and computer graphics. Introduces students to industry standard drawing software and builds on their knowledge of layout software gained in the prerequisite course. Provides an understanding of the use of logos, infographics and magazine layout, and of the theoretical bases of color for print production.

Prerequisite(s): COM 212.

COM 361 Photography 3 Credits

Using digital SLR cameras, introduces students to professional methods of shooting varied subjects while applying a range of compositions and styles. Using Photoshop, students edit images for publication in print and on the Internet. Hands-on coursework is grounded in theory, history, aesthetics, and ethics. Some cameras are available for loan from the University.

Prerequisite(s): permission of instructor.

COM 363 Converging Digital Media 3 Credits

Examines the digital technologies that make up the new world of digital convergence. The course will examine the effects of digital media convergence on social life, ethics, industry, and local and global communities through a variety of theories and paradigms. This course will also help students develop necessary digital media production skills and use them critically to solve media development problems.

COM 364 Web Design II 3 Credits

Equips students with the theories and practical techniques required to produce effective digital text, graphics, and animations for the Web. Discusses theories behind the use of these media in terms of effective communication and interaction. Introduces students to different computer platforms and requirements for cross-platform media.

Prerequisite(s): COM 261 or permission of instructor.

COM 365 Graphic Animation 3 Credits

Offers students education in graphic animation theories, animation development techniques, and animation preparation for various multimedia applications. Emphasis is placed on the design principles in animated communication and animation techniques. The course covers the integration of static images in animation, graphic animation techniques, animation compression, animation rendering, input/output file formats, and animation delivery. The primary software for this course is Adobe Photoshop and Macmedia Flash. Students will be expected to participate in critiques of professional animation designs in order to learn to evaluate critically their own work and their fellow students' work.

Prerequisite(s): COM 262 or permission of instructor.

COM 366 Project Management in Graphic Design 3 Credits

Explores the creative process of graphic design while developing an understanding of the methods employed in problem solving in the industry standard design software packages. Students learn how to create a hierarchy of information through the ordering of elements into a comprehensive visual unity. They consider the relationship between content and page size, proportion, grid and margins. Students learn about typography as a design element and how it works with other visual elements in design. In order to develop an understanding of the project-planning process for either printer or Web projects, students will develop and present a series of projects that will build on one another to develop their "visual voice." Students will be evaluated on their ability to apply course material to the projects to create professional-quality work; their ability to apply exchange ideas and accept and apply constructive criticism; and on their participation in class discussions, critiques and presentations.

Prerequisite(s): COM 262, COM 360.

COM 367 3D Graphic Animation II 3 Credits

Continue to learn the techniques of 3D computer animation including modeling, texturing, rendering, visual effects and animation. In addition to the technical aspects of creating successful 3D animation the students will also learn the aesthetics of animation in regard to cinematography, art direction, lighting, character creation, prop creation, and set creation.

Prerequisite(s): COM 265.

COM 370 Sports Television and Field Production 3 Credits

Provides an in-depth study of advanced techniques in sports field production for television. Individual and group field production assignments will involve planning and executing single camera production in a sports setting. Previously developed video production skills will be refined, and students will gain increased competency and sophistication in all areas of sports field production including: production planning, camera operations, lighting, sound, and digital non-linear editing. Designed to prepare students to effectively function in the industry as a member of a professional field production team. In field situations, students create, produce, shoot, and edit sports content.

Prerequisite(s): COM 131.

COM 371 Sports Feature Writing 3 Credits

Focuses on developing reporting and writing skills for newspaper, magazine, public relations, and free-lance nonfiction sports writing. Students will study published examples of outstanding sports feature writing, and write their own sports feature articles with social media and multimedia components. Instead of traditional game coverage, this course focuses on covering sports personalities, issues and themes.

Prerequisite(s): COM 102, COM 270.

COM 380 Television Production Practicum 3 Credits

Provides a workshop dedicated to the planning and creation of professional caliber television content for the campus television network and beyond. This course will provide an opportunity for students to develop writing, graphic, audio, video design and production skills in an experiential setting. Students will create materials to be used by the Rider University Network and for broadcast, cable and Internet distribution. Students can be involved in any and all phases of creating content from project conception through implementation. Students will gain valuable experience with, a greater appreciation for, and increased competency in creating professional media content. This class will also prepare students to more effectively function in the communication industry as an effective member of a professional production team. Since topics will vary by semester and instructor, this course may be repeated once.

Prerequisite(s): permission of instructor.

COM 390 Communication and Society 3 Credits

Examines in a topical manner the influence of communication upon significant issues and movements affecting people and society. Investigates interpersonal and mass media factors as they relate to a major issue such as changing sex roles, radicalism, racism, evangelism, election campaigns, and technology. May be taken more than once with different emphasis.

COM 391 Communication Criticism 3 Credits

Investigates and analyzes various methods of communication criticism and their applications to the understanding and evaluation of public and media discourses. Introduces theories and perspectives to assist in the analysis of those discourses. Methods include Aristotelean, Burkean, and ideological criticism.

COM 392 Media History: Personalities and Trend 3 Credits

Presents in a topical manner the history of the media from various perspectives, seeking to place the material into a meaningful economic, cultural, political, and/or social context. Different issues and related individuals are examined, such as the golden age of radio, motion picture economics, and media empire builders, with a view toward understanding their significant impact on the development and functioning of the media today. This course may be taken more than once with a different emphasis.

COM 393 International Communication 3 Credits

Examines mass media systems and their influence on international communication. Emphasizes media systems of major political powers such as Russia, China, the European community, the United States, and geo-political centers such as Africa, Asia, the Middle East, and Latin America. Using a seminar format, the course explores how a nation's mass media reflect its socio-political environment and national values. Focuses on the international images constructed by the mass media. Note: This course is crosslisted as GLS 393. Students may not get credit for both COM 393 and GLS 393.

COM 399 The Co-Operative Experience 3-12 Credits

This course provides a significant work experience to support the professional development of the student and complement theoretical and classroom learning. Students will be assessed based on measures as defined in a placement contract mutually agreed upon by the sponsoring faculty member, the organization representative of the placement site, and the student. Approximately 360 hours of work will be required as students work typically four days per week over at least eight weeks. The proposed placement contract requires departmental approval and the approval of the appropriate office of the dean. It is expected that the Co-op program consume the student's academic load for the semester. Final placement will be determined by the organization where the student will work. Rider University does not guarantee that every student applying for a co-op will earn a co-op placement. Contact the appropriate department for additional information. Prerequisite(s): junior standing and 2.75 GPA at the time of registration; Pass/fail.

Corequisite(s): IND 398 The Co-operative Experience Seminar, IND 398 and (dept) 399 combined cannot exceed 15 credits.

COM 400 Senior Seminar Communication 3 Credits

Provides students with the opportunity to explore critical issues in communication and journalism in a dynamic and engaging context. Students conceptualize problems, develop hypotheses, review literature, design appropriate techniques of inquiry, conduct their research, and present their findings orally to the seminar and in writing to the instructor. Senior journalism and communication majors only.

COM 402 Directing for Film 3 Credits

This course approaches directing both creatively and critically, and examines the role and importance of the director to the filmmaking process. The transformation of the written script into a film is explored through readings, viewing and analyzing the films of accomplished directors. Lectures and exercises illustrated with film clips and readings emphasize plot development, script analysis, developing storyboards and shot lists, rehearsal, blocking, collaborating with talent and production crew, and using the camera to effectively capture action and performance. Students will gain an effective understanding of the role of the director through the various stages of film production, and be provided the opportunity to demonstrate and cultivate his/her effectiveness as a director through individual and group assignments.

Prerequisite(s): COM 235 and COM 338.

COM 415 In-Depth Reporting 3 Credits

Utilizes advanced tools and techniques of contemporary in-depth reporting for print and multimedia. Covering multifaceted stories, students will learn how to do balanced multi-sourced field reporting and writing using primary and secondary sources including human sources, electronic documents and databases, both online and offline. Emphasis will be placed on writing stories that answer not only who, what, when and where questions but also the why, the how and the "so what?" questions. Students will also be exposed to some of the best investigative work of journalists past and present as models for analysis and discussion.

Prerequisite(s): COM 210.

COM 431 Adv TV Research & Production 3 Credits

Explores the theoretical and practical application of aesthetic technique in modern television/video production situations. While the prerequisite courses emphasized competency in equipment operations and basic production skills, this course moves to a higher platform by emphasizing concepts of production and how to apply them for effective communication. Thus this course places emphasis on advanced techniques: design and aesthetics as applied to enhance the overall video presentation as practiced in both the commercial and organizational communication arenas. In the current state of the art of video production, a mastery of aesthetic skills is necessary for the effective expression of ideas in optimal fashion and for a variety of audiences. Students will be exposed to as many techniques as practical through class discussion (including heavy participation by the student), individual and group lab activities and contact when possible with current practitioners and equipment. As most television production is done for a client, that process will form the basis for much of the course discussion and activities including projects.

COM 434 Advanced Radio Production 3 Credits

Provides in-depth study of advanced techniques in audio recording and radio programming and production. Individual and group production of short and long-form radio projects including: promotional spots, features, music programming, and news. Students will be involved in all phases of programming and production for radio including: project conception, development, management, and implementation. Selected student projects will air on the student radio station, 107.7 The Bronc.

Prerequisite(s): COM 234.

COM 435 Advanced Digital Filmmaking 3 Credits

This is an intensive hands-on course in advanced digital filmmaking. Students will gain experience with and proficiencies in a number of filmmaking areas including: creativity, production planning, aesthetics, scripting, script breakdown, camera movement, selecting and directing talent, creating scenes and sequences, visualizing action, establishing mood and conflict, as well as advanced lighting, sound and digital editing techniques. The students' use of high definition digital imaging systems as a medium for narrative cinematography will be developed and refined. In addition, students will explore how filmmaking techniques and technology can impact the visual story telling process. While often working cooperatively in groups, modeling the interdependent structure of film crews today, the creative and leadership role of the director in the contemporary film industry will be emphasized. Throughout the class, there will be an important integration of theory and practice which will enable students to produce meaningful film projects that will not only be technically effective, but strong in content and context as well.

COM 440 Cases & Campaigns in PR 3 Credits

Critically analyzes public relations case problems in industry, labor, education, government, social welfare, and trade associations. Emphasizes problem solving through the use of communication theories, public relations techniques, creative thinking, and the development of professional goals and standards. Employs realistic simulation exercises and actual case studies to develop and critique students' ability to demonstrate this knowledge in professional situations.

Prerequisite(s): COM 341 or permission of instructor.

COM 452 Seminar in Communication Studies 3 Credits

Offers an in-depth investigation of relational communication. Students explore the many complexities involved in human interaction and interpersonal dynamics. Social and psychological implications of various communicative relationships ranging from cross-gender communication to dysfunctional family systems to intercultural interactions are included. **Prerequisite(s):** COM 348, COM 350, or permission of instructor.

COM 460 Web Design III 3 Credits

Builds on previous courses to refine students' understanding of theories and procedures of digital media development. Further develops Web site creation and project management theories. Students develop advanced Web creation techniques, including responsible site production.

Prerequisite(s): COM 364.

COM 462 Advanced Graphic Design and Portfolio 3 Credits

Explores the processes of graphic design by creating independent and creative solutions to a series of design problems. Students expand their proficiency in all aspects of the design process, including creative brainstorming, conceptualizing, critical thinking and presentation. Students take a design project to both print and digital formats using Photoshop, Illustrator, and InDesign. Students develop and present a balanced portfolio as the culmination of their experience in the course. **Prerequisite(s):** ART 103, ART 105, COM 262, and COM 360.

COM 470 Live Sports Reporting Capstone 3 Credits

Focuses on student production of live, professional-level sports media content. Students will combine reporting, writing, social media and multimedia from live sporting events. Live-coverage will include Rider University teams and regional or professional sporting events. The course is open to senior Sports Media Majors, or with the permission of the instructor.

Prerequisite(s): COM 370, COM 371.

COM 490 Independent Research and Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

COM 491 Internship in Communication 1-4 Credits

Places qualified students in a professional area related directly to their communication training. Students may intern in a communication position with a corporation, small business, media outlet, public relations agency, non-profit organization, political party, sports organization, or other similar organizations. A minimum of 50 hours of internship per credit is required. Written reports, a final project, and supervisor evaluations are used to analyze and evaluate the experience. For students majoring in the Department of Communication and Journalism only, primarily juniors and seniors. No more than two internships are permitted for each student; exceptions may be made. The deadline for registration is the first Friday of the semester.

Prerequisite(s): 3.2 GPA and permission of instructor.

Latin American and Caribbean Area Studies

Program Overview

This minor helps students immerse themselves in diverse and rich cultures. The students will also have an advantage for future careers by having a higher fluency in the Spanish language and in having achieved a heightened sense of global and cultural awareness.

Degree Offered

- Minor in Latin American and Caribbean Area Studies

Total Credits	21

- ¹ Students who place out of SPA 200 must take SPA 201 and one additional Spanish course at the 300 or 400 level. Students who place out of SPA 200 and SPA 201 must complete one Spanish course at the 300 or 400 level.
- ² Spanish majors and minors may only take one area-specific course from their major or minor program.

Student Abroad or domestic experience within a Spanish linguistic context or business environment – study, service-learning or internships – may meet some of the requirements upon consultation with the student's advisor. Students must take at least one course in the Latin-American and Caribbean Area Studies Minor upon completion of Study Abroad or a domestic experience as described above.

Independent Research and Study courses and Baccalaureate Honors courses may be substituted in consultation with the Area Studies Program director.

GND 310 Special Topics 3 Credits

Studies in specialized areas pertaining to gender and sexuality. Topics change according to instructor and are listed in the course roster.

Prerequisite(s): one previous course in gender and sexuality studies or permission of instructor.

HIS 282 Colonial Latin America 3 Credits

Examines the pre-Columbian and colonial periods of Latin-American history. Discusses the Indian, African, and European peoples and pays particular attention to the colonial Spanish and Portuguese societies from their establishment up to the revolutions that brought about political independence.

HIS 283 Modern Latin America 3 Credits

Considers the post-independence history of Latin America, emphasizing the rise of export economies and external economic domination, modernization, and pan- Americanism. Examines the changes undergone by Latin-American nations in the 20th century through an analysis of Mexico, Argentina, Chile, Brazil, Peru, Cuba, and Central America.

HIS 284 Caribbean History 3 Credits

Analyzes the history of the West Indian islands and the lands bordering the Caribbean Sea from pre-Columbian times to the present.

IND 210 Global Encounters: Special Education Abroad: A Comparative Experience 3 Credits

This course is designed for students enrolled in the Interdisciplinary minor in Special Education to participate in an international learning experience focused on exploring educational opportunities for individuals with disabilities abroad. Through this cross cultural experience, candidates will broaden perspectives and develop cultural awareness, knowledge, and understanding of diversity.

IND 316 Nature's Business 3 Credits

This interdisciplinary, team-taught, experiential learning course brings together various science, liberal arts, and business perspectives in examining the relationships among biological, social, environmental, economic, geological, and political issues. Topics to be discussed and researched by students can include, but are not limited to, ecotourism, sustainable development, biodiversity, local and regional environmental and historical geology, cultural norms, and the legal and political systems of the country being visited. The study tour component of the course provides students with a first-hand opportunity to observe and record field data from settings outside of the United States and in their discipline of interest. Typically, there are approximately 12 hours of pre-trip lectures, seminars, and/or faculty/student presentations during the fall semester, an international study tour, 9-14 days in length, during January (exact dates and length depend on the international location), and approximately three hours of post-trip meetings, seminars, and student presentations during the spring semester. Students enroll in the course during the spring semester. Note: This course is cross-listed as CBA 316; Students may not get credit for both CBA 316 and IND 316. For Business students who take the course as CBA 316, the course will count as a business course. If taken as IND 316, the Business student will receive credit as a liberal arts and science course.

Prerequisite(s): Permission of Instructor.

LAC 420 From Colonies to Nations 3 Credits

This course consists of a panoramic survey of Colonial and Post-Colonial Latin American literature in light of the unique social, cultural and political history from the pre-Columbian to the Independence period (1825). The approach brings together vivid accounts of places and events, speeches, profiles, oral histories, excerpts from a wide range of literature, policy papers, and other readings. The analysis and discussion of selected literary works and representative films will show how Latin American and Caribbean artistic and creative endeavors express the social, cultural and political context of the Americas. Videos and films will provide the sights and sounds of this vast and vital region. Note: This course is cross-listed as LAC 420. Students may not get credit for both SPA 420 and LAC 420.

Prerequisite(s): SPA 201, or placement test at 300-level or above or SPA 300 or above.

LIT 340 Hispanic Lit & Film Eng Trans 3 Credits

This course explores literary and cinematic masterpieces in English translation. Attention is focused on their relationship to the intellectual, artistic, and historical background of Spain, Latin America, and/or United States Latino cultures. No knowledge of Spanish is required. Open to Spanish majors, but no credit given toward the specific requirements of the major.

MUS 308 World Music 3 Credits

The student is introduced to selected world cultures by listening to and analyzing specific music that is indigenous to each culture. The position and importance of the music within each society will be the main focus of the investigation. Comparing this music to the music of our American culture will provide a basis for judging and interacting with unfamiliar world cultures.

POL 272 Politics of Latin America 3 Credits

The course will begin by discussing Latin American nations from the point of view of their common ancestry in European colonization, including the ways in which European cultural and economic patterns were introduced into indigenously populated areas, how these persisted after independence from European imperialist regimes and the U.S., and how these legacies have their continued effects into the present. The course continues with inquiry into the domestic politics and governmental systems of a number of Latin American nations. The course also takes up present day relations between Latin American political systems, the United States, and various organizations of the global economy such as International Monetary Fund, the World Bank, and the World Trade Organization.

SOC 341 Developing Societies 3 Credits

Examines theories explaining patterns of development; indicators and measures of social well-being; and problems such as population, hunger and environmental crises in developing countries. Focuses especially on patterns of development in Latin America or China.

Prerequisite(s): SOC 101.

SPA 200 Spanish III 3 Credits

An intensive review of Spanish grammar with emphasis on aural-oral (listening and speaking skills) and composition writing. Literary and cultural readings will be used to develop these skills. A special section may be offered to address the needs of native speakers. Students may be required to work with audio and/or video materials and online sources.

Prerequisite(s): SPA 101 or placement test.

SPA 201 Spanish IV 3 Credits

A continuation of Spanish grammar review with emphasis on aural-oral and written skills to prepare students for further study. The discussion of distinctive cultural aspects of the Hispanic world is an integral part of this course.

Prerequisites: SPA 200 or placement test.

SPA 301 Spanish for Business 3 Credits

A solid foundation in business vocabulary and cultural concepts; situational practice in geographic and cultural contexts necessary to be successful in today's Spanish-speaking world. Practice in writing business letters and other documents. Oral and written assignments to help students improve their critical thinking and become better communicators.

Prerequisite(s): SPA 201, placement test at 300-level or above or SPA 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

SPA 311 Latin American Latino Culture 3 Credits

A panoramic survey of Latin American cultural achievements in light of the unique social and political history from the pre-Columbian period to the present. The cross-cultural perspective includes a study of Latino culture in the United States. Classes are in English. No knowledge of Spanish is required.

SPA 325 Intro to Latin-Amer/Latino Lit 3 Credits

A study of the development of Latin-American and Latino literature from its origins to the present through the reading, analysis and discussion of representative works by major authors. This course increases the understanding of how social, historical, and political events, together with native as well as foreign literary movements, create a unique literature, conveying the Hispanic-American reality. Required for majors.

Prerequisite(s): SPA 201, placement test at 300-level or above or SPA 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

SPA 412 Hispanic Theater and Film 3 Credits

This course explores through theater and cinema the compelling issues that have shaped Hispanic cultures and consciousness throughout the centuries. Sample topics include war and remembrance; myth and history; freedom and authority; immigration; globalization; and race, class, and gender. The course may focus on specific authors or historical periods. Representative playwrights include Lope de Vega, Zayas, Zorrilla, Avellaneda, Lorca, Buero Vallejo, Sastre, Solorzano, Carballido, Lopez Mozo, and Pedrero. Directors include Buñuel, Saura, Gutiérrez Alea, Almodovar, Rocha, Salles, Erice, Zambrano, and Bollain.

Prerequisite(s): SPA 201, placement test at 300-level or above or SPA 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

SPA 413 Hispanic Short Story: Transatlantic Conn 3 Credits

This course will introduce students to the most representative writers of the short story in Spain and Latin America from Romanticism to the present. Students will be prepared to perform close readings of the literary genre under study, to analyze the form and content of the texts read, paying due attention to all internal and external aspects that impact the narrative process and the evolution of the short story.

Prerequisite(s): SPA 201, placement test at 300-level or above or SPA 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

SPA 420 From Colonies to Nations 3 Credits

This course consists of a panoramic survey of Colonial Latin American literature in light of the unique social, cultural and political history from the pre-Columbian to the Independence period (1825).

Prerequisite(s): SPA 201, placement test at 300-level or above or SPA 300 or above. Note: This course is cross-listed as LAC 420. Students may not get credit for both SPA 420 and LAC 420.

SPA 426 Latin American/Latino Film and Fiction 3 Credits

A study of the main trends in contemporary Hispanic fiction written in Latin America and the United States. Analysis and discussion of selected novels and short stories, and their cinematic representation on film. Required for majors.

Prerequisite(s): SPA 201, placement test at 300-level or above or SPA 300 or above. Exceptions may be made for Study Abroad or native/heritage speakers with permission of chairperson.

SPA 496 Special Studies 3 Credits

A seminar open to a variety of topics treating a particular author, period, genre, or theme.

Prerequisite(s): permission of instructor.

Law and Justice: Criminal Justice and Legal Studies

Program Overview

Rider University's law and justice program houses a major in criminal justice (<http://www.rider.edu/academics/colleges-schools/claes/liberal-arts-programs/law-justice/criminal-justice-major>), as well as a minor in legal studies (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/law-justice-1>) and a minor in criminal justice studies (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/law-justice-2>).

Law and justice courses provide students, regardless of specific career goals, with tools for reasoned appraisal of how the law works and its social consequences and makes students better citizens by demystifying legal institutions and policies, addressing and evaluating these in terms of evidence, rather than myths and assumptions.

Experienced faculty members of the Law and Justice Program Committee (<http://www.rider.edu/academics/colleges-schools/college-liberal-arts-education-science/liberal-arts-programs/law-justice-0>) are available to advise students interested in pursuing a career in criminal justice, law or law-related fields. Faculty advisors may assist students in course selection as well as law school and graduate school applications. The Law and Justice Program often sponsors workshops (<http://www.rider.edu/academics/colleges-schools/claes/liberal-arts-programs/law-justice/student-awards-honors-events-an-0>) on various aspects of career preparation, law school selection, and the law school application process.

Curriculum Overview

The major is designed to provide students with a multidisciplinary understanding of law, its development and violation. Courses in the program include a wide spectrum of academic departments and programs, including business policy, baccalaureate honors, communication, economics, philosophy, political science, psychology and sociology, as well as courses developed specifically for the Law and Justice Program.

The law and justice program's criminal justice major and law and justice minor are designed to provide students with in-depth knowledge and understanding of laws, legal institutions and processes and their relationships to social, moral, political, and economic issues. Students will benefit from learning to approach law (both civil and criminal), and law enforcement from diverse perspectives.

Students can focus their course of study around their specific career goals by selecting from a wide range of courses within the program. In addition, the criminal justice major and law and justice minors can often be combined with other major and minor programs.

3. Philosophy core included in major.

Courses and Descriptions

BHP 211 Seminar: Theories of Justice and the American Common Law 3 Credits

Examines some of the 'perennial' theories of justice, both classical and modern, that have left their mark on the evolution of Western concepts of justice. The practical implications of such theories and the two-way traffic between them and social realities will be explored through their application by the American courts. In addition to studying actual cases, students will participate in the adjudication of theoretical cases, both fictional and taken from contemporary realities.

BHP 322 Hon Sem: Guilty and Innocent 3 Credits

Through the study of social theory and research, legal cases, fiction, non-fiction, film and poetry, this course examines theories of criminal motivation and behavior, determination of blame, and assignment of appropriate punishment. Topics include changes in legal and cultural understandings of individual and social responsibility for criminality; the nature, purpose, and effects of punishment; and the impact of race, class and gender on defining crime and determining guilt or innocence.

HIS 301 Constitutional History of U.S. 3 Credits

Surveys the English, Colonial, and Confederation backgrounds of American law and constitutionalism; the framing, adoption, and implementation of the Federal Constitution and its later development; the role of law in the nation's history; the changing interpretations of federalism; the growth of judicial review; and the increasing role of the Supreme Court.

LAW 140 Intro Seminar in Law & Justice 3 Credits

Introduces students to the interdisciplinary study of law and justice. The seminar is designed to enable students to think critically about legal issues, address legal problems from various viewpoints, and apply different types of theories of justice to analyze laws and legal institutions. Students will learn to examine law and legal issues from a variety of perspectives and approaches: anthropological, historical, literary, philosophical, political, psychological, and sociological. Open to freshmen and sophomores only.

LAW 150 Intro to Forensics 3 Credits

Introduces students to principles of forensic science. Whether the issue is establishing paternity or cause of death, determining arson or liability, or deciding criminal guilt or innocence, collecting and evaluating forensic material is typically involved. Students will learn the meaning and significance of scientific evidence and its role in criminal investigations and civil and criminal trials. Students will learn how forensic scientists work, define a problem, collect data, and analyze results. Case studies, crime simulations and examination of criminal evidence will highlight the application of scientific principles.

LAW 204 Law, Literature, and Film in America 3 Credits

Focuses in an interdisciplinary manner on law and justice as represented in American literature and films. It analyzes novels, short stories, and selected non-fiction texts from the perspectives of literary criticism, social history, and cultural and American studies.

LAW 210 Criminal Investigation 3 Credits

Approaches criminal investigation conceptually. Students consider the social issues involved in criminal investigation, as well as ethical and legal aspects of it. The course covers such topics such as the principles of criminal investigations, the rules and procedures of preliminary and follow-up investigations, the art of interrogation, recording of statements, confessions, and the collection and preservation of physical evidence at the crime scene. Emphasis is placed on the need for meticulous adherence to rules of law and ethical practices, as an investigation proceeds from initial actions to arrest, and eventual prosecution. The course also examines the methods used in scientific interpretation of evidence and the preparation of criminal cases for trials, as well as its role in today's criminal justice system.

Prerequisite(s): LAW 150.

LAW 302 Crime & Justice in the Media 3 Credits

This course focuses on the impact of media on Americans' perceptions and understanding of the extent and causes of crime, and the effectiveness and purposes of crime policy. It examines how criminals, types of crime, crime policies and the criminal justice system are portrayed in various media outlets, including film, tv, newspaper, and electronic/internet. It explores the historical and contemporary relationships between media representations of criminal behavior, crime as a social problem, and the nature of the criminal justice system and contrasts these to their social realities.

LAW 304 Women and Law 3 Credits

Explores the social, economic, political and cultural context of laws relating to women and gender, such as workplace discrimination, divorce and child custody and reproductive rights. It examines how such laws have changed historically and the impact such laws have had on women as well as on men and on American social institutions, such as the family, politics, and the workplace. The course also examines women in the legal profession and their impact on the practice of law and legal reasoning.

LAW 305 Trial Advocacy 3 Credits

Students will apply fundamental legal concepts and rules of evidence to specific cases. By engaging in trial simulations, students will evaluate various forms of evidence, identify legal principles and evidentiary rules that impact a criminal trial, learn about trial procedures, pursuit of case theories, and witness, exhibit and jury selection.

LAW 307 Criminal Justice Practice 3 Credits

This course will consider the ways criminal justice agencies and occupations are shaped by social, economic, political, technological and legal changes. Through case studies and projects students will examine the work, culture, and work settings of various criminal justice practitioners, assess the impact of social policies on criminal justice careers, and identify new directions in the field. Students will develop the reading and writing skills needed by an array of criminal justice practitioners.

LAW 310 Cyberspace Law and Policy 3 Credits

Explores the legal and policy concerns raised by the Internet, nationally and globally. The course considers issues of legal regulation of the Internet, and consider the debate about whether cyberspace can or should be regulated. Attention will be given to the applicability of principles of law and models of regulation. Topics addressed will include jurisdiction, freedom of expression, intellectual property, privacy protection, safety concerns, equal access, electronic commerce, and computer crime.

LAW 365 The Rights of the Accused 3 Credits

Analyzes the major substantive and procedural rights accorded to the criminally accused by the United States Constitution. Particular attention will be given to the right to counsel, confessions and self-incrimination, arrest, search and seizure. Students will learn to argue and write hypothetical case opinions.

LAW 401 Hate Crimes in the United States 3 Credits

Provides an interdisciplinary exploration of hate crimes in the United States, its causes and consequences. It will examine the social, political, and legal issues that have shaped policies and laws designed to respond to hate crimes and assess their effectiveness. Debates about the nature of hate crimes and the special laws and sentencing provisions developed to deal with them will be discussed. Topics include hate crimes on college campuses, hate on the Internet, legal and constitutional issues, and criminal justice enforcement.

LAW 460 Criminal Justice Senior Seminar 3 Credits

Draws on and develops students' knowledge and understanding of crime, criminal law and criminal justice institutions, and applies these to a specific topic, method, institution, or controversy. Topics vary. Students will be expected to contribute to seminar discussions and to complete research projects related to the seminar theme. Required for criminal justice majors seniors; open to others only by permission of the director of the Law and Justice Program.

LAW 490 Independent Research & Study 1-4 Credits

Independent Research and Study allows juniors and seniors in good academic standing to investigate topics of interest under faculty supervision. Projects must be approved by the faculty member, department chairperson, and academic dean no later than the third week of the semester in which the project is to be conducted. Only one project can be scheduled in a semester, and for no more than four semester hours; up to 12 semester hours of independent research and study may be counted toward graduation. Note that individual departments may have additional restrictions.

LAW 491 Internship in Law and Justice 1-4 Credits

Provides supervised work experience in an institution, office, or agency related to law or law enforcement, such as courts, prosecutor/defense attorney offices, private law offices, state agencies, and local police departments. Students are expected to apply and broaden the knowledge obtained from law and justice minor courses to their fieldwork experience.

Prerequisite(s): 2.75 GPA and permission of the Director of the Law and Justice program.

LAW 496 Honors Thesis in Law & Justice 3-6 Credits

Entails substantial research and writing on a topic selected by the student. Proposals must be reviewed and approved by the law and justice program committee. Proposals must be submitted at least four weeks prior to course registration.

Prerequisite(s): Seniors in the minor with a minimum cumulative GPA of 3.25 and a 3.25 GPA in law and justice minor courses.

PHL 115 Ethics 3 Credits

A combined historical and systematic analysis of the problems of ethics. Such problems as the nature and meaning of moral values and judgments, moral responsibility and freedom, conscience and happiness, the good life, and the relativity of value, are explored through the writings of such philosophers as Plato, Aristotle, Aquinas, Kant, Mill, and Nietzsche.

PHL 303 Philosophy of Law 3 Credits

An examination and analysis of selected topics including classical and contemporary theories in the philosophy of law and moral philosophy. Such topics as the nature of the law and legal reasoning, the legal enforcement of morality, protection of personal liberty, and the moral justification of punishment are considered. Such philosophers as Aquinas, Austin, Holmes, Bentham, Hart, and Dworkin are read and discussed.

POL 230 Methods of Political Analysis 3 Credits

An overview of the various qualitative and quantitative methods that political scientists use to study their discipline. Themes include analyses of political participation and support, methods of studying elections, measures of political tolerance and liberalism.

POL 235 Race/Ethnicity in Amer Politic 3 Credits

Examines the changing political, economic, and social situation of racial and ethnic groups in American politics since the 1950s. Topics include the relationship between race/ethnicity and voting behavior, political parties, and election results. Includes an analysis of specific areas of contemporary racial and ethnic conflict, such as voting rights, immigration, and affirmative action.

POL 260 Politics of Law and Order 3 Credits

The constitutional, legal, political, and administrative aspects of the criminal justice system in the United States are studied, including the court system at all levels of government, law enforcement agencies, correctional programs and institutions, probation, parole, and the relationship of our legal institutions to the broader political system.

POL 361 Courts, Judges and Politics 3 Credits

In-depth examination of the nature of judicial decision-making and the impact that judicial decisions have on society. Considers the sources of judicial authority, judicial fact-finding, statutory and constitutional interpretation, individual and collective processes of judicial decision-making, relations between judges and other government officials, and the political consequences of judicial decisions with particular emphasis on federal courts and judges. Note: This course is cross-listed as HLS 361. Students may not get credit for both POL 361 and HLS 361.

PSY 279 Psychology and Law 3 Credits

Introduces students to a study of selected topics in psychology and law. Topics include eyewitness testimony, jury selection, and decision making
Prerequisite(s): PSY 100.

SOC 206 Deviance and Crime 3 Credits

Considers deviant behavior as violation of social norms. Examines the concepts of deviance and crime in socio-historical context. Evaluates major theories advanced to explain deviance. Surveys different types of deviance, including conventional crime, non-criminal deviant behavior, and white-collar corporate, and government crime.
Prerequisite(s): SOC 101.

SOC 216 Youth and Crime 3 Credits

In-depth examination of the nature and extent of youth criminality in the U.S. Explores changes in youth culture and theories of delinquency. Social policies are related to youth criminality and the youth justice system is considered.
Prerequisite(s): SOC 101.

SOC 219 Introduction to Criminal Justice: Police, Courts, Corrections 3 Credits

This course introduces students to the sociological study of the criminal justice system. It examines the cultural and social foundations of this system, and review debates about problems with the criminal justice system and proposals to change it. Topics covered include nature of the crime problem, requirements of criminal law, policing, the role of the courts and legal professionals, sentencing, incarceration and alternatives to it. [FORMERLY SOC-319 Criminal Justice and Corrections] Pre-requisite SOC 101 3 Credit hours.

SOC 246 Drugs, Crime & American Society 3 Credits

Explores the nature and extent of drug use in the U.S., how drugs are legally defined and socially constructed, and considers how and why drug policies have developed and changed historically. Considers how the criminalization of drugs has impacted policing strategies, courts, probation programs, sentencing and corrections, as well as other social institutions. Examines the role of local and federal agencies in enforcing drug laws, and considers debates about directions for legal reforms.
Prerequisite(s): SOC 101.

SOC 301 Methods Of Sociological Research 3 Credits

The second in a series of required courses for majors. Builds upon the Introductory Seminar in Sociology. Social research methods using documents, observations, and questionnaires are taught, and used in completing research projects.
Prerequisite(s): SOC 201.

SOC 313 Gender and Criminal Justice 3 Credits

This course will examine women's experiences with the criminal justice system as offenders, victims, prisoners, and practitioners. It will consider how gender has shaped theories of crime and criminological research. It will explore how cultural constructions of gender have influenced substantive and procedural criminal law, the ways criminal justice agencies respond to crime, and how these have changed historically. Attention will be given to the development of new approaches, reforms, and challenges.
Prerequisite(s): SOC 101.

SOC 317 Law and Lawyers 3 Credits

Relationships between law, the economy, and the state are explored. Discussion of laws, legal systems and legal reasoning using cross-cultural comparisons and historical analysis of these in the United States. Particular attention given to impact of law on corporations, workers, women, and minorities. Changes in legal profession and legal education are examined.
Prerequisite(s): SOC 101.

SOC 321 White Collar & Corporate Crime 3 Credits**SOC 322 Punishment and Corrections 3 Credits**

This course explores the nature, forms, rationales, and effectiveness of punishment as a form of crime control. It traces the development of corrections in the U.S., identifies cultural trends and developments in penology, including mass incarceration and supermax prisons, considers the ways race and class have shaped these, and the reverberating effects penal policies have had on American culture and society beyond the criminal justice system. It examines the role of laws, politics, crime control agencies, as well as of media, and corporations in shaping penal policies. Topics also include: prison subcultures, inmate rights, correctional practices, privatization of prisons, and alternatives to punitive policies of incarceration and capital punishment.
Prerequisite(s): SOC 101.

SOC 342 Police and American Society 3 Credits

This course examines important issues regarding police in American society, such as the paradoxes inherent in police work, police organization and strategies and their effectiveness, the dilemmas of supervising police work, police unionism, the nature and implications of police occupational subculture, the use of police discretion, forms of police misconduct and accountability, professionalization of police and the trend toward police privatization. It also considers the diversity of the police force, trends in the delivery of policing services, the impact of new technologies on policing, and the challenges of policing in a multicultural society.
Prerequisite(s): SOC 101.

SOC 343 Policing and Counter Terrorism 3 Credits

This course is designed as an upper level (undergraduate/graduate) combination lecture and discussion section on the foundations of international security. It will examine the concept of security from both the macro and micro level. We will discuss a mix of security strategies (balance of power, alliances, rearmament, collective security, deterrence), theoretical perspectives on security (Neorealism, Neoliberalism, Critical Theory, Copenhagen School), great power and third world security, democratic and non-democratic security, classic threats (changes in relative power, proliferation) and new threats (environment, population movements, terrorism), and concepts of security ranging from state survival, to societal security, to unit level-variables such as Human Security.
Prerequisite(s): SOC 101.

SOC 345 Race and Crime 3 Credits

Examines the impact of crime policy on minority communities in the United States, with particular attention to the impact of "The War on Drugs", three-strike laws, and mandatory sentencing on minorities and minority communities. Drawing on sociological research, the course explores myths and realities concerning the relationship between race and crime. The relationship between racial attitudes, historical race relations, and mass incarceration are discussed.
Prerequisite(s): SOC 101.

POL 300 U.S. Constitutional Law 3 Credits

The role of the Supreme Court in the American political system is assessed. Topics include the staffing and functioning of the Supreme Court and the federal judicial bureaucracy, the origins and development of judicial review, and the role of the Supreme Court in national policy-making. Note: This course is cross-listed as HLS 300. Students may not get credit for both HLS 300 and POL 300.

POL 301 Civil Liberties in the U.S. 3 Credits

The American doctrine of civil liberties in theory and practice. Emphasis on analyzing the freedoms of speech, press, assembly, and religion, the right of privacy, and the problem of discrimination in the context of contemporary issues and problems. Particular attention to the role of the Supreme Court in this area. Note: This course is cross-listed as HLS 301. Students may not get credit for both HLS 301 and POL 301.

PHL 130 Political Philosophy 3 Credits

An introduction to the problems of political philosophy with an emphasis on recent and contemporary issues, such as the conflict between liberal and conservative ideologies, fascism, revolution, civil disobedience, and the concept of legitimate political authority.

PHL 202 Social Philosophy 3 Credits

Emphasizes social ethics through critical studies of such contemporary problems as abortion, euthanasia, the death penalty, pornography and censorship, animal rights, drug use, sexual morality, environmental ethics, and world hunger.

PHL 360 Contemporary Ethics 3 Credits

An examination of recent and contemporary challenges to traditional ethical theory including such movements as logical positivism, cultural relativism, feminism, environmentalism, multiculturalism, and postmodernism. Such problems as the meaning and cognitive status of value judgments, the relation between fact and value, the relativity of values, and how value judgments can be justified are considered.

PHL 491 Internship in Philosophy 1-4 Credits

Students will work under supervision within an area hospital, corporation, or legal agency. The specific duties and tasks will be developed jointly by the intern, intern agency, and faculty supervisor. Within the hospital setting, students will work with the Hospital Medical Ethics Committee. Within the corporate setting, there will be two types of internships: students will work in the corporate office responsible for addressing the ethical issues that arise in the business environment; or students will work in a department that allows them to explore the potential business applications of their philosophic intellectual training. Within the legal setting, students will work with the federal magistrate, prosecutor, or public defender, exploring issues in the philosophy of law that arise in the practice of law. Students must have completed four philosophy courses, one at the 300 level, before applying for the internship. No more than six credits will be allowed toward graduation. A member of the department of philosophy will supervise the internship.

Prerequisite(s): juniors and seniors with a minimum of 2.7 cumulative GPA and 3.0 GPA in philosophy, or permission of the department of philosophy.

POL 325 Public Administration 3 Credits

Public administration in modern society, emphasizing the administrative formulation of public policy and its implementation. Attention on who gets what, when, and how from the decisions of administrative units; the role administrators have in policy-making compared to elected legislators, chief executives and judges; the effect administrators have on the benefits citizens receive from government; and the effect administrators have on citizens' behavior. Note: This course is cross-listed as HLS 325. Students may not get credit for both HLS 325 and POL 325.

POL 327 Contemp Issues Amer Pub Policy 3 Credits

An in-depth examination of current issues in American politics. Drunk driving, political corruption, drug policy, education, and poverty are among the issues to be considered. Emphasis on analyzing policy problems and on developing and evaluating proposed solutions.

POL 335 Urban Politics 3 Credits

Political structure and administration of municipalities in the United States. Emphasis on problems posed by suburbanization, global and regional shifts in business, economic dislocation, housing, race relations, and policing.

POL 345 Justice 3 Credits

The existence of society over time requires high degree of predictability and hence laws, whether explicit or implicit. These derive their capacity to regulate life from the widespread notion that they are proper and that they should be obeyed. In a word, they accord to our notions of justice. These, however, are not stable. Resting on the understandings of man, society, nature and the relations between them, they develop under the impact of human thought and changing realities. The result is what can be compared to a layered cake. This course treats some of the main contributions made by philosophers from Plato to Rawls to our concept of justice and the manner by which they have shaped our concepts of justice in the US and West in general. Cases in which courts (mainly the US Supreme Court) made use and applied the thinking of earlier philosophies of justice will illustrate the process by which we adjust the boundaries between legality and criminality and determine how we should behave towards each other.

POL 350 U.S. Foreign Policy and Security Policy 3 Credits

Principles, institutions, and processes involved in the formulation and implementation of policies regarding the nation's military, economic, and environmental security within the global framework. Strands, trends, and problem areas in U.S. foreign policy, with focus on the changing global environment of the post-Cold War world. Note: This course is cross-listed as HLS 350. Students may not get credit for both HLS 350 and POL 350.

POL 351 Critical Views of Global Security 3 Credits

This course will examine the foundations of international security. It will examine the concept of security from both the macro and micro level. We will discuss a mix of security strategies (balance of power, alliances, rearmament, collective security, deterrence), theoretical perspective on security (Neorealism, Neoliberalism, Critical Theory, Copenhagen School), great power and third world security, democratic and non-democratic security, classic threats (changes in relative power, proliferation) and new threats (environment, population movements, terrorism), and concepts of security ranging from state survival, to societal security, to unit level-variables such as Human Security. Note: This course is cross-listed as HLS 351. Students may not get credit for both HLS 351 and POL 351.

PSY 220 Abnormal Psychology 3 Credits

The development of abnormal personalities is discussed, with a survey of the various types of mental abnormalities, including their symptoms, diagnoses, and treatments. Neuroses and psychoses are emphasized.

Prerequisite(s): PSY 100.

POL 363 Hum Rights in Global Context 3 Credits

Examines human rights – droits de l'homme, derechos humanos, Menschenrechte, “the rights of man” – are, literally, the rights that one has because one is human. What does it mean to have a right? How are being human and having rights related? This course provides an introduction to theory and global practice of human rights. Human rights claims play an increasingly central role in political and social struggles across the world. The adoption of the Universal Declaration of Human Rights in 1948 signaled a proliferation of international human rights law and transnational non-governmental activism. While the promotion of human rights has become global, adherence to those standards remains highly uneven and gross violations and atrocities continue to occur. Given the breadth and complexity of the human rights movement, including its engagement with law, politics and morals, in radically different cultures, this course is by its very nature multidisciplinary. Note: This course is cross-listed as HLS 363. Students may not get credit for both HLS 363 and POL 363.

POL 491 Internship in Political Science 1-4 Credits

Students work under supervision in a public agency, political party, or public interest group. A minimum of 52 hours of fieldwork per credit required, with regular reports and a concluding critique analyzing and evaluating the experience. Primarily for seniors and qualified juniors. No more than six credits allowed toward graduation.

Prerequisite(s): permission of instructor.

PSY 365 Drugs and Human Behavior 3 Credits

Presents the student with an in-depth analysis of the effects of alcohol and selected chemical substances on the behavior and body of the user. Commonly abused substances will be discussed in terms of their history, sources of production, routes of administration, distribution, metabolism and excretion, neurophysiology, tolerance, properties of addiction, withdrawal course and symptoms, and potential beneficial and harmful effects.

Prerequisite(s): PSY 100.

PSY 491 Internship in Psychology 1-4 Credits

Provides supervised work experience in an approved institution or agency in order for students to gain knowledge in applications of psychology. Placement is made in various community institutions and agencies that offer services to both exceptional and normal individuals.

Prerequisite(s): senior psychology majors or minors.

SOC 205 Families 3 Credits

Examines families in the United States, past and present, emphasizing the variety of family experiences in different social contexts and the relationship between family life and social change. Includes comparative material on families in other countries and considers possible alternatives to current family forms.

Prerequisite(s): SOC 101.

SOC 207 Racial and Ethnic Relations 3 Credits

Examines the social origins of prejudice and discrimination, and analyzes intergroup trends in conflict, competition, and cooperation. Considers issues of immigration, economic and political power, and ethnic, racial, and religious pluralism.

Prerequisite(s): SOC 101.

SOC 245 Social Problems 3 Credits

American social, economic, and political institutions and their interrelationships are analyzed, with an emphasis on the causes, directions, and consequences of social change in American society.

Prerequisite(s): SOC 101.

SOC 308 Cities And Suburbs 3 Credits

Examines the growth of an urban way of life under the influence of industrialism. Study of community, political, and economic institutions in cities. Comparisons between urban and suburban areas.

Prerequisite(s): SOC 101.

SOC 312 Women In Society 3 Credits

Examines changes in women's roles and in male-female relationships. Focuses on impact of law, economy and social movements in shaping women's positions as wives and as workers. Explores theories and evidence concerning the nature and extent of sex differences. Attention to women's socialization through language, schools and media.

Prerequisite(s): SOC 101.

SOC 330 Class and Economic Inequality 3 Credits

Social, economic, and political aspects of the division of society into classes are considered. Theories of stratification and the distribution of wealth, power, and prestige in societies past and present are examined.

Prerequisite(s): SOC 101.

SOC 350 Social Policy 3 Credits

Investigates the relationship between economic development and social policy in comparative and historical context. The main features of preindustrial, early industrial, and advanced industrial social welfare systems are described. Social, economic and political factors that shape social policy are investigated.

Prerequisite(s): SOC 101.

SOC 340 Power and Politics 3 Credits

Examines the nature and distribution of power in contemporary societies; analyzes the relationships between power and politics.

Prerequisite(s): SOC 101.

SOC 396 Applied Sociology 3 Credits

Shows how sociology can be applied in work settings. As participant observers in organizations related to their career objectives, students learn to apply sociological knowledge, perspectives, and skills. In class meetings and individual consultations with the instructor, students examine the applied dimensions of sociology, the uses of sociology in various occupations, the ethical issues involved in applied sociology, and the culture and structure of their work organization.

Prerequisite(s): SOC 101.

Liberal Studies: Environmental Emphasis

Program Overview

The Bachelor of Arts Degree in Liberal Studies: Environmental Emphasis is designed specifically as a second major for students in the School of Education interested in teaching science in elementary schools. The program is tailored to meet the interdisciplinary science objectives of elementary education majors and to facilitate the timely completion of their dual requirements in the School of Education and the School of Liberal Arts and Sciences. This program is not designed to prepare students for further study in science disciplines at the graduate or professional level, or to teach science at the middle or high school level. Students who may wish to teach science at the high school level should

discuss the additional certification requirements needed with their School of Education academic advisor.

Curriculum Overview

The curriculum for this major focuses on the interdisciplinary nature of the environment by offering classes that give students a strong basis of science preparatory material while also offering a unique, interdisciplinary, hands on approach to learning. Students take introductory courses in foundational classes in chemistry, physics, biology, environmental sciences and geosciences, followed by more in-depth course work focused on the environmental sciences.

Honors Program in Liberal Studies: Environmental Emphasis

Graduation with honors in Liberal Studies: Environmental Emphasis is awarded in recognition of majors who have demonstrated outstanding academic ability. Enrollment in the program is by invitation of the faculty of the Department of Geological, Environmental, and Marine Sciences (GEMS). Eligibility requirements include a minimum GPA of 3.5 in courses required for the major and the satisfactory completion of a three- or four-credit independent research and study course. In addition an honors candidate must maintain an overall minimum GPA of 3.0.

Degrees Offered

POL 329	Comparative Environmental Policy	
SOC 225	Population Study	
Total Credits		91-92

Majors will also take either MTH 105 or MTH 210 to fulfill their math core requirement. Upper-level MAR courses require MAR 120 and MAR 121 as prerequisites.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Courses and Descriptions

BIO 100 Life Science: Human Emphasis 3 Credits

An examination of mammalian physiology and development at the cellular and organ system level, with emphasis on physiological homeostasis in man. Three hours of lecture per week.

BIO 101 Life Science:Genetics Emphasis 3 Credits

An examination of cell biology and genetics, with emphasis on the impact of these fields on human affairs. Three hours of lecture per week.

BIO 103 Life Sci:Ecobotanical Emphasis 3 Credits

Plant biology with emphasis on ecological interactions and economic uses. Three hours of lecture per week.

BIO 105 Life Science and Society 3 Credits

This course will highlight current scientific knowledge and the state of ongoing inquiry in often-misunderstood topics related to health and medicine. Topics will include, but are not limited to, stem cells, embryo editing, vaccination, genetic modification of food and animals, and the process of drug development. Throughout this course, students will learn basic cell biology and genetics as a foundation for scientific understanding in itself as well as how to detect misconceptions and myths related to science, healthcare, and medicine.

BIO 106 Life Science:Human Disease 3 Credits

An introduction to molecular, cellular, and human biology with emphasis upon diseases and disorders caused by mutation, bacteria, viruses, or parasites. The biology of human aging is also discussed. Three hours of lecture per week.

BIO 108 Life Sci: Biol of Human Aging 3 Credits

An introduction to the biology of aging manifest in the cells, tissues, and organs of animals and humans. Three hours of lecture per week.

BIO 109 From the Big Bang to Origins of Life 3 Credits

This course is a non-major science core course focusing on the interactions among astronomy/physics, chemistry, geology and biology. A consensus story has emerged about our origins from scientific insights obtained over the last 400 years. Many know this story that began with the Big Bang and proceeded through the origin of the galaxies and the origin of the elements to the origin of our sun, earth and solar system. The origin of the earth gave rise to the origin of life, evolution of bacteria, viruses, plants and animals, creation of ecosystems and ultimately the evolution of humans. We will proceed through the science slowly. By doing so we can take the information from all of the sciences and reflect upon it. The result of will be an enhanced appreciation for both the process of science and the awesome information we have learned about the natural world as well as ourselves. The study of our origins reveals that humans, all life, and our planet are intimately related.

BIO 110 Life Science: Inquiry Approach 4 Credits

An introductory course for non-science majors in which students develop an understanding of biological evolution, the molecular basis of heredity, the cell, matter, energy and organization in living systems, and the interdependence of organisms. In addition, students will develop an understanding of science as a human endeavor, the nature of scientific knowledge, and historical perspectives. Through investigative activities, students will develop an understanding about scientific inquiry and develop abilities necessary to do scientific inquiry. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 110L.

BIO 110L Life Sci: Inquiry Approach Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 110.

BIO 115 Principles of Biology I 4 Credits

An introductory biology course focusing on major themes of biology: what is life?; Cells as fundamental structure and functional unit of life; information transmission, storage and retrieval; Diversity and unity of life explained by evolution. Three hours of lecture and one three- hour lab per week.

Corequisite(s): BIO 115L.

BIO 115L Principles of Biology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 115.

BIO 116 Principles of Biology II 4 Credits

An introductory biology course focusing on major themes of biology: Energy and matter to carry out life's essential functions; Interdependent relationships characterize biological systems (homeostasis, growth & development); Behavior of living things; Ecology and the environment. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 116L.

BIO 116L Principles of Biology II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 116.

BIO 206 The Pharmaceutical Industry 3 Credits

An introduction to drug discovery and development. Topics include how drugs are used to diagnose, cure, treat, and prevent disease and how drugs affect body function. The origins of diseases and the early attempts at treatment are also covered. Designed for business majors; does not satisfy requirements for the biology major.

Prerequisite(s): BIO 100 or BIO 101 or BIO 106 or BIO 108 or BNS 107 or CHE 115.

BIO 210 Hospital Intern Program 2 Credits

An internship that provides students with the experience in the practical aspects of medicine. Major departments in the hospital such as the emergency room, operating room, clinic, radiology, and the laboratory will be open for student rotations. Field trips to various medical schools in the area will provide information on professional school educational opportunities available in the health professions.

Prerequisite(s): sophomore standing or above and permission of instructor.

BIO 215 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): BIO 115/115L and BIO 116/116L.

Corequisite(s): BIO 215L.

BIO 215L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 215.

BIO 221 Human Anatomy & Physiology I 4 Credits

A comprehensive survey of the structure and function of musculo-skeletal systems, neuroendocrine systems and related tissues and cellular interactions. Physiological applications include homeostasis, muscle dynamics, and cell activities. Laboratory exercises complement lecture material through the use of animal dissections, wet labs, computer-assisted investigations, microscopy, and models. Exams, case histories, personal investigations, and lab practicums assess learning. Course emphasis supports allied health and pre-professional training. Three hours of lecture and one three-hour lab per week. Designed for allied health students; does not satisfy requirements for the biology major. Prerequisite(s): BIO 115.

Corequisite(s): BIO 221L.

BIO 221L Human Anatomy & Physiology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 221.

BIO 222 Human Anatomy & Physiology II 4 Credits

A comprehensive survey of the organ systems of the body including special senses, cardiovascular, respiratory, digestive, excretory, reproduction and development. Physiological components include electrolytes, metabolism, nutrition, and the mechanisms of homeostasis and cell reception. Lab studies support lecture material through dissections, wet labs, computer-assisted learning, microscopy, and models. Assessment includes lab practicums, exams, and reports. Course emphasis supports allied health and pre-professional training. Designed for allied health students; does not satisfy requirements for the biology major. Prerequisite(s): BIO 221.

Corequisite(s): BIO 222L.

BIO 222L Human Anatomy & Phys II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Prerequisite(s): BIO 221L.

Corequisite(s): BIO 222.

BIO 260 Principles of Biology: Evolution, Diversity, and Biology of Cells 4 Credits

Lectures and labs focus on basic cell biology. Cell diversity and function, genetics and biotechnology are emphasized. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115 & BIO 116.

Corequisite(s): BIO 260L.

BIO 260L Principle of Biology: Cells Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 260.

BIO 265 Genetics 4 Credits

A comprehensive course focusing on molecular, Mendelian, and population genetics. Topics covered will include molecular advances in the study of genetics, including genomics and bioinformatics; evolution and the effects of genetic mutations; the application of population genetics to forensic science; genetic problem solving, including genetic crosses and statistical analysis; and regulation of gene expression. The laboratory for this course will introduce students to commonly used genetic model organisms and basic molecular biology techniques. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 265L.

BIO 265L Genetics Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 265.

BIO 272 Intro to Marine Biology 3 Credits

Introduces students to the study of marine environments, emphasizing the diversity, ecology, and physiology of marine animals, algae, and plants. Aspects of the human impact on marine environments are also discussed. Prerequisite(s): BIO 115 or BIO 116 or BNS 118 and grade of "C" or better.

Corequisite(s): BIO 272L.

BIO 272L Marine Biology Laboratory 1 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 272.

BIO 290 Special Topics in Biology 3 Credits**BIO 300 Developmental Biology 4 Credits**

Lectures and laboratories explore molecular, cellular, and genetic mechanisms of animal development. Aspects of gametogenesis, fertilization, induction, cytoplasmic determinants, morphogenetic movements, differentiation and developmental evolution are discussed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 300L.

BIO 300L Developmental Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 300.

BIO 305 Vertebrate Physiology 4 Credits

Study of the principles and mechanisms of mammalian physiology. Topics include the nervous system, muscle physiology, cardiovascular physiology, respiration, gastrointestinal activity, renal function, and endocrine physiology. Lectures and laboratory exercises emphasize homeostatic mechanisms and organ-system interactions. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 305L.

BIO 305L Vertebrate Physiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 305.

BIO 315 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116 or BNS 118, BIO 117.

Corequisite(s): BIO 315L.

BIO 315L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 315.

BIO 321 Microbiology 4 Credits

An introduction to the discipline of microbiology, with an emphasis on the biology of prokaryotes found in all the natural realms of our environment, including the oceans, soil, atmosphere, and extreme habitats. Emphasis will be placed on microbial diversity, fundamental microbial processes, and the continual interaction between microbes and the natural environment. Classical and modern methods of identification are introduced in the laboratory. Three hours of lecture and one three-hour lab per week. Some field trips are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 321L.

BIO 321L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 321.

BIO 335 Plant Biology 4 Credits

Biology of seed plants, including growth, development, and reproduction of flowering plants. Emphasis is placed on acclimation and adaptations demonstrating environmental influences on plant structure and function. Current literature involving molecular mechanisms of control will be discussed. Three hours of lecture and one three-hour lab per week. One Saturday field trip. Prerequisite(s): BIO 115, BIO 116, CHE 122.

Corequisite(s): BIO 335L.

BIO 335L Modern Plant Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 335.

BIO 340 Evolutionary Biology 4 Credits

Where did we come from? This course will explore the generation of biological diversity on earth. Course topics will include: the history of evolutionary thought; the different lines of evidence and fields of inquiry that bear on our understanding of evolution; selection vs. random changes in populations over time; speciation; extinction; the molecular basis of evolution; and evolutionary developmental biology. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265.

Corequisite(s): BIO 340L.

BIO 340L Evolutionary Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Corequisite(s): BIO 340.

BIO 350 General Ecology 4 Credits

An investigation of the processes that regulate the distribution of plants and animals throughout the biosphere. Relationships among species and their interactions with the environment are stressed. Quantitative analyses of experimental results and current research in basic and applied ecology are discussed. Laboratory activities explore conceptual models using both field activities and computer simulations. Three hours of lecture and one three-hour lab per week. One Saturday field trip (laboratory time will be adjusted accordingly). Prerequisite(s): Two of the following: ENV 100 with a grade of "B" or better; BIO 115, BIO 116, with a grade of "C" or better in each course.

Corequisite(s): BIO 350L.

BIO 350L General Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 350.

BIO 370 Immunology 4 Credits

An introduction to the cells and molecules of the immune system with emphasis on recent advances. Topics include AIDS, autoimmunity, transplantation, and cancer. Readings from current journals will be discussed and presented by students. The laboratory will introduce current research techniques and then apply these to a research problem with critical analyses of the data generated. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 370L.

BIO 370L Immunology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 370.

BIO 372 Behavior of Marine Organisms: Evolutionary Approach 4 Credits

An examination of the underlying mechanisms and evolutionary causes of behavior, including habitat use, feeding, and mate choice, particularly in marine organisms. The laboratory will involve collecting, analyzing and interpreting field data and performing experiments in the lab using a variety of marine organisms including fish and crabs. Three hours of lecture and one three-hour lab per week. Some full-day field trips (usually on a weekend) are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 372L.

BIO 372L Beh Mar Org: Evol Apprch Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 372.

BIO 400 Seminar in Cellular and Molecular Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in cell and molecular biology. Topics may include: genomics, regulation of gene expression, development, and molecular processes of disease. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116, BIO 260, junior standing, and permission of instructor.

BIO 416 Bioinformatics 3 Credits

A comprehensive overview of relevant computer-based technologies used in genome research, DNA sequence analysis, and evolutionary biology. Will focus extensively on Internet resources and predictive algorithm usage for determining evolutionary relationships of organisms based on molecular evidence. Lectures will focus on terms and concepts frequently used in genomic and bioinformatic research, while computer labs will allow students to perform hands-on projects with actual DNA sequence data.

Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265 (recommended); Junior standing or Permission of the Chairperson.

BIO 420 Seminar in Organismal Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in physiology and organismal biology. Topics may include hormonal control of behavior, immune pathogen interactions, and other aspects of whole animal and/or plant biology. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 450 Seminar in Ecology & Evolution 3 Credits

Critical analysis of the scientific literature pertaining to current topics in ecology and evolutionary biology. Ecology and evolution of terrestrial and aquatic systems may include scales of adaptation, mechanisms, or human impacts. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

BIO 491 Internship in Biology 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations. These can include educational or research institutions. The method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and should include keeping a journal of activities, a term paper or project report and a poster presentation. 2.5 GPA required.

Prerequisite(s): Permission of the instructor.

ENV 100 Introduction to Environmental Sciences 4 Credits

Examines how ecosystems function, with emphasis on the interactions between biological organisms and their physical environment, and the chemical processes that govern these interactions. The impact of human populations on natural ecosystems is investigated in detail using case studies from history and current events. The laboratory provides for hands-on experiences and/or short field trips to local sites for a better understanding of many of the concepts discussed. Weekday and weekend field trips may be required. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 100L.

ENV 100L Introduction to Environmental Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 100.

ENV 200 Statistical and Computer Applications in the Natural Sciences 4 Credits

This course introduces important statistical concepts, their application, and the usage of computer technology relevant to biological, environmental, geological, and marine problems. Students will learn various graphical and statistical techniques and how to execute them on personal computers. The curriculum emphasizes the integrated nature of these techniques and their importance to meaningful data evaluation and representation. Laboratory exercises are designed to emphasize useful solutions to problems found in many scientific disciplines using computer-based methodologies. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 200L.

ENV 200L Statistical and Computer Applications in the Natural Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 200.

ENV 205 Introduction to Geographic Information Systems (also cross listed as GLS-205) 3 Credits

This course introduces the computer-based concepts and skills of Geographic Information Systems (GIS). It covers the basic GIS concepts, such as map characteristics and projections, spatial data models and analysis, and relational databases. It explores data sources, data quality, and metadata, as well as implementation and management of specific GIS projects. Hands-on experience with ArcGIS software is provided through a series of student exercises completed throughout the semester. Students will also be taught how to process both vector and raster data using ArcGIS software. The course is relevant for students from numerous disciplines in the natural sciences, social sciences, and business, which require the analysis and graphical representation of spatial data. Three hours of lecture per week. Note: This course is cross-listed as GLS 205. Students may not receive credit for both ENV 205 and GLS 205.

ENV 220 Weather and Climate Change 3 Credits

This course introduces students to the concepts of weather and climate change. These concepts frame a continuum from short-term or daily changes in the atmosphere (meteorology) to those changes averaged over much longer periods of time (climatology). Students will learn the fundamentals of weather forecasting, the causes of natural variation in the Earth's climate, and the impact of human actions on the Earth's climate. Connections will be drawn to other current issues in the Earth system, including land use change, biodiversity, and pollution. Three hours of lecture per week.

Prerequisite(s): GEO 100 or permission of instructor.

ENV 290 Directed Research and Study in Environmental Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the environmental sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in weekly meetings with the instructor, and communicating the findings by writing a final project report.

ENV 340 Environmental Field Methods and Data Analysis 3 Credits

This course will provide students with practical experience in field methods and data analyses within the environmental sciences. The course will include advanced activities incorporating field-based exercises, GIS analyses, statistical analyses, and database management. Students will also complete an independent project focused on a relevant topic. Local field trips during lab and on weekends may be required.

Prerequisite(s): MTH 105, GEO 100, GEO 102, and ENV 100; or Permission of Instructor.

ENV 350 Principles of Environmental Toxicology 3 Credits

A comprehensive description of the important principles of toxicology, including the absorption, distribution, metabolism, and excretion of toxic substances. Target organs systems will be discussed as well as mechanisms of carcinogenesis and teratogenesis. Specific groups of toxins to be discussed include: pesticides, metals, radiation, solvents and vapors, and plant and animal toxins. Three hours of lecture per week.

Prerequisite(s): BCH 225 or CHE 211, BIO 115 or BIO 117.

ENV 375 Environmental Biogeochemistry 3 Credits

This course examines the biogeochemical interactions among various environmental components, including water, rock, soil, organisms, and atmosphere. Covered topics focus on the relation between the biosphere and changes in the Earth's environment and atmosphere. The transfer of energy and nutrients within terrestrial ecosystems also is explored. Case studies from various examples will be used to understand ecosystem dynamics. Long-term environmental change and present-day ecosystem restoration activities are examined in the context of biotic offsets and land-use planning. The biogeochemical cycles of some environmentally sensitive compounds and elements in natural systems, such pesticides, mercury, and lead, also may be examined. Three hours of lecture per week.

Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121, CHE 122, CHE 123.

ENV 480 Senior Thesis 3 Credits

A senior thesis is optional for environmental science majors. However, a senior thesis is required for eligibility to graduate with honors in environmental science. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

ENV 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

ENV 491 Internship in Environmental Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

GEO 100 Earth Systems Science 3 Credits

Investigates the major global processes that occur on Earth. These processes can be grouped into four major systems: atmosphere, hydrosphere, lithosphere, and cosmosphere. Each system interacts with and affects the other systems creating, in a sense, a single Earth process. With this approach, the student will view the Earth as a whole, and understand that the many seemingly separate components that make up this planet are, in fact, a set of interacting processes, that operate in cycles through time, within a single global system. Three hours of lecture per week.

GEO 102 Earth Materials and Processes Lab 1 Credits

A hands-on laboratory experience involving the origin, significance, identification, and classification of Earth materials and processes. Mineral and rock specimens, soil and water samples, and topographic and geologic maps are utilized. Numerous field trips to local sites help students visualize many of the concepts discussed. One three-hour lab per week.

Prerequisite(s): concurrent enrollment in, or prior completion of, GEO 100 or GEO 113 is required.

GEO 113 Environmental Geology (also cross listed as GLS-113) 3 Credits

Examines the fundamental premise that "our society exists by geologic consent subject to change without notice" by studying a number of important geologic processes and cycles, and the hazards and/or resources they present to individuals, society, and the natural environment. Topics discussed include earthquakes, volcanism, stream flooding, coastal erosion, climate change, and water, soil, mineral, and energy resources. Cost/benefit considerations, hazard mitigation concepts, economic and political ramifications, and the interactions among the lithosphere, hydrosphere, atmosphere, and biosphere also are presented. The course is designed to give non-science majors a deeper appreciation of their connection to the surrounding geologic environment, leading to better, more informed business, political, policy, and personal decisions. Three hours of lecture per week. Note: This course is cross-listed as GLS 113. Students may not get credit for both GEO 113 and GLS 113.

GEO 168 Mesozoic Ruling Reptiles 3 Credits

A survey of the vertebrate groups that dominated the land (Dinosaurs), the seas (Mosasaurs, Plesiosaurs, Pliosaurus, Tylosaurus, and Ichthyosaurs) and the skies (Pterosaurs, Pterodactyls) during the Mesozoic Era. The course considers diversity of skeletal architectures and their reconstructed function and the often controversial, inferred anatomy, physiology, reproductive strategy, habit, and social behaviors of these animals that are different from mainstream reptiles, birds, and mammals. It also covers the paleogeographical, and paleoclimatological conditions that facilitated the evolutionary rise to dominance and diversification of these vertebrate groups and the debated causes of their eventual extinction. Three hours of lecture per week. Weekend field trips may be required.

GEO 201 Elements of Mineralogy 4 Credits

The physical properties, chemistry, atomic structure, crystallography, uses, and environmental impacts of important minerals of the lithosphere and biosphere are presented. In addition, lab assignments and exercises emphasize crystal symmetry and chemistry; polarizing microscope, ICP, and x-ray analytical techniques; the graphical display and interpretation of compositional data; optical properties of isotropic and uniaxial minerals; and the identification of mineral hand specimens. Three hours of lecture and one three-hour lab per week. At least one weekend field trip required. **Prerequisite(s):** GEO 100 or GEO 113, CHE 120, CHE 121 taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 201L.

GEO 201L Elements of Mineralogy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 201.

GEO 290 Directed Research and Study in Geosciences 1-4 Credits

Directed Research and Study in Geosciences will provide an opportunity for freshman and sophomore students to gain hands-on research experience in the geosciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

GEO 305 Petrology and Petrography 4 Credits

The origin, evolution, and terrestrial distribution of igneous and metamorphic rocks are presented and detailed. Classroom lectures and discussions emphasize rock geochemistry, mineralogic variability, the constraints placed on petrogenetic models by physio-chemical studies of natural and synthetic systems, and the relation of the various rock types to current plate tectonic theory and other whole-earth processes. The laboratory emphasizes the continuing development of optical microscopy skills, the identification of rock texture and mineralogy in thin section and hand specimen, the optical determination of mineral composition, and the recognition of possible petrogenetic processes as recorded in the rocks themselves. Three hours of lecture and one three-hour lab per week. Two weekend field trips required. Prerequisite(s): GEO 201, and CHE 122 and CHE 123 or taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 305L.

GEO 305L Petrology and Petrography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 305.

GEO 306 Sedimentology and Stratigraphy 4 Credits

The principles of weathering, erosion, transportation, and deposition of sediment are the focus of this course. Sediment characteristics are examined to identify the processes involved in transporting grains and the specific environment in which the grains were deposited. Students will learn how to collect, analyze, and interpret sedimentary data and how to interpret surface and subsurface stratigraphic data using various techniques, such as lithostratigraphic, biostratigraphic, and geophysical, correlations. Field trips will expose students to different sedimentary environments and provide opportunities for students to learn how to conduct fieldwork. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): GEO 100.

Corequisite(s): GEO 306L.

GEO 306L Sedimentology and Stratigraphy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 306.

GEO 310 Structural Geology 4 Credits

The origin, distinguishing characteristics, and geographic distribution of deformational structures of the Earth's crust. In the laboratory, GPS, GIS, geologic maps, and three-dimensional problems are used in the study of typical surface and subsurface geologic problems. Three hours of lecture and one three-hour lab per week. Weekday and/or weekend field trips may be required. Prerequisite(s): GEO 100 or GEO 113, GEO 102.

Corequisite(s): GEO 310L.

GEO 310L Structural Geology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 310.

GEO 350 Soil and Surficial Processes 4 Credits

This course examines the physical, chemical, hydrological, and biological aspects of soil and their relation to geomorphologic development. Specific topics include descriptions of soil texture and structures, soil classification, soil colloids, soil redox and pH, and their effect on vadose zone water chemistry. Soil genesis and erosion controls, microbiology/ecology, nutrient cycles, and modern soil pollution from sludge and pesticide applications, as well as domestic and industrial chemical spills, also are discussed. The lab portion of the course introduces the basic techniques of soil analysis, both physical and chemical, and field survey methods. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, and GEO 102.

Corequisite(s): GEO 350L.

GEO 350L Soil and Surficial Processes Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 350.

GEO 407 Hydrology and Water Resources 4 Credits

This course introduces the principles that govern both surface water and groundwater flows that have applications to societal water needs. Surface water topics cover the basics of the hydrologic cycle, the processes of precipitation, evapotranspiration, runoff, and infiltration, and various factors affecting water supply and water quality issues in a modern watershed. Groundwater topics examine the principles that govern flow through a porous medium and the basics of well hydraulics under different pumping conditions that community development requires. Laboratory exercises will give students hands-on experience with the delineation of watersheds, analysis of precipitation data, and flow contaminant transport modeling. The field portion of the laboratory includes runoff and stream discharge measurements, as well as hydraulic conductivity estimations from both slug and pumping tests. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, GEO 102, and MTH 105.

Corequisite(s): GEO 407L.

GEO 407L Hydrology and Water Resources Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 407.

GEO 480 Senior Thesis 3 Credits

A senior thesis is optional for geosciences majors. However, a senior thesis is required for eligibility to graduate with honors in geosciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

GEO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

GEO 491 Internship in Geosciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 120 Oceanography 3 Credits

Investigates the interrelationships among the geological, chemical, physical, and biological aspects of oceanography. Topics include origin and evolution of ocean basins; physical characteristics of modern oceans; seawater chemistry; ocean and atmosphere interactions; ocean currents; waves and tides; coastal processes; biological productivity; and diversity, distribution and adaptations of marine organisms. Throughout the course, emphasis is placed on the processes that connect the seemingly separate topics to each other and to human life. Weekend field trips may be required. Three hours of lecture per week. Note: This course is cross-listed as GLS 120. Students may not get credit for both MAR 120 and GLS 120.

MAR 121 Introductory Oceanography Lab 1 Credits

Introduction to the fundamental aspects of geological, chemical, physical, and biological oceanography. Students learn through inquiry-based, hands-on exercises and activities using actual data collected in the lab and in the field. Independent projects and local field trips during lab and on weekends may be required. One three-hour lab per week.

Corequisite(s): MAR 120 or GLS 120 or as prerequisite(s).

MAR 210 Marine Life Through Time 4 Credits

Survey of the important developments in marine life over the last three billion years from the Pre-Cambrian evolution of one-celled organisms, through the Cambrian explosion of complex marine invertebrate life and subsequent diversification of backboned organisms in the Ordovician time, to the colonization of marginal marine and freshwater habitats in the Silurian-Devonian geological periods, and ultimately to extinctions during global crises of the late Devonian, Permian, Triassic, Cretaceous, and Pleistocene time intervals. The emphasis is on evolutionary adaptive breakthroughs within each phylum, particularly the significant morphological and anatomical innovations, and the subsequent radiation of these higher taxa into new habitats and niches through geologic time. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): GEO 100 or GEO 113, GEO 102 or BIO 115 or permission of instructor.

MAR 210L Marine Life Through Time Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 210.

MAR 227 Introduction to Field Marine Science: Subtropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in subtropical environments, emphasizing shallow subtidal and intertidal environments such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include the diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a subtropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 228 Introduction to Field Marine Science: Boreal Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in boreal environments, emphasizing the rocky shallow subtidal and intertidal environments. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; day-night fluctuations in tide pool chemistry; plankton dynamics; predator-prey relationships; the physical processes and chemical properties of water; and comparisons of wave-exposed and wave-protected sides of a shoreline. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a boreal environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 229 Introduction to Field Marine Science: Tropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in tropical environments, emphasizing the shallow subtidal and intertidal environments, such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a tropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 290 Directed Research and Study in Marine Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the marine sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

MAR 325 Marine Vertebrates 4 Credits

A survey of the biology of marine vertebrate animals, including fish (jawless fish, sharks, rays, and bony fish), reptiles (sea turtles and sea snakes), sea birds, and mammals (manatees, seals, and whales). The evolution, physiology, natural history, ecological relationships, and human interactions of these groups are emphasized. Three hours of lecture and one three-hour lab per week. Field trips may be required. Prerequisite(s): BIO 272 and BIO 272L.

Corequisite(s): MAR 325L.

MAR 325L Marine Vertebrates Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 325.

MAR 330 Chemical Oceanography 4 Credits

Introduction to the chemical aspects of the oceans and their influence on marine ecosystems and Earth processes. Emphasis is placed on chemical and physical properties of seawater, atmosphere-ocean interactions, biogeochemical cycles with marine components, production and destruction of marine organic matter, chemical ecology, and marine pollution. During the lab portion of this course, students gain hands-on experience in analyzing ocean water samples, experimental design, and interpreting marine chemical data. Three hours of lecture and one three-hour lab per week. Weekend field trips and independent projects may be required. Prerequisite(s): CHE 120, CHE 121, MAR 120, and MAR 121; or permission of instructor.

Corequisite(s): MAR 330L.

MAR 330L Chemical Oceanography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 330.

MAR 340 Marine Processes and Environments: Seminar 3 Credits

This course is designed as a seminar course. Therefore, students will learn to lead class discussions, to analyze and critique peer-reviewed journal articles, and to enhance their presentation skills. Students will interpret graphical, spatial, and numerical data to support their positions. Content will emphasize the interactions among marine processes, biological features, and geologic landforms.

Prerequisite(s): MAR 120 or GEO 100; GEO 306.

MAR 360 Plankton Ecology 4 Credits

Examines the diversity, physiology, and ecology of marine phytoplankton and zooplankton. Students will survey the dominant plankton groups, their distribution, nutritional requirements, growth kinetics, and behavior. Planktonic predator/prey interactions and food web dynamics will be discussed. Students will also examine the interdisciplinary nature and role of plankton in biogeochemical cycles. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): MAR 120 and MAR 121; or BIO 116.

Corequisite(s): MAR 360L.

MAR 360L Plankton Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 360.

MAR 380 The Learning and Teaching of Marine Science 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

MAR 401 Marine Ecology 4 Credits

The purpose of this course is to introduce students to fundamental principles in ecology, as it relates to marine systems. Topics include the marine environment and its influence on the organisms living there; biodiversity and speciation; factors regulating population dynamics in marine systems; larval and fisheries ecology; species interactions such as predation, competition, and symbiosis; factors regulating productivity and energy flow in marine systems; and marine conservation. Hands-on laboratory exercises will provide students with the opportunity to design and conduct experiments related to marine ecology, and to collect, analyze, and interpret data from those experiments. Ecosystem modeling will also be introduced. Three hours of lecture and one three-hour lab per week. Weekend field trips may be introduced. Prerequisite(s): BIO 272, BIO 272L.

Corequisite(s): MAR 401L.

MAR 401L Marine Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 401.

MAR 410 Physical Oceanography 3 Credits

Introduction to the physical aspects and processes of the oceans and their influence on marine ecosystems and Earth processes. Topics include distribution of salinity and water temperature and their effect on water movement, the oceanic heat budget, atmospheric and oceanic interactions, ocean currents including surface and deep water circulation, waves, tides, and medium- to small-scale circulation features. Throughout the course, emphasis is placed on how these physical processes affect the biology and chemistry of the ocean. Three hours of lecture per week. Weekend field trips may be required.

Prerequisite(s): MAR 120.

MAR 480 Senior Thesis 3 Credits

A senior thesis is optional for marine sciences majors. However, a senior thesis is required for eligibility to graduate with honors in marine sciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the marine sciences major and permission of department chair.

MAR 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

MAR 491 Internship in Marine Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 580 Ind Marine Sci Field Study 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

Liberal Studies: Marine Ecological Emphasis

Program Overview

The Liberal Studies: Marine Ecological Emphasis major is designed specifically as a second major for students in the School of Education (p. 461) interested in teaching science in elementary schools. The program is tailored to meet the interdisciplinary science objectives of elementary education majors and to facilitate the timely completion of their dual requirements in the School of Education and the School of Liberal Arts and Sciences. This major is not designed to prepare students for further study in science disciplines at the graduate or professional level, or to teach science at the middle school or high school

level. Students who may wish to teach science at the high school level should discuss the additional certification requirements needed with their School of Education academic advisor.

Curriculum Overview

The curriculum for this major focuses on the interdisciplinary nature of the marine sciences by offering classes that give students a strong basis of science preparatory material while also offering a unique, interdisciplinary, hands on approach to learning. Students take introductory courses in foundational classes in chemistry, physics, biology, geosciences and the marine sciences, followed by more in-depth course work focused on marine science.

Honors Program in Liberal Studies: Marine Ecological Emphasis

Graduation with honors in Liberal Studies: Marine Ecological Emphasis is awarded in recognition of majors who have demonstrated outstanding academic ability. Enrollment in the program is by invitation of the faculty of the Department of Geological, Environmental, and Marine Sciences (GEMS). Eligibility requirements include a minimum GPA of 3.5 in courses required for the major and the satisfactory completion of a three- or four-credit independent research and study course. In addition, an honors candidate must maintain an overall minimum GPA of 3.0.

Degree Offered

- B.A. in Liberal Studies: Marine Ecological Emphasis

Liberal Studies: Marine Ecological Major Requirements

(47-48 credits)

Core Requirements

See LAS Core Page (p. 454)

Geological, Environmental, and Marine Sciences

ENV 200	Statistical and Computer Applications in the Natural Sciences	4
GEO 100	Earth Systems Science	3
GEO 102	Earth Materials and Processes Lab	1
MAR 120	Oceanography	3
MAR 121	Introductory Oceanography Lab	1
MAR 210	Marine Life Through Time	4
MAR 380	The Learning and Teaching of Marine Science	4
MAR 401	Marine Ecology	4

Biology

BIO 115	Principles of Biology I	4
or BIO 116	Principles of Biology II	
BIO 272	Intro to Marine Biology	3
BIO 272L	Marine Biology Laboratory	1

Chemistry

CHE 120	Principles of Chemistry	3
CHE 121	Principles of Chemistry Lab	1

Physics

PHY 100	Principles of Physics I	3
PHY 100L	Principles of Physics I Lab	1

Electives

Select two of the following: 7-8

BIO 372	Behavior of Marine Organisms: Evolutionary Approach
GEO 306	Sedimentology and Stratigraphy
MAR 227	Introduction to Field Marine Science: Subtropical Environments
or MAR 228	Introduction to Field Marine Science: Boreal Environments
or MAR 229	Introduction to Field Marine Science: Tropical Environments
MAR 325	Marine Vertebrates
MAR 330	Chemical Oceanography
MAR 360	Plankton Ecology
MAR 410	Physical Oceanography

Total Credits 89-91

Majors will also take MTH 105 or MTH 210 to fulfill their math core requirement.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Course	Title	Semester Credit Hours

¹ For course placement information see <http://www.rider.edu/offices-services/orientation/course-placement>

² Please note that elective credits may be used to complete requirements in a second major or minor.

³ List of Major Electives (two required) include BIO 372, GEO 306, MAR 227, MAR 325, MAR 330, MAR 360, and MAR 410.

Courses and Descriptions

BIO 100 Life Science:Human Emphasis 3 Credits

An examination of mammalian physiology and development at the cellular and organ system level, with emphasis on physiological homeostasis in man. Three hours of lecture per week.

BIO 101 Life Science:Genetics Emphasis 3 Credits

An examination of cell biology and genetics, with emphasis on the impact of these fields on human affairs. Three hours of lecture per week.

BIO 103 Life Sci:Ecobotanical Emphasis 3 Credits

Plant biology with emphasis on ecological interactions and economic uses. Three hours of lecture per week.

BIO 105 Life Science and Society 3 Credits

This course will highlight current scientific knowledge and the state of ongoing inquiry in often-misunderstood topics related to health and medicine. Topics will include, but are not limited to, stem cells, embryo editing, vaccination, genetic modification of food and animals, and the process of drug development. Throughout this course, students will learn basic cell biology and genetics as a foundation for scientific understanding in itself as well as how to detect misconceptions and myths related to science, healthcare, and medicine.

BIO 106 Life Science:Human Disease 3 Credits

An introduction to molecular, cellular, and human biology with emphasis upon diseases and disorders caused by mutation, bacteria, viruses, or parasites. The biology of human aging is also discussed. Three hours of lecture per week.

BIO 108 Life Sci: Biol of Human Aging 3 Credits

An introduction to the biology of aging manifest in the cells, tissues, and organs of animals and humans. Three hours of lecture per week.

BIO 109 From the Big Bang to Origins of Life 3 Credits

This course is a non-major science core course focusing on the interactions among astronomy/physics, chemistry, geology and biology. A consensus story has emerged about our origins from scientific insights obtained over the last 400 years. Many know this story that began with the Big Bang and proceeded through the origin of the galaxies and the origin of the elements to the origin of our sun, earth and solar system. The origin of the earth gave rise to the origin of life, evolution of bacteria, viruses, plants and animals, creation of ecosystems and ultimately the evolution of humans. We will proceed through the science slowly. By doing so we can take the information from all of the sciences and reflect upon it. The result of will be an enhanced appreciation for both the process of science and the awesome information we have learned about the natural world as well as ourselves. The study of our origins reveals that humans, all life, and our planet are intimately related.

BIO 110 Life Science: Inquiry Approach 4 Credits

An introductory course for non-science majors in which students develop an understanding of biological evolution, the molecular basis of heredity, the cell, matter, energy and organization in living systems, and the interdependence of organisms. In addition, students will develop an understanding of science as a human endeavor, the nature of scientific knowledge, and historical perspectives. Through investigative activities, students will develop an understanding about scientific inquiry and develop abilities necessary to do scientific inquiry. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 110L.

BIO 110L Life Sci: Inquiry Approach Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 110.

BIO 115 Principles of Biology I 4 Credits

An introductory biology course focusing on major themes of biology: what is life?; Cells as fundamental structure and functional unit of life; information transmission, storage and retrieval; Diversity and unity of life explained by evolution. Three hours of lecture and one three- hour lab per week.

Corequisite(s): BIO 115L.

BIO 115L Principles of Biology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 115.

BIO 116 Principles of Biology II 4 Credits

An introductory biology course focusing on major themes of biology: Energy and matter to carry out life's essential functions; Interdependent relationships characterize biological systems (homeostasis, growth & development); Behavior of living things; Ecology and the environment. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 116L.

BIO 116L Principles of Biology II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 116.

BIO 206 The Pharmaceutical Industry 3 Credits

An introduction to drug discovery and development. Topics include how drugs are used to diagnose, cure, treat, and prevent disease and how drugs affect body function. The origins of diseases and the early attempts at treatment are also covered. Designed for business majors; does not satisfy requirements for the biology major.

Prerequisite(s): BIO 100 or BIO 101 or BIO 106 or BIO 108 or BNS 107 or CHE 115.

BIO 210 Hospital Intern Program 2 Credits

An internship that provides students with the experience in the practical aspects of medicine. Major departments in the hospital such as the emergency room, operating room, clinic, radiology, and the laboratory will be open for student rotations. Field trips to various medical schools in the area will provide information on professional school educational opportunities available in the health professions.

Prerequisite(s): sophomore standing or above and permission of instructor.

BIO 215 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): BIO 115/115L and BIO 116/116L.

Corequisite(s): BIO 215L.

BIO 215L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 215.

BIO 221 Human Anatomy & Physiology I 4 Credits

A comprehensive survey of the structure and function of musculo-skeletal systems, neuroendocrine systems and related tissues and cellular interactions. Physiological applications include homeostasis, muscle dynamics, and cell activities. Laboratory exercises complement lecture material through the use of animal dissections, wet labs, computer-assisted investigations, microscopy, and models. Exams, case histories, personal investigations, and lab practicums assess learning. Course emphasis supports allied health and pre-professional training. Three hours of lecture and one three-hour lab per week. Designed for allied health students; does not satisfy requirements for the biology major. **Prerequisite(s):** BIO 115.

Corequisite(s): BIO 221L.

BIO 221L Human Anatomy & Physiology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 221.

BIO 222 Human Anatomy & Physiology II 4 Credits

A comprehensive survey of the organ systems of the body including special senses, cardiovascular, respiratory, digestive, excretory, reproduction and development. Physiological components include electrolytes, metabolism, nutrition, and the mechanisms of homeostasis and cell reception. Lab studies support lecture material through dissections, wet labs, computer-assisted learning, microscopy, and models. Assessment includes lab practicums, exams, and reports. Course emphasis supports allied health and pre-professional training. Designed for allied health students; does not satisfy requirements for the biology major. Prerequisite(s): BIO 221.

Corequisite(s): BIO 222L.

BIO 222L Human Anatomy & Phys II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Prerequisite(s): BIO 221L.

Corequisite(s): BIO 222.

BIO 260 Principles of Biology: Evolution, Diversity, and Biology of Cells 4 Credits

Lectures and labs focus on basic cell biology. Cell diversity and function, genetics and biotechnology are emphasized. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115 & BIO 116.

Corequisite(s): BIO 260L.

BIO 260L Principle of Biology: Cells Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 260.

BIO 265 Genetics 4 Credits

A comprehensive course focusing on molecular, Mendelian, and population genetics. Topics covered will include molecular advances in the study of genetics, including genomics and bioinformatics; evolution and the effects of genetic mutations; the application of population genetics to forensic science; genetic problem solving, including genetic crosses and statistical analysis; and regulation of gene expression. The laboratory for this course will introduce students to commonly used genetic model organisms and basic molecular biology techniques. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 265L.

BIO 265L Genetics Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 265.

BIO 272 Intro to Marine Biology 3 Credits

Introduces students to the study of marine environments, emphasizing the diversity, ecology, and physiology of marine animals, algae, and plants. Aspects of the human impact on marine environments are also discussed. Prerequisite(s): BIO 115 or BIO 116 or BNS 118 and grade of "C" or better.

Corequisite(s): BIO 272L.

BIO 272L Marine Biology Laboratory 1 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 272.

BIO 290 Special Topics in Biology 3 Credits**BIO 300 Developmental Biology 4 Credits**

Lectures and laboratories explore molecular, cellular, and genetic mechanisms of animal development. Aspects of gametogenesis, fertilization, induction, cytoplasmic determinants, morphogenetic movements, differentiation and developmental evolution are discussed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 300L.

BIO 300L Developmental Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 300.

BIO 305 Vertebrate Physiology 4 Credits

Study of the principles and mechanisms of mammalian physiology. Topics include the nervous system, muscle physiology, cardiovascular physiology, respiration, gastrointestinal activity, renal function, and endocrine physiology. Lectures and laboratory exercises emphasize homeostatic mechanisms and organ-system interactions. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 305L.

BIO 305L Vertebrate Physiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 305.

BIO 315 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116 or BNS 118, BIO 117.

Corequisite(s): BIO 315L.

BIO 315L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 315.

BIO 321 Microbiology 4 Credits

An introduction to the discipline of microbiology, with an emphasis on the biology of prokaryotes found in all the natural realms of our environment, including the oceans, soil, atmosphere, and extreme habitats. Emphasis will be placed on microbial diversity, fundamental microbial processes, and the continual interaction between microbes and the natural environment. Classical and modern methods of identification are introduced in the laboratory. Three hours of lecture and one three-hour lab per week. Some field trips are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 321L.

BIO 321L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 321.

BIO 335 Plant Biology 4 Credits

Biology of seed plants, including growth, development, and reproduction of flowering plants. Emphasis is placed on acclimation and adaptations demonstrating environmental influences on plant structure and function. Current literature involving molecular mechanisms of control will be discussed. Three hours of lecture and one three-hour lab per week. One Saturday field trip. Prerequisite(s): BIO 115, BIO 116, CHE 122.

Corequisite(s): BIO 335L.

BIO 335L Modern Plant Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 335.

BIO 340 Evolutionary Biology 4 Credits

Where did we come from? This course will explore the generation of biological diversity on earth. Course topics will include: the history of evolutionary thought; the different lines of evidence and fields of inquiry that bear on our understanding of evolution; selection vs. random changes in populations over time; speciation; extinction; the molecular basis of evolution; and evolutionary developmental biology. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265.

Corequisite(s): BIO 340L.

BIO 340L Evolutionary Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Corequisite(s): BIO 340.

BIO 350 General Ecology 4 Credits

An investigation of the processes that regulate the distribution of plants and animals throughout the biosphere. Relationships among species and their interactions with the environment are stressed. Quantitative analyses of experimental results and current research in basic and applied ecology are discussed. Laboratory activities explore conceptual models using both field activities and computer simulations. Three hours of lecture and one three-hour lab per week. One Saturday field trip (laboratory time will be adjusted accordingly). Prerequisite(s): Two of the following: ENV 100 with a grade of "B" or better; BIO 115, BIO 116, with a grade of "C" or better in each course.

Corequisite(s): BIO 350L.

BIO 350L General Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 350.

BIO 370 Immunology 4 Credits

An introduction to the cells and molecules of the immune system with emphasis on recent advances. Topics include AIDS, autoimmunity, transplantation, and cancer. Readings from current journals will be discussed and presented by students. The laboratory will introduce current research techniques and then apply these to a research problem with critical analyses of the data generated. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 370L.

BIO 370L Immunology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 370.

BIO 372 Behavior of Marine Organisms: Evolutionary Approach 4 Credits

An examination of the underlying mechanisms and evolutionary causes of behavior, including habitat use, feeding, and mate choice, particularly in marine organisms. The laboratory will involve collecting, analyzing and interpreting field data and performing experiments in the lab using a variety of marine organisms including fish and crabs. Three hours of lecture and one three-hour lab per week. Some full-day field trips (usually on a weekend) are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 372L.

BIO 372L Beh Mar Org: Evol Approach Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 372.

BIO 400 Seminar in Cellular and Molecular Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in cell and molecular biology. Topics may include: genomics, regulation of gene expression, development, and molecular processes of disease. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116, BIO 260, junior standing, and permission of instructor.

BIO 416 Bioinformatics 3 Credits

A comprehensive overview of relevant computer-based technologies used in genome research, DNA sequence analysis, and evolutionary biology. Will focus extensively on Internet resources and predictive algorithm usage for determining evolutionary relationships of organisms based on molecular evidence. Lectures will focus on terms and concepts frequently used in genomic and bioinformatic research, while computer labs will allow students to perform hands-on projects with actual DNA sequence data.

Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265 (recommended); Junior standing or Permission of the Chairperson.

BIO 420 Seminar in Organismal Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in physiology and organismal biology. Topics may include hormonal control of behavior, immune pathogen interactions, and other aspects of whole animal and/or plant biology. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 450 Seminar in Ecology & Evolution 3 Credits

Critical analysis of the scientific literature pertaining to current topics in ecology and evolutionary biology. Ecology and evolution of terrestrial and aquatic systems may include scales of adaptation, mechanisms, or human impacts. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

BIO 491 Internship in Biology 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations. These can include educational or research institutions. The method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and should include keeping a journal of activities, a term paper or project report and a poster presentation. 2.5 GPA required.

Prerequisite(s): Permission of the instructor.

CHE 100 Intro to College Chemistry 3 Credits

Open to all students, but designed primarily for those who wish to major in a science which requires chemistry but whose chemistry background is not sufficient to allow entrance into Chemistry 120. It focuses on the nomenclature used in chemistry including the symbols used to designate the chemical elements, the construction of chemical formulas, and the writing and balancing of chemical equations. Other topics will include interpreting the Periodic Table, the valences of the elements, the mole concept, and simple stoichiometry. In addition, chemical calculations involving units, scientific notation, significant figures, and the algebraic manipulations of simple equations will be included. Three hours of lecture per week. This course does not satisfy the requirements for the biochemistry or chemistry degree, but does satisfy the core requirements for liberal arts, education and business majors.

CHE 115 Chem and Contemporary Society 3 Credits

Designed to give the nonscientist an appreciation of the role of chemistry in today's world. The approach is conceptual rather than mathematical. Topics include basic principles of chemical theory, energy sources, elementary organic chemistry, drugs, food additives, polymers, chemistry of living systems, inorganic solids in modern technology, and problems involving pollution of the environment. Three hours of lecture per week. This course satisfies the core requirements for liberal arts, education and business majors.

CHE 118 Exploration of Chemical Prin 4 Credits

A one-semester introduction to the principles of chemical sciences. Students will utilize inquiry-based learning methods to examine contextual problems as a means to explore introductory models and concepts of chemistry. Students will also gain an understanding of how scientific models are used to explain experimental observations. The laboratory component of this course is designed to provide students with an experimental context within which to develop some of the models described in the classroom. Three hours of lecture and one three-hour lab per week.

CHE 118L Explor Chemical Prin Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 118.

CHE 120 Principles of Chemistry 3 Credits

For students who have successfully completed one year of high school chemistry. This systematic study of the fundamental principles and concepts of chemistry covers atomic structure, bonding, stoichiometric relationships, including solution and oxidation-reduction reactions, and molecular structure. Three hours of lecture per week. **Prerequisite(s):** High school chemistry or CHE 100 is recommended before taking this course.

Corequisite(s): CHE 121.

CHE 121 Principles of Chemistry Lab 1 Credits

For students concurrently taking CHE 120. Experiments involve gravimetric, volumetric, and spectrophotometric quantitative analysis. One three-hour lab per week. Fall.

CHE 122 Intro to Chemical Systems 3 Credits

A continuation of CHE 120. For students majoring in the sciences but may be taken by others. Chemical systems in which the study of kinetics, thermodynamics, equilibrium, and radiochemistry are emphasized. Three hours of lecture per week. **Prerequisite(s):** CHE 120, MTH 105 or higher.

Corequisite(s): CHE 123.

CHE 123 Quantitative Methods Lab 1 Credits

Usually taken concurrently with CHE 122. Primarily for students majoring in the sciences. A number of quantitative classical and instrumental methods of analysis are used to determine thermodynamic properties and reaction mechanisms. One three-hour lab per week. **Prerequisite(s):** CHE 121.

Corequisite(s): CHE 122.

CHE 211 Organic Chemistry I 4 Credits

The structure, chemical properties, and methods of preparation of the more important classes of carbon compounds are studied, with an emphasis on the relationship of structure, stereochemistry, and conformation to chemical reactivity. The preparation and reactivity of organic functional groups is introduced. The use of infrared and nuclear magnetic resonance spectroscopy, and mass spectrometry for elucidating structures of organic molecules is discussed. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** CHE 122, CHE 123.

Corequisite(s): CHE 211L.

CHE 211L Organic Chem I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 211.

CHE 214 Organic Chemistry II 4 Credits

A continuation of Chemistry 211, emphasizing the mechanism of organic reactions, structural interpretations of properties, preparations, reactivity and identification of organic compounds. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** CHE 211.

Corequisite(s): CHE 214L.

CHE 214L Organic Chemistry II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 214.

CHE 250 Quantitative Analysis and Statistics Methods 4 Credits

This course will provide a deeper exploration of topics in chemistry that are steeped in numerical analysis. These topics include advanced analysis of equilibrium systems, acid-base systems and electrochemical systems. Additional detail will be given to methods of chemical measurement, statistical methods of data analysis and determination of data validity and reliability. Both lecture and laboratory will show an emphasis on using computer-based tools to analyze experimental data. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** CHE 122, CHE 123, MTH 210.

Corequisite(s): CHE 250L.

CHE 250L Quantitative Analysis and Statistical Methods Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 250.

CHE 305 Physical Chemistry I 3 Credits

The mathematic and conceptual foundations of physical chemistry will be introduced with an over-arching theme of determination of energy allocation within atomic and molecular systems. Topics will include determination and measurement of energy states in atoms and molecules, simple quantum mechanical systems, distribution of energies and the connection to thermodynamic quantities, the three laws of thermodynamics, spontaneity, equilibrium and experimental kinetics.

Prerequisite(s): CHE 214, MTH 211, PHY 201.

CHE 306 Physical Chemistry II 3 Credits

Physical chemistry concepts are explored in more detail with emphasis on examination of systems that require multiple models in physical chemistry to explain. Topics will include, kinetic theory and transition state theory, statistical mechanics and its connections to thermodynamic functions, temperature dependence of spontaneity and equilibrium, the thermodynamics of condensed phases and multi-component equilibria, electrochemistry, multi-electron quantum mechanical systems, approximations in quantum mechanics, symmetry and advanced molecular spectroscopy.

Prerequisite(s): CHE 305, MTH 212.

CHE 315 Inorganic Chemistry 3 Credits

The periodic table as a tool for predicting the physical and chemical properties of chemical systems is developed and examined in conjunction with various theories of bonding, including valence bond, molecular orbital, valence shell electron repulsion, and ligand field theory. Emphasizes structure of crystalline solids, coordination compounds, reaction mechanisms, and structure-property relationships. Three hours of lecture per week.

Prerequisite(s): CHE 214.

CHE 316 Inorganic Chemistry Laboratory 1 Credits

Students will explore a variety of synthetic methodologies for the growth of inorganic molecular systems, and solid-state materials. A transition metal or main group metal plays a central structural role in all systems that will be examined. Modern analytical methods will be applied to characterize synthesis products, such as FT-IR spectroscopy, polarimetry, NMR, and powder X-ray diffraction analysis.

Prerequisite(s): CHE 315 or as corequisite.

CHE 320 Polymer Chemistry 3 Credits

Designed to acquaint students with the structure and properties of polymers, the contrast between small molecules and polymers, methods of measuring molecular weight, the mechanism of polymerization, and the methods of fabricating polymers.

Prerequisite(s): CHE 214, CHE 305 or CHE 306.

CHE 325 Physical Chemistry Laboratory 1 Credits

Measurements are made of physical properties of molecules and chemical dynamical processes. These measurements will be used to develop models which explain the physical chemical nature of the systems under examination. Experiments will utilize various instrumental techniques such as infrared spectrometry, nuclear magnetic resonance, fluorescence and UV/Vis spectrometry. One three-hour lab per week.

Prerequisite(s): CHE 250, CHE 305.

CHE 330 Instrumental Analysis Laboratory 2 Credits

This course is designed to give students practical experience using modern analytical instrumentation and to provide students with the background theory and principles of operation. The instrumental methods introduced in this course include: ultraviolet and visible spectroscopy, atomic emission spectroscopy, gas chromatography (GC), high performance liquid chromatography (HPLC), X-ray powder diffraction analysis and electrochemical analysis. This experimental laboratory course meets two times per week with three hours for each session. One session will be focused on instrumentation background theory and discussion and the other session will be experimental practice.

Prerequisite(s): CHE 214, CHE 250, PHY 201.

CHE 350 Advanced Organic Synthesis 2 Credits

The first of four experimental chemistry labs designed for chemistry majors. It presents the use of modern techniques, and instrumentation in organic chemistry, including distillation, chromatography, infrared, ultraviolet, nuclear magnetic spectroscopy, and mass spectrometry. Two three-hour labs per week.

Prerequisite(s): CHE 214.

CHE 375 Computational Chemistry Lab 2 Credits

This course will provide students with a means to explore various methods in computational chemistry. Basic computational methods will be developed from first principles and these methods will then be tested using various modeling and computational software packages. Methods will include, but are not limited to, molecular mechanics, semi-empirical molecular orbital calculations, ab initio methods, and density functional calculations. Students will be exposed to various computational software packages and the strengths and limitations of each methodology will be explored. The course will meet in a computer laboratory for two for three-hour lab periods a week.

Prerequisite(s): CHE 305.

CHE 400 Chemical Bonding 3 Credits

The effects of the chemical bond on the structure and properties of molecules are investigated. Molecular orbital theories of bonding are introduced. Emphasis is placed on group theoretical methods utilizing molecular symmetry to simplify the description of the electronic structure of molecules and to predict their geometric structures and reactivity. Three hours of lecture per week.

Prerequisite(s): CHE 305, MTH 212.

CHE 415 Special Topics in Chemistry 3 Credits

An advanced level of one or more areas of modern chemistry. Emphasis on research and the literature of an area of current importance. Three hours of lecture per week.

CHE 420 Physical Organic Chemistry 4 Credits

In-depth studies of the methods for elucidating mechanisms of organic reactions for students who have completed one year of organic chemistry and physical chemistry. Topics include conformational analysis, linear free energy relationships, frontier molecular orbital theory, transition state theory, and chemical reaction kinetics. Isotopic scrambling, kinetic isotope effects, NMR and IR spectroscopy, polarimetry, and ultraviolet-visible spectrophotometry will be employed to investigate these concepts. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): CHE 214, CHE 305.

Corequisite(s): CHE 214L.

CHE 420L Physical Organic Chemistry Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 420.

CHE 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

CHE 491 Internship in Chemistry 1-4 Credits

A supervised research experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in a private, public, non-profit, or governmental organizations under the guidance of a mentor. The mentor and student will have regular consultation with the departmental internship coordinator to assess the student's progress. Normally, 50 hours of internship per credit is required. The grade for the course will be determined by the students' overall performance in their research work, a research paper documenting their work with their internship mentor and an oral or poster presentation at the end of the semester.

Prerequisite(s): 2.5 GPA and permission of the instructor.

ENV 100 Introduction to Environmental Sciences 4 Credits

Examines how ecosystems function, with emphasis on the interactions between biological organisms and their physical environment, and the chemical processes that govern these interactions. The impact of human populations on natural ecosystems is investigated in detail using case studies from history and current events. The laboratory provides for hands-on experiences and/or short field trips to local sites for a better understanding of many of the concepts discussed. Weekday and weekend field trips may be required. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 100L.

ENV 100L Introduction to Environmental Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 100.

ENV 200 Statistical and Computer Applications in the Natural Sciences 4 Credits

This course introduces important statistical concepts, their application, and the usage of computer technology relevant to biological, environmental, geological, and marine problems. Students will learn various graphical and statistical techniques and how to execute them on personal computers. The curriculum emphasizes the integrated nature of these techniques and their importance to meaningful data evaluation and representation. Laboratory exercises are designed to emphasize useful solutions to problems found in many scientific disciplines using computer-based methodologies. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 200L.

ENV 200L Statistical and Computer Applications in the Natural Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 200.

ENV 205 Introduction to Geographic Information Systems (also cross listed as GLS-205) 3 Credits

This course introduces the computer-based concepts and skills of Geographic Information Systems (GIS). It covers the basic GIS concepts, such as map characteristics and projections, spatial data models and analysis, and relational databases. It explores data sources, data quality, and metadata, as well as implementation and management of specific GIS projects. Hands-on experience with ArcGIS software is provided through a series of student exercises completed throughout the semester. Students will also be taught how to process both vector and raster data using ArcGIS software. The course is relevant for students from numerous disciplines in the natural sciences, social sciences, and business, which require the analysis and graphical representation of spatial data. Three hours of lecture per week. Note: This course is cross-listed as GLS 205. Students may not receive credit for both ENV 205 and GLS 205.

ENV 220 Weather and Climate Change 3 Credits

This course introduces students to the concepts of weather and climate change. These concepts frame a continuum from short-term or daily changes in the atmosphere (meteorology) to those changes averaged over much longer periods of time (climatology). Students will learn the fundamentals of weather forecasting, the causes of natural variation in the Earth's climate, and the impact of human actions on the Earth's climate. Connections will be drawn to other current issues in the Earth system, including land use change, biodiversity, and pollution. Three hours of lecture per week.

Prerequisite(s): GEO 100 or permission of instructor.

ENV 290 Directed Research and Study in Environmental Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the environmental sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in weekly meetings with the instructor, and communicating the findings by writing a final project report.

ENV 340 Environmental Field Methods and Data Analysis 3 Credits

This course will provide students with practical experience in field methods and data analyses within the environmental sciences. The course will include advanced activities incorporating field-based exercises, GIS analyses, statistical analyses, and database management. Students will also complete an independent project focused on a relevant topic. Local field trips during lab and on weekends may be required.

Prerequisite(s): MTH 105, GEO 100, GEO 102, and ENV 100; or Permission of Instructor.

ENV 350 Principles of Environmental Toxicology 3 Credits

A comprehensive description of the important principles of toxicology, including the absorption, distribution, metabolism, and excretion of toxic substances. Target organs systems will be discussed as well as mechanisms of carcinogenesis and teratogenesis. Specific groups of toxins to be discussed include: pesticides, metals, radiation, solvents and vapors, and plant and animal toxins. Three hours of lecture per week.

Prerequisite(s): BCH 225 or CHE 211, BIO 115 or BIO 117.

ENV 375 Environmental Biogeochemistry 3 Credits

This course examines the biogeochemical interactions among various environmental components, including water, rock, soil, organisms, and atmosphere. Covered topics focus on the relation between the biosphere and changes in the Earth's environment and atmosphere. The transfer of energy and nutrients within terrestrial ecosystems also is explored. Case studies from various examples will be used to understand ecosystem dynamics. Long-term environmental change and present-day ecosystem restoration activities are examined in the context of biotic offsets and land-use planning. The biogeochemical cycles of some environmentally sensitive compounds and elements in natural systems, such pesticides, mercury, and lead, also may be examined. Three hours of lecture per week.

Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121, CHE 122, CHE 123.

ENV 480 Senior Thesis 3 Credits

A senior thesis is optional for environmental science majors. However, a senior thesis is required for eligibility to graduate with honors in environmental science. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

ENV 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

ENV 491 Internship in Environmental Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

GEO 100 Earth Systems Science 3 Credits

Investigates the major global processes that occur on Earth. These processes can be grouped into four major systems: atmosphere, hydrosphere, lithosphere, and cosmosphere. Each system interacts with and affects the other systems creating, in a sense, a single Earth process. With this approach, the student will view the Earth as a whole, and understand that the many seemingly separate components that make up this planet are, in fact, a set of interacting processes, that operate in cycles through time, within a single global system. Three hours of lecture per week.

GEO 102 Earth Materials and Processes Lab 1 Credits

A hands-on laboratory experience involving the origin, significance, identification, and classification of Earth materials and processes. Mineral and rock specimens, soil and water samples, and topographic and geologic maps are utilized. Numerous field trips to local sites help students visualize many of the concepts discussed. One three-hour lab per week.

Prerequisite(s): concurrent enrollment in, or prior completion of, GEO 100 or GEO 113 is required.

GEO 113 Environmental Geology (also cross listed as GLS-113) 3 Credits

Examines the fundamental premise that "our society exists by geologic consent subject to change without notice" by studying a number of important geologic processes and cycles, and the hazards and/or resources they present to individuals, society, and the natural environment. Topics discussed include earthquakes, volcanism, stream flooding, coastal erosion, climate change, and water, soil, mineral, and energy resources. Cost/benefit considerations, hazard mitigation concepts, economic and political ramifications, and the interactions among the lithosphere, hydrosphere, atmosphere, and biosphere also are presented. The course is designed to give non-science majors a deeper appreciation of their connection to the surrounding geologic environment, leading to better, more informed business, political, policy, and personal decisions. Three hours of lecture per week. Note: This course is cross-listed as GLS 113. Students may not get credit for both GEO 113 and GLS 113.

GEO 168 Mesozoic Ruling Reptiles 3 Credits

A survey of the vertebrate groups that dominated the land (Dinosaurs), the seas (Mosasaurs, Plesiosaurs, Pliosaurus, Tylosaurus, and Ichthyosaurs) and the skies (Pterosaurs, Pterodactyls) during the Mesozoic Era. The course considers diversity of skeletal architectures and their reconstructed function and the often controversial, inferred anatomy, physiology, reproductive strategy, habit, and social behaviors of these animals that are different from mainstream reptiles, birds, and mammals. It also covers the paleogeographical, and paleoclimatological conditions that facilitated the evolutionary rise to dominance and diversification of these vertebrate groups and the debated causes of their eventual extinction. Three hours of lecture per week. Weekend field trips may be required.

GEO 201 Elements of Mineralogy 4 Credits

The physical properties, chemistry, atomic structure, crystallography, uses, and environmental impacts of important minerals of the lithosphere and biosphere are presented. In addition, lab assignments and exercises emphasize crystal symmetry and chemistry; polarizing microscope, ICP, and x-ray analytical techniques; the graphical display and interpretation of compositional data; optical properties of isotropic and uniaxial minerals; and the identification of mineral hand specimens. Three hours of lecture and one three-hour lab per week. At least one weekend field trip required. Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121 taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 201L.

GEO 201L Elements of Mineralogy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 201.

GEO 290 Directed Research and Study in Geosciences 1-4 Credits

Directed Research and Study in Geosciences will provide an opportunity for freshman and sophomore students to gain hands-on research experience in the geosciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

GEO 305 Petrology and Petrography 4 Credits

The origin, evolution, and terrestrial distribution of igneous and metamorphic rocks are presented and detailed. Classroom lectures and discussions emphasize rock geochemistry, mineralogic variability, the constraints placed on petrogenetic models by physio-chemical studies of natural and synthetic systems, and the relation of the various rock types to current plate tectonic theory and other whole-earth processes. The laboratory emphasizes the continuing development of optical microscopy skills, the identification of rock texture and mineralogy in thin section and hand specimen, the optical determination of mineral composition, and the recognition of possible petrogenetic processes as recorded in the rocks themselves. Three hours of lecture and one three-hour lab per week. Two weekend field trips required. Prerequisite(s): GEO 201, and CHE 122 and CHE 123 or taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 305L.

GEO 305L Petrology and Petrography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 305.

GEO 306 Sedimentology and Stratigraphy 4 Credits

The principles of weathering, erosion, transportation, and deposition of sediment are the focus of this course. Sediment characteristics are examined to identify the processes involved in transporting grains and the specific environment in which the grains were deposited. Students will learn how to collect, analyze, and interpret sedimentary data and how to interpret surface and subsurface stratigraphic data using various techniques, such as lithostratigraphic, biostratigraphic, and geophysical, correlations. Field trips will expose students to different sedimentary environments and provide opportunities for students to learn how to conduct fieldwork. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): GEO 100.

Corequisite(s): GEO 306L.

GEO 306L Sedimentology and Stratigraphy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 306.

GEO 310 Structural Geology 4 Credits

The origin, distinguishing characteristics, and geographic distribution of deformational structures of the Earth's crust. In the laboratory, GPS, GIS, geologic maps, and three-dimensional problems are used in the study of typical surface and subsurface geologic problems. Three hours of lecture and one three-hour lab per week. Weekday and/or weekend field trips may be required. Prerequisite(s): GEO 100 or GEO 113, GEO 102.

Corequisite(s): GEO 310L.

GEO 310L Structural Geology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 310.

GEO 350 Soil and Surficial Processes 4 Credits

This course examines the physical, chemical, hydrological, and biological aspects of soil and their relation to geomorphologic development. Specific topics include descriptions of soil texture and structures, soil classification, soil colloids, soil redox and pH, and their effect on vadose zone water chemistry. Soil genesis and erosion controls, microbiology/ecology, nutrient cycles, and modern soil pollution from sludge and pesticide applications, as well as domestic and industrial chemical spills, also are discussed. The lab portion of the course introduces the basic techniques of soil analysis, both physical and chemical, and field survey methods. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, and GEO 102.

Corequisite(s): GEO 350L.

GEO 350L Soil and Surficial Processes Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 350.

GEO 407 Hydrology and Water Resources 4 Credits

This course introduces the principles that govern both surface water and groundwater flows that have applications to societal water needs. Surface water topics cover the basics of the hydrologic cycle, the processes of precipitation, evapotranspiration, runoff, and infiltration, and various factors affecting water supply and water quality issues in a modern watershed. Groundwater topics examine the principles that govern flow through a porous medium and the basics of well hydraulics under different pumping conditions that community development requires. Laboratory exercises will give students hands-on experience with the delineation of watersheds, analysis of precipitation data, and flow contaminant transport modeling. The field portion of the laboratory includes runoff and stream discharge measurements, as well as hydraulic conductivity estimations from both slug and pumping tests. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, GEO 102, and MTH 105.

Corequisite(s): GEO 407L.

GEO 407L Hydrology and Water Resources Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 407.

GEO 480 Senior Thesis 3 Credits

A senior thesis is optional for geosciences majors. However, a senior thesis is required for eligibility to graduate with honors in geosciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

GEO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

GEO 491 Internship in Geosciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 120 Oceanography 3 Credits

Investigates the interrelationships among the geological, chemical, physical, and biological aspects of oceanography. Topics include origin and evolution of ocean basins; physical characteristics of modern oceans; seawater chemistry; ocean and atmosphere interactions; ocean currents; waves and tides; coastal processes; biological productivity; and diversity, distribution and adaptations of marine organisms. Throughout the course, emphasis is placed on the processes that connect the seemingly separate topics to each other and to human life. Weekend field trips may be required. Three hours of lecture per week. Note: This course is cross-listed as GLS 120. Students may not get credit for both MAR 120 and GLS 120.

MAR 121 Introductory Oceanography Lab 1 Credits

Introduction to the fundamental aspects of geological, chemical, physical, and biological oceanography. Students learn through inquiry-based, hands-on exercises and activities using actual data collected in the lab and in the field. Independent projects and local field trips during lab and on weekends may be required. One three-hour lab per week.

Corequisite(s): MAR 120 or GLS 120 or as prerequisite(s).

MAR 210 Marine Life Through Time 4 Credits

Survey of the important developments in marine life over the last three billion years from the Pre-Cambrian evolution of one-celled organisms, through the Cambrian explosion of complex marine invertebrate life and subsequent diversification of backboned organisms in the Ordovician time, to the colonization of marginal marine and freshwater habitats in the Silurian-Devonian geological periods, and ultimately to extinctions during global crises of the late Devonian, Permian, Triassic, Cretaceous, and Pleistocene time intervals. The emphasis is on evolutionary adaptive breakthroughs within each phylum, particularly the significant morphological and anatomical innovations, and the subsequent radiation of these higher taxa into new habitats and niches through geologic time. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): GEO 100 or GEO 113, GEO 102 or BIO 115 or permission of instructor.

MAR 210L Marine Life Through Time Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 210.

MAR 227 Introduction to Field Marine Science: Subtropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in subtropical environments, emphasizing shallow subtidal and intertidal environments such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include the diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a subtropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 228 Introduction to Field Marine Science: Boreal Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in boreal environments, emphasizing the rocky shallow subtidal and intertidal environments. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; day-night fluctuations in tide pool chemistry; plankton dynamics; predator-prey relationships; the physical processes and chemical properties of water; and comparisons of wave-exposed and wave-protected sides of a shoreline. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a boreal environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 229 Introduction to Field Marine Science: Tropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in tropical environments, emphasizing the shallow subtidal and intertidal environments, such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a tropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 290 Directed Research and Study in Marine Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the marine sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

MAR 325 Marine Vertebrates 4 Credits

A survey of the biology of marine vertebrate animals, including fish (jawless fish, sharks, rays, and bony fish), reptiles (sea turtles and sea snakes), sea birds, and mammals (manatees, seals, and whales). The evolution, physiology, natural history, ecological relationships, and human interactions of these groups are emphasized. Three hours of lecture and one three-hour lab per week. Field trips may be required. Prerequisite(s): BIO 272 and BIO 272L.

Corequisite(s): MAR 325L.

MAR 325L Marine Vertebrates Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 325.

MAR 330 Chemical Oceanography 4 Credits

Introduction to the chemical aspects of the oceans and their influence on marine ecosystems and Earth processes. Emphasis is placed on chemical and physical properties of seawater, atmosphere-ocean interactions, biogeochemical cycles with marine components, production and destruction of marine organic matter, chemical ecology, and marine pollution. During the lab portion of this course, students gain hands-on experience in analyzing ocean water samples, experimental design, and interpreting marine chemical data. Three hours of lecture and one three-hour lab per week. Weekend field trips and independent projects may be required. Prerequisite(s): CHE 120, CHE 121, MAR 120, and MAR 121; or permission of instructor.

Corequisite(s): MAR 330L.

MAR 330L Chemical Oceanography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 330.

MAR 340 Marine Processes and Environments: Seminar 3 Credits

This course is designed as a seminar course. Therefore, students will learn to lead class discussions, to analyze and critique peer-reviewed journal articles, and to enhance their presentation skills. Students will interpret graphical, spatial, and numerical data to support their positions. Content will emphasize the interactions among marine processes, biological features, and geologic landforms.

Prerequisite(s): MAR 120 or GEO 100; GEO 306.

MAR 360 Plankton Ecology 4 Credits

Examines the diversity, physiology, and ecology of marine phytoplankton and zooplankton. Students will survey the dominant plankton groups, their distribution, nutritional requirements, growth kinetics, and behavior. Planktonic predator/prey interactions and food web dynamics will be discussed. Students will also examine the interdisciplinary nature and role of plankton in biogeochemical cycles. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): MAR 120 and MAR 121; or BIO 116.

Corequisite(s): MAR 360L.

MAR 360L Plankton Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 360.

MAR 380 The Learning and Teaching of Marine Science 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

MAR 401 Marine Ecology 4 Credits

The purpose of this course is to introduce students to fundamental principles in ecology, as it relates to marine systems. Topics include the marine environment and its influence on the organisms living there; biodiversity and speciation; factors regulating population dynamics in marine systems; larval and fisheries ecology; species interactions such as predation, competition, and symbiosis; factors regulating productivity and energy flow in marine systems; and marine conservation. Hands-on laboratory exercises will provide students with the opportunity to design and conduct experiments related to marine ecology, and to collect, analyze, and interpret data from those experiments. Ecosystem modeling will also be introduced. Three hours of lecture and one three-hour lab per week. Weekend field trips may be introduced. Prerequisite(s): BIO 272, BIO 272L.

Corequisite(s): MAR 401L.

MAR 401L Marine Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 401.

MAR 410 Physical Oceanography 3 Credits

Introduction to the physical aspects and processes of the oceans and their influence on marine ecosystems and Earth processes. Topics include distribution of salinity and water temperature and their effect on water movement, the oceanic heat budget, atmospheric and oceanic interactions, ocean currents including surface and deep water circulation, waves, tides, and medium- to small-scale circulation features. Throughout the course, emphasis is placed on how these physical processes affect the biology and chemistry of the ocean. Three hours of lecture per week. Weekend field trips may be required.

Prerequisite(s): MAR 120.

MAR 480 Senior Thesis 3 Credits

A senior thesis is optional for marine sciences majors. However, a senior thesis is required for eligibility to graduate with honors in marine sciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the marine sciences major and permission of department chair.

MAR 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

MAR 491 Internship in Marine Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 580 Ind Marine Sci Field Study 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

PHY 100 Principles of Physics I 3 Credits

Introductory noncalculus physics with applications for pre-professional, biology, and geological, environmental and marine sciences majors. Classical mechanics, energy, mechanical waves, fluid statics and dynamics, thermodynamics. Elements of modern physics are interwoven with those of classical physics from the beginning. Not open to chemistry, physics, or mathematics majors. Three hours of lecture per week. Prerequisite(s): MTH 105, MTH 210, MTH 211 or MTH 212.

Corequisite(s): PHY 100L.

PHY 100L Principles of Physics I Lab 1 Credits

For students concurrently taking PHY 100. One three-hour lab per week.

Corequisite(s): PHY 100.

PHY 101 Principles of Physics II 3 Credits

Continuation of Physics 100. Electrostatics, electricity, and magnetism; DC and AC circuits, physical and geometrical optics, introduction to elementary particle and quantum physics. Three hours of lecture per week. Prerequisite(s): PHY 100.

Corequisite(s): PHY 101L.

PHY 101L Principles of Physics II Lab 1 Credits

For students concurrently taking Physics 101. One three-hour lab per week.

Corequisite(s): PHY 101.

PHY 103 Science of Light and Color 3 Credits

An introduction to the science of light, color, and optics. Covers history of theories of light and vision, applications in art, photography, natural phenomena (rainbows, mirages, etc.), and modern technology, e.g., lasers and telecommunications. Many topics are illustrated by in-class demonstration experiments with lasers and other optical devices.

PHY 104 Energy, the Environment & Man 3 Credits

The many vital roles played by energy in the universe at large, on the earth, and in the activities of man are examined, including the basic sources of energy, the impact upon the environment due to these processes and possible future sources. A high school course in physics or chemistry is desirable but not necessary.

PHY 105 Matter, Forces, Energy: Explor'n 4 Credits

An introduction to the basic principles of physics focusing on the concepts of matter, force, and energy. The course will study, in depth, simple physical systems chosen to emphasize the interconnection of these three basic concepts. It will explore the behavior of these simple physical systems using directed group exercises coordinated with hands-on laboratory activities. One three-hour lecture and one three-hour lab per week.

PHY 105L Matter, Forces and Energy Lab 0 Credits**PHY 180 Astronomy 3 Credits**

Examines mankind's quest to understand the origin and form of the universe. Emphasis on the ideas of modern cosmology and their impact on our changing perception of our place in the universe, making use of information gleaned by simply looking at the night sky as well as post Apollo-era views of the solar system and the evolving universe as a whole.

PHY 200 General Physics I 4 Credits

Introductory classical physics; Newtonian mechanics, including the conservation laws, wave motion, gravity, thermodynamics. Three hours of lecture and one three-hour lab per week. Prerequisite(s): MTH 210 or as corequisite.

Corequisite(s): PHY 200L.

PHY 200L General Physics I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PHY 200.

PHY 201 General Physics II 4 Credits

A continuation of the concepts developed in Physics 200. Electricity, electrical circuits, magnetism, Maxwell's equations. Light and optics, including lenses, interference, and diffraction. Three hours of lecture and one three-hour lab per week. Prerequisite(s): PHY 200, MTH 211 or concurrent enrollment.

Corequisite(s): PHY 201L.

PHY 201L General Physics II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PHY 201.

PHY 203 Introduction to Modern Physics 3 Credits

Covers space-time relativity, elementary particles, and basic quantum mechanics, including solutions of the Schrodinger wave equation. Applications of quantum theory in atomic, nuclear, and solid-state physics.

Prerequisite(s): PHY 201 or permission of instructor.

PHY 250 Scientific Computing 3 Credits

Introduces students to modern techniques and applications of scientific computing. Students will learn to write code in python, a popular, modern programming language used by scientists and industry around the world. They will also retrieve and analyze large datasets using SQL, a standard database language. Students will develop their own software and learn to manage it online using github, an online code repository.

PHY 300 Mechanics 3 Credits

Kinematics and dynamics of particles and systems, analysis of harmonic oscillator systems, normal modes, Lagrangian and Hamiltonian dynamics and classical waves are studied.

Prerequisite(s): PHY 201, MTH 250.

PHY 305 Electricity and Magnetism 3 Credits

Electro- and magnetostatics, fields and potentials, and boundary value problems are covered.

Prerequisite(s): PHY 201, MTH 250.

PHY 310 Adv Electricity and Magnetism 3 Credits

Maxwell's equations; electromagnetic waves in vacuum and in material media; radiation, propagation, reflection, and refraction.

Prerequisite(s): PHY 305, MTH 308.

PHY 315 Thermodynamics/Stat Mechanics 3 Credits

Thermodynamic systems; the first and second laws of thermodynamics; entropy and thermodynamic potentials; distribution of molecular speeds; Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac distributions.

Prerequisite(s): PHY 201.

PHY 320 Quantum Mechanics 3 Credits

Historical background; the Bohr Theory; the Schrodinger equation, its interpretation and applications; the uncertainty and exclusion principles; development of the formalism.

Prerequisite(s): PHY 300.

PHY 330 Basic Electronics 3 Credits

An experimental study of devices and circuits in analog and digital electronics. No previous experience with electronic circuits is assumed; introductory topics including signal acquisition, computer interfaces, and analog/digital signal processing will be covered. One hour of lecture plus two three-hour labs per week.

Prerequisite(s): PHY 201 or permission of instructor.

PHY 350 Advanced Laboratory 2 Credits

Experiments in atomic and nuclear physics, electricity and magnetism, and physical optics. Students have the opportunity to work intensively on a particular experiment. Minimum of five to six hours per week.

PHY 400 Atomic Physics 3 Credits

Quantum mechanics and the one-electron atom; atomic structure and optical spectra of multi-electron atoms. Quantum statistics, band theory of solids.

Prerequisite(s): PHY 320.

PHY 405 Fundamentals Nuclear Physics 3 Credits

Nuclear mass and size; nuclear forces and some models of the nucleus; radioactivity and detection; subnuclear particles and resonances.

Prerequisite(s): PHY 320.

PHY 415 Physical Optics 3 Credits

Waves and the superposition principle; interference, Fraunhofer and Fresnel diffraction; electromagnetic nature of light; absorption and scattering; dispersion; polarization.

Prerequisite(s): PHY 201, MTH 250.

PHY 416 Modern Experimental Optics Lab 1 Credits

A laboratory course in geometrical and physical (wave) optics, designed to supplement the material presented in PHY 415. Serves as an introduction to the optical equipment and techniques that are employed in laboratory research. A series of experiments cover the topics of polarization, interference, image formation, Fourier optics and lasers, and optical spectroscopy.

Prerequisite(s): PHY 201.

PHY 450 Topics in Modern Physics 3 Credits

A selected topic of contemporary interest in physics, e.g., general relativity and gravity waves, is studied. Emphasis on current journal literature and research. May be taken more than once with departmental approval. An excellent introduction to independent research in one area of physics.

Prerequisite(s): PHY 201.

PHY 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

PHY 491 Internship in Physics 1-4 Credits

A supervised research experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations under the guidance of a mentor. The mentor and student will have regular consultation with the departmental internship coordinator to assess the student's progress. Normally, 50 hours of internship per credit is required. The grade for the course will be determined by the student's overall performance in their research work, a research paper documenting their work with their internship mentor and an oral or poster presentation at the end of the semester.

Prerequisite(s): 2.5 GPA and permission of the instructor.

Marine Sciences

Program Overview

The Marine Sciences major prepares students for meaningful and productive post-baccalaureate employment and/or admission to high-quality graduate programs. Although administered by the Department of Geological, Environmental, and Marine Sciences (GEMS), the Marine Sciences major is truly interdisciplinary in nature, both in its curriculum and faculty. The program investigates and emphasizes the

multiple feedback interactions among unicellular and vertebrate marine organisms, the physiochemistry of the water in which they live, and the substrates in or on which they dwell. Often, students who major in the Marine Sciences also double major or minor in the following programs: Biology, Chemistry, Earth and Environmental Sciences, Environmental Sciences, Geosciences, and Psychology (for marine mammal training).

Curriculum Overview

A number of different Marine Sciences field courses are offered by GEMS and are taught during the spring/summer at various field stations, including the Bermuda Institute of Ocean Sciences (BIOS), Bermuda; the Newfoundland Marine Institute, Big Pine Key, Florida; and, in most years, the Roatan Institute of Marine Sciences (RIMS), Roatan, Honduras.

Rider University also is a member of the New Jersey Marine Sciences Consortium.

These field courses focus on the biological, physiochemical, and sedimentological aspects of various habitats, which can include mangrove, rocky intertidal, sponge, coral reef, kelp bed, and soft coral communities, depending upon location. Course emphasis is on team exercises in each habitat, team mapping projects, and individual experimental projects. Most habitats are located in shallow water accessible by wading or snorkeling. SCUBA certification is not required or needed for these courses.

Honors Program in Marine Sciences

Honors in Marine Sciences are awarded in recognition of majors who have demonstrated outstanding academic ability. Enrollment in the program is by invitation of the department faculty. Eligibility requirements include maintenance of at least a minimum GPA of 3.5 in courses required for the major and satisfactory completion of an independent research and study project or a senior thesis. In addition, an honors candidate must maintain an overall GPA of 3.0.

Total Credits

Note:

- Majors will also take either MTH 105 or MTH 210 to fulfill their math core requirement.

Marine Sciences Minor Requirements

(23-24 credits)

Marine Sciences majors may not select this minor.

BIO 115	Principles of Biology I	4
or BIO 116	Principles of Biology II	
BIO 272	Intro to Marine Biology	3
BIO 272L	Marine Biology Laboratory	1
GEO 100	Earth Systems Science	3
GEO 102	Earth Materials and Processes Lab	1
MAR 120	Oceanography	3
MAR 121	Introductory Oceanography Lab	1
Select one of the following:		

MAR 227 Introduction to Field Marine Science: Subtropical Environments

MAR 228 Introduction to Field Marine Science: Boreal Environments

MAR 229 Introduction to Field Marine Science: Tropical Environments

MAR 380 The Learning and Teaching of Marine Science

Electives

Select one of the following:		
GEO 306	Sedimentology and Stratigraphy	3-4
MAR 325	Marine Vertebrates	
MAR 330	Chemical Oceanography	
MAR 360	Plankton Ecology	
MAR 410	Physical Oceanography	

Total Credits 23-24

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Course	Title	Semester Credit Hours
Year 1		
Fall Semester		
CMP 120	Expository Writing ¹	3
MAR 120	Oceanography	3
MAR 121	Introductory Oceanography Lab	1
BIO 115	Principles of Biology I	4
BIO 115L	Principles of Biology I Lab	0
MTH 105	Algebra and Trigonometry ¹	4
NCT 010	Freshman Seminar	0
Semester Credit Hours		15

Spring Semester

CMP 125	Research Writing	3
GEO 100	Earth Systems Science	3

42-43

107-108

GEO 102	Earth Materials and Processes Lab	1
Social Science Core Course (1 of 2)		3
Foreign Language Core Course (Level 1)		3
Fine Arts Core Course		3
Semester Credit Hours		16

Year 2**Fall Semester**

CHE 120	Principles of Chemistry	3
CHE 121	Principles of Chemistry Lab	1
ENV 200	Statistical and Computer Applications in the Natural Sciences	4
BIO 272	Intro to Marine Biology	3
BIO 272L	Marine Biology Laboratory	1
Foreign Language Core Course (Level 2)		3

Note: Natural and Physical Science core requirements are included in the major.

¹ For course placement information see <http://www.rider.edu/offices-services/orientation/course-placement>

² Please note that elective credits may be used to complete requirements in a second major or minor.

BIO 100 Life Science:Human Emphasis 3 Credits

An examination of mammalian physiology and development at the cellular and organ system level, with emphasis on physiological homeostasis in man. Three hours of lecture per week.

BIO 101 Life Science:Genetics Emphasis 3 Credits

An examination of cell biology and genetics, with emphasis on the impact of these fields on human affairs. Three hours of lecture per week.

BIO 103 Life Sci:Ecobotanical Emphasis 3 Credits

Plant biology with emphasis on ecological interactions and economic uses. Three hours of lecture per week.

BIO 105 Life Science and Society 3 Credits

This course will highlight current scientific knowledge and the state of ongoing inquiry in often-misunderstood topics related to health and medicine. Topics will include, but are not limited to, stem cells, embryo editing, vaccination, genetic modification of food and animals, and the process of drug development. Throughout this course, students will learn basic cell biology and genetics as a foundation for scientific understanding in itself as well as how to detect misconceptions and myths related to science, healthcare, and medicine.

BIO 106 Life Science:Human Disease 3 Credits

An introduction to molecular, cellular, and human biology with emphasis upon diseases and disorders caused by mutation, bacteria, viruses, or parasites. The biology of human aging is also discussed. Three hours of lecture per week.

BIO 108 Life Sci: Biol of Human Aging 3 Credits

An introduction to the biology of aging manifest in the cells, tissues, and organs of animals and humans. Three hours of lecture per week.

BIO 109 From the Big Bang to Origins of Life 3 Credits

This course is a non-major science core course focusing on the interactions among astronomy/physics, chemistry, geology and biology. A consensus story has emerged about our origins from scientific insights obtained over the last 400 years. Many know this story that began with the Big Bang and proceeded through the origin of the galaxies and the origin of the elements to the origin of our sun, earth and solar system. The origin of the earth gave rise to the origin of life, evolution of bacteria, viruses, plants and animals, creation of ecosystems and ultimately the evolution of humans. We will proceed through the science slowly. By doing so we can take the information from all of the sciences and reflect upon it. The result of will be an enhanced appreciation for both the process of science and the awesome information we have learned about the natural world as well as ourselves. The study of our origins reveals that humans, all life, and our planet are intimately related.

BIO 110 Life Science: Inquiry Approach 4 Credits

An introductory course for non-science majors in which students develop an understanding of biological evolution, the molecular basis of heredity, the cell, matter, energy and organization in living systems, and the interdependence of organisms. In addition, students will develop an understanding of science as a human endeavor, the nature of scientific knowledge, and historical perspectives. Through investigative activities, students will develop an understanding about scientific inquiry and develop abilities necessary to do scientific inquiry. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 110L.

BIO 110L Life Sci: Inquiry Approach Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 110.

BIO 115 Principles of Biology I 4 Credits

An introductory biology course focusing on major themes of biology: what is life?; Cells as fundamental structure and functional unit of life; information transmission, storage and retrieval; Diversity and unity of life explained by evolution. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 115L.

BIO 115L Principles of Biology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 115.

BIO 116 Principles of Biology II 4 Credits

An introductory biology course focusing on major themes of biology: Energy and matter to carry out life's essential functions; Interdependent relationships characterize biological systems (homeostasis, growth & development); Behavior of living things; Ecology and the environment. Three hours of lecture and one three-hour lab per week.

Corequisite(s): BIO 116L.

BIO 116L Principles of Biology II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 116.

BIO 206 The Pharmaceutical Industry 3 Credits

An introduction to drug discovery and development. Topics include how drugs are used to diagnose, cure, treat, and prevent disease and how drugs affect body function. The origins of diseases and the early attempts at treatment are also covered. Designed for business majors; does not satisfy requirements for the biology major.

Prerequisite(s): BIO 100 or BIO 101 or BIO 106 or BIO 108 or BNS 107 or CHE 115.

BIO 210 Hospital Intern Program 2 Credits

An internship that provides students with the experience in the practical aspects of medicine. Major departments in the hospital such as the emergency room, operating room, clinic, radiology, and the laboratory will be open for student rotations. Field trips to various medical schools in the area will provide information on professional school educational opportunities available in the health professions.

Prerequisite(s): sophomore standing or above and permission of instructor.

BIO 215 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): BIO 115/115L and BIO 116/116L.

Corequisite(s): BIO 215L.

BIO 215L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 215.

BIO 221 Human Anatomy & Physiology I 4 Credits

A comprehensive survey of the structure and function of musculo-skeletal systems, neuroendocrine systems and related tissues and cellular interactions. Physiological applications include homeostasis, muscle dynamics, and cell activities. Laboratory exercises complement lecture material through the use of animal dissections, wet labs, computer-assisted investigations, microscopy, and models. Exams, case histories, personal investigations, and lab practicums assess learning. Course emphasis supports allied health and pre-professional training. Three hours of lecture and one three-hour lab per week. Designed for allied health students; does not satisfy requirements for the biology major. **Prerequisite(s):** BIO 115.

Corequisite(s): BIO 221L.

BIO 221L Human Anatomy & Physiology I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 221.

BIO 222 Human Anatomy & Physiology II 4 Credits

A comprehensive survey of the organ systems of the body including special senses, cardiovascular, respiratory, digestive, excretory, reproduction and development. Physiological components include electrolytes, metabolism, nutrition, and the mechanisms of homeostasis and cell reception. Lab studies support lecture material through dissections, wet labs, computer-assisted learning, microscopy, and models. Assessment includes lab practicums, exams, and reports. Course emphasis supports allied health and pre-professional training. Designed for allied health students; does not satisfy requirements for the biology major. **Prerequisite(s):** BIO 221.

Corequisite(s): BIO 222L.

BIO 222L Human Anatomy & Phys II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. **Prerequisite(s):** BIO 221L.

Corequisite(s): BIO 222.

BIO 260 Principles of Biology: Evolution, Diversity, and Biology of Cells 4 Credits

Lectures and labs focus on basic cell biology. Cell diversity and function, genetics and biotechnology are emphasized. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** BIO 115 & BIO 116.

Corequisite(s): BIO 260L.

BIO 260L Principle of Biology: Cells Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 260.

BIO 265 Genetics 4 Credits

A comprehensive course focusing on molecular, Mendelian, and population genetics. Topics covered will include molecular advances in the study of genetics, including genomics and bioinformatics; evolution and the effects of genetic mutations; the application of population genetics to forensic science; genetic problem solving, including genetic crosses and statistical analysis; and regulation of gene expression. The laboratory for this course will introduce students to commonly used genetic model organisms and basic molecular biology techniques. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 265L.

BIO 265L Genetics Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 265.

BIO 272 Intro to Marine Biology 3 Credits

Introduces students to the study of marine environments, emphasizing the diversity, ecology, and physiology of marine animals, algae, and plants. Aspects of the human impact on marine environments are also discussed. Prerequisite(s): BIO 115 or BIO 116 or BNS 118 and grade of "C" or better.

Corequisite(s): BIO 272L.

BIO 272L Marine Biology Laboratory 1 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 272.

BIO 290 Special Topics in Biology 3 Credits**BIO 300 Developmental Biology 4 Credits**

Lectures and laboratories explore molecular, cellular, and genetic mechanisms of animal development. Aspects of gametogenesis, fertilization, induction, cytoplasmic determinants, morphogenetic movements, differentiation and developmental evolution are discussed. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 300L.

BIO 300L Developmental Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 300.

BIO 305 Vertebrate Physiology 4 Credits

Study of the principles and mechanisms of mammalian physiology. Topics include the nervous system, muscle physiology, cardiovascular physiology, respiration, gastrointestinal activity, renal function, and endocrine physiology. Lectures and laboratory exercises emphasize homeostatic mechanisms and organ-system interactions. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 305L.

BIO 305L Vertebrate Physiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 305.

BIO 315 Medical Microbiology 4 Credits

Biology of prokaryotes of medical interest with emphasis placed on diversity and host-pathogen interaction. Current research literature will be covered and presented by students. Methods of microbial identification are introduced in the laboratory and applied in the identification of mock clinical isolates. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116 or BNS 118, BIO 117.

Corequisite(s): BIO 315L.

BIO 315L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 315.

BIO 321 Microbiology 4 Credits

An introduction to the discipline of microbiology, with an emphasis on the biology of prokaryotes found in all the natural realms of our environment, including the oceans, soil, atmosphere, and extreme habitats. Emphasis will be placed on microbial diversity, fundamental microbial processes, and the continual interaction between microbes and the natural environment. Classical and modern methods of identification are introduced in the laboratory. Three hours of lecture and one three-hour lab per week. Some field trips are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 321L.

BIO 321L Microbiology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 321.

BIO 335 Plant Biology 4 Credits

Biology of seed plants, including growth, development, and reproduction of flowering plants. Emphasis is placed on acclimation and adaptations demonstrating environmental influences on plant structure and function. Current literature involving molecular mechanisms of control will be discussed. Three hours of lecture and one three-hour lab per week. One Saturday field trip. Prerequisite(s): BIO 115, BIO 116, CHE 122.

Corequisite(s): BIO 335L.

BIO 335L Modern Plant Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 335.

BIO 340 Evolutionary Biology 4 Credits

Where did we come from? This course will explore the generation of biological diversity on earth. Course topics will include: the history of evolutionary thought; the different lines of evidence and fields of inquiry that bear on our understanding of evolution; selection vs. random changes in populations over time; speciation; extinction; the molecular basis of evolution; and evolutionary developmental biology. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265.

Corequisite(s): BIO 340L.

BIO 340L Evolutionary Biology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course. Corequisite(s): BIO 340.

BIO 350 General Ecology 4 Credits

An investigation of the processes that regulate the distribution of plants and animals throughout the biosphere. Relationships among species and their interactions with the environment are stressed. Quantitative analyses of experimental results and current research in basic and applied ecology are discussed. Laboratory activities explore conceptual models using both field activities and computer simulations. Three hours of lecture and one three-hour lab per week. One Saturday field trip (laboratory time will be adjusted accordingly). Prerequisite(s): Two of the following: ENV 100 with a grade of "B" or better; BIO 115, BIO 116, with a grade of "C" or better in each course.

Corequisite(s): BIO 350L.

BIO 350L General Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 350.

BIO 370 Immunology 4 Credits

An introduction to the cells and molecules of the immune system with emphasis on recent advances. Topics include AIDS, autoimmunity, transplantation, and cancer. Readings from current journals will be discussed and presented by students. The laboratory will introduce current research techniques and then apply these to a research problem with critical analyses of the data generated. Three hours of lecture and one three-hour lab per week. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 370L.

BIO 370L Immunology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 370.

BIO 372 Behavior of Marine Organisms: Evolutionary Approach 4 Credits

An examination of the underlying mechanisms and evolutionary causes of behavior, including habitat use, feeding, and mate choice, particularly in marine organisms. The laboratory will involve collecting, analyzing and interpreting field data and performing experiments in the lab using a variety of marine organisms including fish and crabs. Three hours of lecture and one three-hour lab per week. Some full-day field trips (usually on a weekend) are required. Prerequisite(s): BIO 115, BIO 116.

Corequisite(s): BIO 372L.

BIO 372L Beh Mar Org: Evol Apprch Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): BIO 372.

BIO 400 Seminar in Cellular and Molecular Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in cell and molecular biology. Topics may include: genomics, regulation of gene expression, development, and molecular processes of disease. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116, BIO 260, junior standing, and permission of instructor.

BIO 416 Bioinformatics 3 Credits

A comprehensive overview of relevant computer-based technologies used in genome research, DNA sequence analysis, and evolutionary biology. Will focus extensively on Internet resources and predictive algorithm usage for determining evolutionary relationships of organisms based on molecular evidence. Lectures will focus on terms and concepts frequently used in genomic and bioinformatic research, while computer labs will allow students to perform hands-on projects with actual DNA sequence data.

Prerequisite(s): BIO 115, BIO 116, BIO 260, BIO 265 (recommended); Junior standing or Permission of the Chairperson.

BIO 420 Seminar in Organismal Biology 3 Credits

Critical analysis of the scientific literature pertaining to current topics in physiology and organismal biology. Topics may include hormonal control of behavior, immune pathogen interactions, and other aspects of whole animal and/or plant biology. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 450 Seminar in Ecology & Evolution 3 Credits

Critical analysis of the scientific literature pertaining to current topics in ecology and evolutionary biology. Ecology and evolution of terrestrial and aquatic systems may include scales of adaptation, mechanisms, or human impacts. Three hours of lecture per week.

Prerequisite(s): BIO 115, BIO 116; junior standing, and permission of instructor.

BIO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

BIO 491 Internship in Biology 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations. These can include educational or research institutions. The method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and should include keeping a journal of activities, a term paper or project report and a poster presentation. 2.5 GPA required.

Prerequisite(s): Permission of the instructor.

CHE 100 Intro to College Chemistry 3 Credits

Open to all students, but designed primarily for those who wish to major in a science which requires chemistry but whose chemistry background is not sufficient to allow entrance into Chemistry 120. It focuses on the nomenclature used in chemistry including the symbols used to designate the chemical elements, the construction of chemical formulas, and the writing and balancing of chemical equations. Other topics will include interpreting the Periodic Table, the valences of the elements, the mole concept, and simple stoichiometry. In addition, chemical calculations involving units, scientific notation, significant figures, and the algebraic manipulations of simple equations will be included. Three hours of lecture per week. This course does not satisfy the requirements for the biochemistry or chemistry degree, but does satisfy the core requirements for liberal arts, education and business majors.

CHE 115 Chem and Contemporary Society 3 Credits

Designed to give the nonscientist an appreciation of the role of chemistry in today's world. The approach is conceptual rather than mathematical. Topics include basic principles of chemical theory, energy sources, elementary organic chemistry, drugs, food additives, polymers, chemistry of living systems, inorganic solids in modern technology, and problems involving pollution of the environment. Three hours of lecture per week. This course satisfies the core requirements for liberal arts, education and business majors.

CHE 118 Exploration of Chemical Prin 4 Credits

A one-semester introduction to the principles of chemical sciences. Students will utilize inquiry-based learning methods to examine contextual problems as a means to explore introductory models and concepts of chemistry. Students will also gain an understanding of how scientific models are used to explain experimental observations. The laboratory component of this course is designed to provide students with an experimental context within which to develop some of the models described in the classroom. Three hours of lecture and one three-hour lab per week.

CHE 118L Explor Chemical Prin Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 118.

CHE 120 Principles of Chemistry 3 Credits

For students who have successfully completed one year of high school chemistry. This systematic study of the fundamental principles and concepts of chemistry covers atomic structure, bonding, stoichiometric relationships, including solution and oxidation-reduction reactions, and molecular structure. Three hours of lecture per week. **Prerequisite(s):** High school chemistry or CHE 100 is recommended before taking this course.

Corequisite(s): CHE 121.

CHE 121 Principles of Chemistry Lab 1 Credits

For students concurrently taking CHE 120. Experiments involve gravimetric, volumetric, and spectrophotometric quantitative analysis. One three-hour lab per week. Fall.

CHE 122 Intro to Chemical Systems 3 Credits

A continuation of CHE 120. For students majoring in the sciences but may be taken by others. Chemical systems in which the study of kinetics, thermodynamics, equilibrium, and radiochemistry are emphasized. Three hours of lecture per week. **Prerequisite(s):** CHE 120, MTH 105 or higher.

Corequisite(s): CHE 123.

CHE 123 Quantitative Methods Lab 1 Credits

Usually taken concurrently with CHE 122. Primarily for students majoring in the sciences. A number of quantitative classical and instrumental methods of analysis are used to determine thermodynamic properties and reaction mechanisms. One three-hour lab per week. **Prerequisite(s):** CHE 121.

Corequisite(s): CHE 122.

CHE 211 Organic Chemistry I 4 Credits

The structure, chemical properties, and methods of preparation of the more important classes of carbon compounds are studied, with an emphasis on the relationship of structure, stereochemistry, and conformation to chemical reactivity. The preparation and reactivity of organic functional groups is introduced. The use of infrared and nuclear magnetic resonance spectroscopy, and mass spectrometry for elucidating structures of organic molecules is discussed. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** CHE 122, CHE 123.

Corequisite(s): CHE 211L.

CHE 211L Organic Chem I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 211.

CHE 214 Organic Chemistry II 4 Credits

A continuation of Chemistry 211, emphasizing the mechanism of organic reactions, structural interpretations of properties, preparations, reactivity and identification of organic compounds. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** CHE 211.

Corequisite(s): CHE 214L.

CHE 214L Organic Chemistry II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 214.

CHE 250 Quantitative Analysis and Statistics Methods 4 Credits

This course will provide a deeper exploration of topics in chemistry that are steeped in numerical analysis. These topics include advanced analysis of equilibrium systems, acid-base systems and electrochemical systems. Additional detail will be given to methods of chemical measurement, statistical methods of data analysis and determination of data validity and reliability. Both lecture and laboratory will show an emphasis on using computer-based tools to analyze experimental data. Three hours of lecture and one three-hour lab per week. **Prerequisite(s):** CHE 122, CHE 123, MTH 210.

Corequisite(s): CHE 250L.

CHE 250L Quantitative Analysis and Statistical Methods Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 250.

CHE 305 Physical Chemistry I 3 Credits

The mathematic and conceptual foundations of physical chemistry will be introduced with an over-arching theme of determination of energy allocation within atomic and molecular systems. Topics will include determination and measurement of energy states in atoms and molecules, simple quantum mechanical systems, distribution of energies and the connection to thermodynamic quantities, the three laws of thermodynamics, spontaneity, equilibrium and experimental kinetics.

Prerequisite(s): CHE 214, MTH 211, PHY 201.

CHE 306 Physical Chemistry II 3 Credits

Physical chemistry concepts are explored in more detail with emphasis on examination of systems that require multiple models in physical chemistry to explain. Topics will include, kinetic theory and transition state theory, statistical mechanics and its connections to thermodynamic functions, temperature dependence of spontaneity and equilibrium, the thermodynamics of condensed phases and multi-component equilibria, electrochemistry, multi-electron quantum mechanical systems, approximations in quantum mechanics, symmetry and advanced molecular spectroscopy.

Prerequisite(s): CHE 305, MTH 212.

CHE 315 Inorganic Chemistry 3 Credits

The periodic table as a tool for predicting the physical and chemical properties of chemical systems is developed and examined in conjunction with various theories of bonding, including valence bond, molecular orbital, valence shell electron repulsion, and ligand field theory. Emphasizes structure of crystalline solids, coordination compounds, reaction mechanisms, and structure-property relationships. Three hours of lecture per week.

Prerequisite(s): CHE 214.

CHE 316 Inorganic Chemistry Laboratory 1 Credits

Students will explore a variety of synthetic methodologies for the growth of inorganic molecular systems, and solid-state materials. A transition metal or main group metal plays a central structural role in all systems that will be examined. Modern analytical methods will be applied to characterize synthesis products, such as FT-IR spectroscopy, polarimetry, NMR, and powder X-ray diffraction analysis.

Prerequisite(s): CHE 315 or as corequisite.

CHE 320 Polymer Chemistry 3 Credits

Designed to acquaint students with the structure and properties of polymers, the contrast between small molecules and polymers, methods of measuring molecular weight, the mechanism of polymerization, and the methods of fabricating polymers.

Prerequisite(s): CHE 214, CHE 305 or CHE 306.

CHE 325 Physical Chemistry Laboratory 1 Credits

Measurements are made of physical properties of molecules and chemical dynamical processes. These measurements will be used to develop models which explain the physical chemical nature of the systems under examination. Experiments will utilize various instrumental techniques such as infrared spectrometry, nuclear magnetic resonance, fluorescence and UV/Vis spectrometry. One three-hour lab per week.

Prerequisite(s): CHE 250, CHE 305.

CHE 330 Instrumental Analysis Laboratory 2 Credits

This course is designed to give students practical experience using modern analytical instrumentation and to provide students with the background theory and principles of operation. The instrumental methods introduced in this course include: ultraviolet and visible spectroscopy, atomic emission spectroscopy, gas chromatography (GC), high performance liquid chromatography (HPLC), X-ray powder diffraction analysis and electrochemical analysis. This experimental laboratory course meets two times per week with three hours for each session. One session will be focused on instrumentation background theory and discussion and the other session will be experimental practice.

Prerequisite(s): CHE 214, CHE 250, PHY 201.

CHE 350 Advanced Organic Synthesis 2 Credits

The first of four experimental chemistry labs designed for chemistry majors. It presents the use of modern techniques, and instrumentation in organic chemistry, including distillation, chromatography, infrared, ultraviolet, nuclear magnetic spectroscopy, and mass spectrometry. Two three-hour labs per week.

Prerequisite(s): CHE 214.

CHE 375 Computational Chemistry Lab 2 Credits

This course will provide students with a means to explore various methods in computational chemistry. Basic computational methods will be developed from first principles and these methods will then be tested using various modeling and computational software packages. Methods will include, but are not limited to, molecular mechanics, semi-empirical molecular orbital calculations, ab initio methods, and density functional calculations. Students will be exposed to various computational software packages and the strengths and limitations of each methodology will be explored. The course will meet in a computer laboratory for two for three-hour lab periods a week.

Prerequisite(s): CHE 305.

CHE 400 Chemical Bonding 3 Credits

The effects of the chemical bond on the structure and properties of molecules are investigated. Molecular orbital theories of bonding are introduced. Emphasis is placed on group theoretical methods utilizing molecular symmetry to simplify the description of the electronic structure of molecules and to predict their geometric structures and reactivity.

Three hours of lecture per week.

Prerequisite(s): CHE 305, MTH 212.

CHE 415 Special Topics in Chemistry 3 Credits

An advanced level of one or more areas of modern chemistry. Emphasis on research and the literature of an area of current importance. Three hours of lecture per week.

CHE 420 Physical Organic Chemistry 4 Credits

In-depth studies of the methods for elucidating mechanisms of organic reactions for students who have completed one year of organic chemistry and physical chemistry. Topics include conformational analysis, linear free energy relationships, frontier molecular orbital theory, transition state theory, and chemical reaction kinetics. Isotopic scrambling, kinetic isotope effects, NMR and IR spectroscopy, polarimetry, and ultraviolet-visible spectrophotometry will be employed to investigate these concepts. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): CHE 214, CHE 305.

Corequisite(s): CHE 214L.

CHE 420L Physical Organic Chemistry Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): CHE 420.

CHE 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

CHE 491 Internship in Chemistry 1-4 Credits

A supervised research experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in a private, public, non-profit, or governmental organizations under the guidance of a mentor. The mentor and student will have regular consultation with the departmental internship coordinator to assess the student's progress. Normally, 50 hours of internship per credit is required. The grade for the course will be determined by the students' overall performance in their research work, a research paper documenting their work with their internship mentor and an oral or poster presentation at the end of the semester.

Prerequisite(s): 2.5 GPA and permission of the instructor.

ENV 100 Introduction to Environmental Sciences 4 Credits

Examines how ecosystems function, with emphasis on the interactions between biological organisms and their physical environment, and the chemical processes that govern these interactions. The impact of human populations on natural ecosystems is investigated in detail using case studies from history and current events. The laboratory provides for hands-on experiences and/or short field trips to local sites for a better understanding of many of the concepts discussed. Weekday and weekend field trips may be required. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 100L.

ENV 100L Introduction to Environmental Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 100.

ENV 200 Statistical and Computer Applications in the Natural Sciences 4 Credits

This course introduces important statistical concepts, their application, and the usage of computer technology relevant to biological, environmental, geological, and marine problems. Students will learn various graphical and statistical techniques and how to execute them on personal computers. The curriculum emphasizes the integrated nature of these techniques and their importance to meaningful data evaluation and representation. Laboratory exercises are designed to emphasize useful solutions to problems found in many scientific disciplines using computer-based methodologies. Three hours of lecture and one three-hour lab per week.

Corequisite(s): ENV 200L.

ENV 200L Statistical and Computer Applications in the Natural Sciences Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): ENV 200.

ENV 205 Introduction to Geographic Information Systems (also cross listed as GLS-205) 3 Credits

This course introduces the computer-based concepts and skills of Geographic Information Systems (GIS). It covers the basic GIS concepts, such as map characteristics and projections, spatial data models and analysis, and relational databases. It explores data sources, data quality, and metadata, as well as implementation and management of specific GIS projects. Hands-on experience with ArcGIS software is provided through a series of student exercises completed throughout the semester. Students will also be taught how to process both vector and raster data using ArcGIS software. The course is relevant for students from numerous disciplines in the natural sciences, social sciences, and business, which require the analysis and graphical representation of spatial data. Three hours of lecture per week. Note: This course is cross-listed as GLS 205. Students may not receive credit for both ENV 205 and GLS 205.

ENV 220 Weather and Climate Change 3 Credits

This course introduces students to the concepts of weather and climate change. These concepts frame a continuum from short-term or daily changes in the atmosphere (meteorology) to those changes averaged over much longer periods of time (climatology). Students will learn the fundamentals of weather forecasting, the causes of natural variation in the Earth's climate, and the impact of human actions on the Earth's climate. Connections will be drawn to other current issues in the Earth system, including land use change, biodiversity, and pollution. Three hours of lecture per week.

Prerequisite(s): GEO 100 or permission of instructor.

ENV 290 Directed Research and Study in Environmental Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the environmental sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in weekly meetings with the instructor, and communicating the findings by writing a final project report.

ENV 340 Environmental Field Methods and Data Analysis 3 Credits

This course will provide students with practical experience in field methods and data analyses within the environmental sciences. The course will include advanced activities incorporating field-based exercises, GIS analyses, statistical analyses, and database management. Students will also complete an independent project focused on a relevant topic. Local field trips during lab and on weekends may be required.

Prerequisite(s): MTH 105, GEO 100, GEO 102, and ENV 100; or Permission of Instructor.

ENV 350 Principles of Environmental Toxicology 3 Credits

A comprehensive description of the important principles of toxicology, including the absorption, distribution, metabolism, and excretion of toxic substances. Target organs systems will be discussed as well as mechanisms of carcinogenesis and teratogenesis. Specific groups of toxins to be discussed include: pesticides, metals, radiation, solvents and vapors, and plant and animal toxins. Three hours of lecture per week.

Prerequisite(s): BCH 225 or CHE 211, BIO 115 or BIO 117.

ENV 375 Environmental Biogeochemistry 3 Credits

This course examines the biogeochemical interactions among various environmental components, including water, rock, soil, organisms, and atmosphere. Covered topics focus on the relation between the biosphere and changes in the Earth's environment and atmosphere. The transfer of energy and nutrients within terrestrial ecosystems also is explored. Case studies from various examples will be used to understand ecosystem dynamics. Long-term environmental change and present-day ecosystem restoration activities are examined in the context of biotic offsets and land-use planning. The biogeochemical cycles of some environmentally sensitive compounds and elements in natural systems, such pesticides, mercury, and lead, also may be examined. Three hours of lecture per week.

Prerequisite(s): GEO 100 or GEO 113, CHE 120, CHE 121, CHE 122, CHE 123.

ENV 480 Senior Thesis 3 Credits

A senior thesis is optional for environmental science majors. However, a senior thesis is required for eligibility to graduate with honors in environmental science. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

ENV 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

ENV 491 Internship in Environmental Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

GEO 100 Earth Systems Science 3 Credits

Investigates the major global processes that occur on Earth. These processes can be grouped into four major systems: atmosphere, hydrosphere, lithosphere, and cosmosphere. Each system interacts with and affects the other systems creating, in a sense, a single Earth process. With this approach, the student will view the Earth as a whole, and understand that the many seemingly separate components that make up this planet are, in fact, a set of interacting processes, that operate in cycles through time, within a single global system. Three hours of lecture per week.

GEO 102 Earth Materials and Processes Lab 1 Credits

A hands-on laboratory experience involving the origin, significance, identification, and classification of Earth materials and processes. Mineral and rock specimens, soil and water samples, and topographic and geologic maps are utilized. Numerous field trips to local sites help students visualize many of the concepts discussed. One three-hour lab per week.

Prerequisite(s): concurrent enrollment in, or prior completion of, GEO 100 or GEO 113 is required.

GEO 113 Environmental Geology (also cross listed as GLS-113) 3 Credits

Examines the fundamental premise that "our society exists by geologic consent subject to change without notice" by studying a number of important geologic processes and cycles, and the hazards and/or resources they present to individuals, society, and the natural environment. Topics discussed include earthquakes, volcanism, stream flooding, coastal erosion, climate change, and water, soil, mineral, and energy resources. Cost/benefit considerations, hazard mitigation concepts, economic and political ramifications, and the interactions among the lithosphere, hydrosphere, atmosphere, and biosphere also are presented. The course is designed to give non-science majors a deeper appreciation of their connection to the surrounding geologic environment, leading to better, more informed business, political, policy, and personal decisions. Three hours of lecture per week. Note: This course is cross-listed as GLS 113. Students may not get credit for both GEO 113 and GLS 113.

GEO 168 Mesozoic Ruling Reptiles 3 Credits

A survey of the vertebrate groups that dominated the land (Dinosaurs), the seas (Mosasaurs, Plesiosaurs, Pliosaurus, Tylosaurus, and Ichthyosaurs) and the skies (Pterosaurs, Pterodactyls) during the Mesozoic Era. The course considers diversity of skeletal architectures and their reconstructed function and the often controversial, inferred anatomy, physiology, reproductive strategy, habit, and social behaviors of these animals that are different from mainstream reptiles, birds, and mammals. It also covers the paleogeographical, and paleoclimatological conditions that facilitated the evolutionary rise to dominance and diversification of these vertebrate groups and the debated causes of their eventual extinction. Three hours of lecture per week. Weekend field trips may be required.

GEO 201 Elements of Mineralogy 4 Credits

The physical properties, chemistry, atomic structure, crystallography, uses, and environmental impacts of important minerals of the lithosphere and biosphere are presented. In addition, lab assignments and exercises emphasize crystal symmetry and chemistry; polarizing microscope, ICP, and x-ray analytical techniques; the graphical display and interpretation of compositional data; optical properties of isotropic and uniaxial minerals; and the identification of mineral hand specimens. Three hours of lecture and one three-hour lab per week. At least one weekend field trip required. **Prerequisite(s):** GEO 100 or GEO 113, CHE 120, CHE 121 taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 201L.

GEO 201L Elements of Mineralogy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 201.

GEO 290 Directed Research and Study in Geosciences 1-4 Credits

Directed Research and Study in Geosciences will provide an opportunity for freshman and sophomore students to gain hands-on research experience in the geosciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

GEO 305 Petrology and Petrography 4 Credits

The origin, evolution, and terrestrial distribution of igneous and metamorphic rocks are presented and detailed. Classroom lectures and discussions emphasize rock geochemistry, mineralogic variability, the constraints placed on petrogenetic models by physio-chemical studies of natural and synthetic systems, and the relation of the various rock types to current plate tectonic theory and other whole-earth processes. The laboratory emphasizes the continuing development of optical microscopy skills, the identification of rock texture and mineralogy in thin section and hand specimen, the optical determination of mineral composition, and the recognition of possible petrogenetic processes as recorded in the rocks themselves. Three hours of lecture and one three-hour lab per week. Two weekend field trips required. Prerequisite(s): GEO 201, and CHE 122 and CHE 123 or taken prior or concurrently; or permission of instructor.

Corequisite(s): GEO 305L.

GEO 305L Petrology and Petrography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 305.

GEO 306 Sedimentology and Stratigraphy 4 Credits

The principles of weathering, erosion, transportation, and deposition of sediment are the focus of this course. Sediment characteristics are examined to identify the processes involved in transporting grains and the specific environment in which the grains were deposited. Students will learn how to collect, analyze, and interpret sedimentary data and how to interpret surface and subsurface stratigraphic data using various techniques, such as lithostratigraphic, biostratigraphic, and geophysical, correlations. Field trips will expose students to different sedimentary environments and provide opportunities for students to learn how to conduct fieldwork. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): GEO 100.

Corequisite(s): GEO 306L.

GEO 306L Sedimentology and Stratigraphy Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 306.

GEO 310 Structural Geology 4 Credits

The origin, distinguishing characteristics, and geographic distribution of deformational structures of the Earth's crust. In the laboratory, GPS, GIS, geologic maps, and three-dimensional problems are used in the study of typical surface and subsurface geologic problems. Three hours of lecture and one three-hour lab per week. Weekday and/or weekend field trips may be required. Prerequisite(s): GEO 100 or GEO 113, GEO 102.

Corequisite(s): GEO 310L.

GEO 310L Structural Geology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 310.

GEO 350 Soil and Surficial Processes 4 Credits

This course examines the physical, chemical, hydrological, and biological aspects of soil and their relation to geomorphologic development. Specific topics include descriptions of soil texture and structures, soil classification, soil colloids, soil redox and pH, and their effect on vadose zone water chemistry. Soil genesis and erosion controls, microbiology/ecology, nutrient cycles, and modern soil pollution from sludge and pesticide applications, as well as domestic and industrial chemical spills, also are discussed. The lab portion of the course introduces the basic techniques of soil analysis, both physical and chemical, and field survey methods. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, and GEO 102.

Corequisite(s): GEO 350L.

GEO 350L Soil and Surficial Processes Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 350.

GEO 407 Hydrology and Water Resources 4 Credits

This course introduces the principles that govern both surface water and groundwater flows that have applications to societal water needs. Surface water topics cover the basics of the hydrologic cycle, the processes of precipitation, evapotranspiration, runoff, and infiltration, and various factors affecting water supply and water quality issues in a modern watershed. Groundwater topics examine the principles that govern flow through a porous medium and the basics of well hydraulics under different pumping conditions that community development requires. Laboratory exercises will give students hands-on experience with the delineation of watersheds, analysis of precipitation data, and flow contaminant transport modeling. The field portion of the laboratory includes runoff and stream discharge measurements, as well as hydraulic conductivity estimations from both slug and pumping tests. Three hours of lecture and one three-hour lab per week. Prerequisite(s): GEO 100 or GEO 113, GEO 102, and MTH 105.

Corequisite(s): GEO 407L.

GEO 407L Hydrology and Water Resources Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): GEO 407.

GEO 480 Senior Thesis 3 Credits

A senior thesis is optional for geosciences majors. However, a senior thesis is required for eligibility to graduate with honors in geosciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the geosciences major and permission of instructor.

GEO 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

GEO 491 Internship in Geosciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 120 Oceanography 3 Credits

Investigates the interrelationships among the geological, chemical, physical, and biological aspects of oceanography. Topics include origin and evolution of ocean basins; physical characteristics of modern oceans; seawater chemistry; ocean and atmosphere interactions; ocean currents; waves and tides; coastal processes; biological productivity; and diversity, distribution and adaptations of marine organisms. Throughout the course, emphasis is placed on the processes that connect the seemingly separate topics to each other and to human life. Weekend field trips may be required. Three hours of lecture per week. Note: This course is cross-listed as GLS 120. Students may not get credit for both MAR 120 and GLS 120.

MAR 121 Introductory Oceanography Lab 1 Credits

Introduction to the fundamental aspects of geological, chemical, physical, and biological oceanography. Students learn through inquiry-based, hands-on exercises and activities using actual data collected in the lab and in the field. Independent projects and local field trips during lab and on weekends may be required. One three-hour lab per week.

Corequisite(s): MAR 120 or GLS 120 or as prerequisite(s).

MAR 210 Marine Life Through Time 4 Credits

Survey of the important developments in marine life over the last three billion years from the Pre-Cambrian evolution of one-celled organisms, through the Cambrian explosion of complex marine invertebrate life and subsequent diversification of backboned organisms in the Ordovician time, to the colonization of marginal marine and freshwater habitats in the Silurian-Devonian geological periods, and ultimately to extinctions during global crises of the late Devonian, Permian, Triassic, Cretaceous, and Pleistocene time intervals. The emphasis is on evolutionary adaptive breakthroughs within each phylum, particularly the significant morphological and anatomical innovations, and the subsequent radiation of these higher taxa into new habitats and niches through geologic time. Three hours of lecture and one three-hour lab per week.

Prerequisite(s): GEO 100 or GEO 113, GEO 102 or BIO 115 or permission of instructor.

MAR 210L Marine Life Through Time Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 210.

MAR 227 Introduction to Field Marine Science: Subtropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in subtropical environments, emphasizing shallow subtidal and intertidal environments such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include the diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a subtropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 228 Introduction to Field Marine Science: Boreal Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in boreal environments, emphasizing the rocky shallow subtidal and intertidal environments. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; day-night fluctuations in tide pool chemistry; plankton dynamics; predator-prey relationships; the physical processes and chemical properties of water; and comparisons of wave-exposed and wave-protected sides of a shoreline. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a boreal environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 229 Introduction to Field Marine Science: Tropical Environments 4 Credits

In this two-week field course, students will explore various topics in marine science through practical, hands-on, inquiry-based exercises and activities. The course will focus on the biological, geological, chemical, and physical processes that influence diverse marine flora and fauna found in tropical environments, emphasizing the shallow subtidal and intertidal environments, such as coral reefs, sandy beaches, turtle grass beds, rocky intertidal pools, and mangrove swamps. Examples of topics include diversity, abundance, size, zonation, and morphological adaptations of marine organisms; the composition and texture of sediments; and the physical processes and chemical properties of water. These topics will be examined using field team exercises, a group mapping project, and individual research projects. Activities will help students develop their skills in research, use of field and laboratory equipment, computer analysis of data, and scientific writing. The course is taught at an appropriate marine field station located in a tropical environment. Field portion of course is completed during the summer. Additional travel costs vary, depending on location.

Prerequisite(s): BIO 115 or BIO 116, and permission of instructor.

MAR 290 Directed Research and Study in Marine Sciences 1-4 Credits

Provides an opportunity for freshman and sophomore students to gain hands-on research experience in the marine sciences. This is an individual program of study and each student will work with a selected faculty member on a topic of mutual interest. The course consists of a combination of project meetings, supervised research, and guided readings. The focus will be on formulating research questions, designing and conducting experiments, collecting the necessary data, reviewing the scientific literature as it relates to each student's research topic in a weekly meetings with the instructor, and communicating the findings by writing a final project report.

MAR 325 Marine Vertebrates 4 Credits

A survey of the biology of marine vertebrate animals, including fish (jawless fish, sharks, rays, and bony fish), reptiles (sea turtles and sea snakes), sea birds, and mammals (manatees, seals, and whales). The evolution, physiology, natural history, ecological relationships, and human interactions of these groups are emphasized. Three hours of lecture and one three-hour lab per week. Field trips may be required. Prerequisite(s): BIO 272 and BIO 272L.

Corequisite(s): MAR 325L.

MAR 325L Marine Vertebrates Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 325.

MAR 330 Chemical Oceanography 4 Credits

Introduction to the chemical aspects of the oceans and their influence on marine ecosystems and Earth processes. Emphasis is placed on chemical and physical properties of seawater, atmosphere-ocean interactions, biogeochemical cycles with marine components, production and destruction of marine organic matter, chemical ecology, and marine pollution. During the lab portion of this course, students gain hands-on experience in analyzing ocean water samples, experimental design, and interpreting marine chemical data. Three hours of lecture and one three-hour lab per week. Weekend field trips and independent projects may be required. Prerequisite(s): CHE 120, CHE 121, MAR 120, and MAR 121; or permission of instructor.

Corequisite(s): MAR 330L.

MAR 330L Chemical Oceanography Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 330.

MAR 340 Marine Processes and Environments: Seminar 3 Credits

This course is designed as a seminar course. Therefore, students will learn to lead class discussions, to analyze and critique peer-reviewed journal articles, and to enhance their presentation skills. Students will interpret graphical, spatial, and numerical data to support their positions. Content will emphasize the interactions among marine processes, biological features, and geologic landforms.

Prerequisite(s): MAR 120 or GEO 100; GEO 306.

MAR 360 Plankton Ecology 4 Credits

Examines the diversity, physiology, and ecology of marine phytoplankton and zooplankton. Students will survey the dominant plankton groups, their distribution, nutritional requirements, growth kinetics, and behavior. Planktonic predator/prey interactions and food web dynamics will be discussed. Students will also examine the interdisciplinary nature and role of plankton in biogeochemical cycles. Three hours of lecture and one three-hour lab per week. Weekend field trips may be required. Prerequisite(s): MAR 120 and MAR 121; or BIO 116.

Corequisite(s): MAR 360L.

MAR 360L Plankton Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 360.

MAR 380 The Learning and Teaching of Marine Science 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

MAR 401 Marine Ecology 4 Credits

The purpose of this course is to introduce students to fundamental principles in ecology, as it relates to marine systems. Topics include the marine environment and its influence on the organisms living there; biodiversity and speciation; factors regulating population dynamics in marine systems; larval and fisheries ecology; species interactions such as predation, competition, and symbiosis; factors regulating productivity and energy flow in marine systems; and marine conservation. Hands-on laboratory exercises will provide students with the opportunity to design and conduct experiments related to marine ecology, and to collect, analyze, and interpret data from those experiments. Ecosystem modeling will also be introduced. Three hours of lecture and one three-hour lab per week. Weekend field trips may be introduced. Prerequisite(s): BIO 272, BIO 272L.

Corequisite(s): MAR 401L.

MAR 401L Marine Ecology Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): MAR 401.

MAR 410 Physical Oceanography 3 Credits

Introduction to the physical aspects and processes of the oceans and their influence on marine ecosystems and Earth processes. Topics include distribution of salinity and water temperature and their effect on water movement, the oceanic heat budget, atmospheric and oceanic interactions, ocean currents including surface and deep water circulation, waves, tides, and medium- to small-scale circulation features. Throughout the course, emphasis is placed on how these physical processes affect the biology and chemistry of the ocean. Three hours of lecture per week. Weekend field trips may be required.

Prerequisite(s): MAR 120.

MAR 480 Senior Thesis 3 Credits

A senior thesis is optional for marine sciences majors. However, a senior thesis is required for eligibility to graduate with honors in marine sciences. The topic for investigation will be chosen by the student in consultation with the faculty of the Department of Geological, Environmental, and Marine Sciences. The student must initiate consideration of a proposal to the Department. The proposal must contain a discussion of the proposed project and a timetable to be followed in the study. A departmental committee consisting of a major and minor advisor will evaluate the written paper submitted at the conclusion of the study or other approved venue. An oral presentation before the department at the conclusion of the semester in which the study is completed is required. Proposals must be submitted in final form no later than the end of the ninth week of the semester prior to the semester in which the study is undertaken.

Prerequisite(s): senior standing in the marine sciences major and permission of department chair.

MAR 490 Independent Research and Study 1-4 Credits

Immerses the student in field or laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

MAR 491 Internship in Marine Sciences 1-4 Credits

A supervised work experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placements may be in private, public, non-profit, or governmental organizations. These can include consulting firms, regulatory agencies, advocacy groups, and educational or research institutions. Normally, 50 hours of internship per credit is required. A mutually agreed upon method of evaluation will be formalized prior to the approval of the internship by the sponsoring faculty and could include a term paper or project report and a poster presentation.

Prerequisite(s): 2.5 GPA and permission of instructor.

MAR 580 Ind Marine Sci Field Study 4 Credits

This field-based course provides a practical experience in integrating marine science with pedagogical concepts. Students will use scientific methodology to explain marine ecosystems through specially designed, inquiry-based exercises. During these activities, students will address the process of applying college-level content to their own classroom settings, considering national and state standards. Hands-on, field-based exercises will provide experience with a diversity of marine habitats and the biological, geological, hydrological, and physical processes that influence them. Visited habitats can include rocky intertidal, salt marsh, tidal flat, beach and channel sand bars. As a result, students will develop field and laboratory skills in marine science and use them in designing materials for their own classroom use.

PHY 100 Principles of Physics I 3 Credits

Introductory noncalculus physics with applications for pre-professional, biology, and geological, environmental and marine sciences majors. Classical mechanics, energy, mechanical waves, fluid statics and dynamics, thermodynamics. Elements of modern physics are interwoven with those of classical physics from the beginning. Not open to chemistry, physics, or mathematics majors. Three hours of lecture per week. Prerequisite(s): MTH 105, MTH 210, MTH 211 or MTH 212.

Corequisite(s): PHY 100L.

PHY 100L Principles of Physics I Lab 1 Credits

For students concurrently taking PHY 100. One three-hour lab per week.

Corequisite(s): PHY 100.

PHY 101 Principles of Physics II 3 Credits

Continuation of Physics 100. Electrostatics, electricity, and magnetism; DC and AC circuits, physical and geometrical optics, introduction to elementary particle and quantum physics. Three hours of lecture per week. Prerequisite(s): PHY 100.

Corequisite(s): PHY 101L.

PHY 101L Principles of Physics II Lab 1 Credits

For students concurrently taking Physics 101. One three-hour lab per week.

Corequisite(s): PHY 101.

PHY 103 Science of Light and Color 3 Credits

An introduction to the science of light, color, and optics. Covers history of theories of light and vision, applications in art, photography, natural phenomena (rainbows, mirages, etc.), and modern technology, e.g., lasers and telecommunications. Many topics are illustrated by in-class demonstration experiments with lasers and other optical devices.

PHY 104 Energy, the Environment & Man 3 Credits

The many vital roles played by energy in the universe at large, on the earth, and in the activities of man are examined, including the basic sources of energy, the impact upon the environment due to these processes and possible future sources. A high school course in physics or chemistry is desirable but not necessary.

PHY 105 Matter, Forces, Energy: Explor'n 4 Credits

An introduction to the basic principles of physics focusing on the concepts of matter, force, and energy. The course will study, in depth, simple physical systems chosen to emphasize the interconnection of these three basic concepts. It will explore the behavior of these simple physical systems using directed group exercises coordinated with hands-on laboratory activities. One three-hour lecture and one three-hour lab per week.

PHY 105L Matter, Forces and Energy Lab 0 Credits**PHY 180 Astronomy 3 Credits**

Examines mankind's quest to understand the origin and form of the universe. Emphasis on the ideas of modern cosmology and their impact on our changing perception of our place in the universe, making use of information gleaned by simply looking at the night sky as well as post Apollo-era views of the solar system and the evolving universe as a whole.

PHY 200 General Physics I 4 Credits

Introductory classical physics; Newtonian mechanics, including the conservation laws, wave motion, gravity, thermodynamics. Three hours of lecture and one three-hour lab per week. Prerequisite(s): MTH 210 or as corequisite.

Corequisite(s): PHY 200L.

PHY 200L General Physics I Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PHY 200.

PHY 201 General Physics II 4 Credits

A continuation of the concepts developed in Physics 200. Electricity, electrical circuits, magnetism, Maxwell's equations. Light and optics, including lenses, interference, and diffraction. Three hours of lecture and one three-hour lab per week. Prerequisite(s): PHY 200, MTH 211 or concurrent enrollment.

Corequisite(s): PHY 201L.

PHY 201L General Physics II Lab 0 Credits

This lab is a co-requisite and must be taken with the corresponding course.

Corequisite(s): PHY 201.

PHY 203 Introduction to Modern Physics 3 Credits

Covers space-time relativity, elementary particles, and basic quantum mechanics, including solutions of the Schrodinger wave equation. Applications of quantum theory in atomic, nuclear, and solid-state physics.

Prerequisite(s): PHY 201 or permission of instructor.

PHY 250 Scientific Computing 3 Credits

Introduces students to modern techniques and applications of scientific computing. Students will learn to write code in python, a popular, modern programming language used by scientists and industry around the world. They will also retrieve and analyze large datasets using SQL, a standard database language. Students will develop their own software and learn to manage it online using github, an online code repository.

PHY 300 Mechanics 3 Credits

Kinematics and dynamics of particles and systems, analysis of harmonic oscillator systems, normal modes, Lagrangian and Hamiltonian dynamics and classical waves are studied.

Prerequisite(s): PHY 201, MTH 250.

PHY 305 Electricity and Magnetism 3 Credits

Electro- and magnetostatics, fields and potentials, and boundary value problems are covered.

Prerequisite(s): PHY 201, MTH 250.

PHY 310 Adv Electricity and Magnetism 3 Credits

Maxwell's equations; electromagnetic waves in vacuum and in material media; radiation, propagation, reflection, and refraction.

Prerequisite(s): PHY 305, MTH 308.

PHY 315 Thermodynamics/Stat Mechanics 3 Credits

Thermodynamic systems; the first and second laws of thermodynamics; entropy and thermodynamic potentials; distribution of molecular speeds; Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac distributions.

Prerequisite(s): PHY 201.

PHY 320 Quantum Mechanics 3 Credits

Historical background; the Bohr Theory; the Schrodinger equation, its interpretation and applications; the uncertainty and exclusion principles; development of the formalism.

Prerequisite(s): PHY 300.

PHY 330 Basic Electronics 3 Credits

An experimental study of devices and circuits in analog and digital electronics. No previous experience with electronic circuits is assumed; introductory topics including signal acquisition, computer interfaces, and analog/digital signal processing will be covered. One hour of lecture plus two three-hour labs per week.

Prerequisite(s): PHY 201 or permission of instructor.

PHY 350 Advanced Laboratory 2 Credits

Experiments in atomic and nuclear physics, electricity and magnetism, and physical optics. Students have the opportunity to work intensively on a particular experiment. Minimum of five to six hours per week.

PHY 400 Atomic Physics 3 Credits

Quantum mechanics and the one-electron atom; atomic structure and optical spectra of multi-electron atoms. Quantum statistics, band theory of solids.

Prerequisite(s): PHY 320.

PHY 405 Fundamentals Nuclear Physics 3 Credits

Nuclear mass and size; nuclear forces and some models of the nucleus; radioactivity and detection; subnuclear particles and resonances.

Prerequisite(s): PHY 320.

PHY 415 Physical Optics 3 Credits

Waves and the superposition principle; interference, Fraunhofer and Fresnel diffraction; electromagnetic nature of light; absorption and scattering; dispersion; polarization.

Prerequisite(s): PHY 201, MTH 250.

PHY 416 Modern Experimental Optics Lab 1 Credits

A laboratory course in geometrical and physical (wave) optics, designed to supplement the material presented in PHY 415. Serves as an introduction to the optical equipment and techniques that are employed in laboratory research. A series of experiments cover the topics of polarization, interference, image formation, Fourier optics and lasers, and optical spectroscopy.

Prerequisite(s): PHY 201.

PHY 450 Topics in Modern Physics 3 Credits

A selected topic of contemporary interest in physics, e.g., general relativity and gravity waves, is studied. Emphasis on current journal literature and research. May be taken more than once with departmental approval. An excellent introduction to independent research in one area of physics.

Prerequisite(s): PHY 201.

PHY 490 Independent Research and Study 1-4 Credits

Immerses the student in laboratory research. The student learns to organize material, use the literature, make precise measurements, and obtain reproducible data. If possible, the student will publish the results or present them at a scientific meeting.

PHY 491 Internship in Physics 1-4 Credits

A supervised research experience in an approved organization where qualified students gain real-world knowledge and utilize their academic training in a professional environment. Placement may be in private, public, non-profit, or governmental organizations under the guidance of a mentor. The mentor and student will have regular consultation with the departmental internship coordinator to assess the student's progress. Normally, 50 hours of internship per credit is required. The grade for the course will be determined by the student's overall performance in their research work, a research paper documenting their work with their internship mentor and an oral or poster presentation at the end of the semester.

Prerequisite(s): 2.5 GPA and permission of the instructor.

Mathematics

Program Overview

Students majoring in mathematics at Rider are met with rigorous and insightful instruction. Courses progress from foundational topics to advanced theories and techniques. Faculty members are active in research and will invite, stimulate and support students' curiosity and understanding.

Graduates of Rider's mathematics program go on to careers in such fields as education, scientific and medical research, engineering, computer science, architecture, pharmaceutical research and urban planning and development.

Curriculum Overview

Requirements for the math major total 50 semester hours and include calculus I, II and III, linear algebra, differential equations, advanced calculus, modern geometry, probability and statistical analysis I, modern algebra, complex analysis and mathematics electives. Also required are general physics I and II.

Honors Program in Mathematics

Superior students majoring in mathematics may participate in a program leading to graduation with honors in mathematics. A candidate must submit a written application by March 1 of the junior year to the departmental honors committee. Admission to the program will be based on a 3.25 cumulative average in mathematics courses taken in the first five semesters and sponsorship by a member of the departmental faculty. During the senior year, the student will be enrolled in MTH 490 Independent Research and Study. Honors in mathematics is based on earning a 3.4 average in seven mathematics courses at the 300 and 400 levels (excluding MTH 490) and an acceptable senior thesis. Further information on the program can be obtained from the department.

Degrees Offered

¹ For course placement information please visit this website (<http://www.rider.edu/offices-services/orientation/course-placement>).

² Please note that elective credits may be used to complete requirements in a second major or minor.

MTH 100S Math Skills Lab 1 Credits

The Math Skills Lab helps students master arithmetic and elementary algebra necessary for college level mathematics courses. Students in the College of Liberal Arts, Education, and Sciences who do not pass the Mathematics Placement Test are required to complete the Math Skills Lab successfully before enrolling in liberal arts mathematics courses. Students are required to attend regular class sessions. Students have access to tutors, computer-assisted instruction, and structured workshops. The one supplemental education unit does not count toward graduation; grading is done on a Y/Z (pass/not pass) basis.

MTH 102 Finite Mathematics 3 Credits

The course begins with consolidation of some basic topics including sets, number theory, real numbers, functions, and graphs. Statistics and probability theory are introduced with applications to the social and natural sciences. Throughout the course there will be an emphasis on formulating and solving familiar sorts of problems in mathematical terms.

Prerequisite(s): A mathematics SAT score of 550 or ACT score of 23, or a passing score on the Math Skills placement Test, or passing MTH 100S with grade of Y.

MTH 105 Algebra and Trigonometry 4 Credits

Algebraic functions, trigonometric functions, identities and conditional equations, inequalities, exponential and logarithmic functions.

Prerequisite(s): A mathematics SAT score of 600 or ACT score of 26, or a mathematics SAT score of 550 or ACT score of 23 and a passing score on the Algebra Section of the Math and Science Majors Placement test, or a score of 22 on the Math Skills placement Test and a passing score on the Algebra Section of the Math and Science Majors Placement test.

MTH 120 Intro to Applied Statistics 3 Credits

Collection and presentation of data. Measures of location and variation, sampling theory, hypothesis testing, confidence intervals, t-tests, chi-square tests, regression, and correlation. Emphasizes practical applications. Not open to business administration, chemistry, environmental, geosciences, marine sciences, math or liberal studies: marine ecological or environmental emphasis majors.

Prerequisite(s): MTH 102 or MTH 105.

MTH 150 Mathematics for Education Majors, I 3 Credits

This is the first course in a three-course sequence for elementary education majors. This course covers the concept of Numbers, starting with counting numbers, decimals, negative numbers, fractions, and real numbers; different ways of representing numbers, and the relations between them are explored; different meanings and applications of the arithmetic operations are studied; standard and non-standard algorithms for arithmetic are considered in light of the representation of numbers. May not be used by SLAS students to satisfy the mathematics component of the core. **Prerequisite(s):** A mathematics SAT score of 550 or ACT score of 23; A passing score on the Math Skills placement Test; or passing MTH 100S with grade of Y.

MTH 151 Mathematics for Education Majors II 3 Credits

This is the second course in a three-course sequence for elementary education majors. In this course, students will study proportional reasoning, Number Theory, Algebra, Geometry, and measurement. May not be used by SLAS students to satisfy the mathematics component of the core.

Prerequisite(s): MTH 150.

MTH 152 Mathematics for Education Majors III 3 Credits

This is the third course in a three-course sequence for elementary education majors. In this course, students will study area and volume, transformational geometry, statistics and probability.

Prerequisite(s): MTH 151.

MTH 210 Calculus I 4 Credits

Introduces analytic geometry, functions, limits, and derivatives; differentiation of algebraic and trigonometric functions, curve sketching, maxima and minima, and higher derivatives.

Prerequisite(s): A mathematics SAT score of 650 or ACT score of 29; or a mathematics SAT score of 550 or ACT score of 23 and a passing score on the Pre-Calculus Section of the Math and Science Majors Placement test; or a score of 22 on the Math Skills placement Test and a passing score on the Precalculus Section of the Math and Science Majors Placement test; or passing MTH 105.

MTH 211 Calculus II 4 Credits

The definite integral, differentiation of transcendental functions, methods of integration and approximate integration, determination of area, volume, and surface area.

Prerequisite(s): MTH 210.

MTH 212 Calculus III 4 Credits

Infinite series; functions of two and three variables, vectors and tangent planes, partial derivatives, multiple integrals, determination of volume and density.

Prerequisite(s): MTH 211.

MTH 230 Discrete Mathematics 4 Credits

An introduction to topics in Discrete Mathematics. This course covers methods of proof, induction and recursion, and other topics in discrete mathematics. Topics may include graph theory, trees, and symmetry groups.

Prerequisite(s): MTH 102, MTH 105 or MTH 210.

MTH 240 Linear Algebra 3 Credits

Systems of linear equations; vector spaces; linear independence; determinants; orthogonality; linear maps; eigenvectors.

Prerequisite(s): MTH 210 or as corequisite; sophomore standing; or permission of instructor.

MTH 250 Differential Equations 3 Credits

First order differential equations, separable and exact; integrating factors; second order linear differential equations; series solutions of second order linear differential equations; higher order equations; existence and uniqueness theorems; systems of linear differential equations.

Prerequisite(s): MTH 240, MTH 211.

Corequisite(s): MTH 212 or as prerequisite.

MTH 308 Advanced Calculus 3 Credits

Vectors, gradients, and directional derivatives, Lagrange multipliers, Taylor's theorem, multiple integrals, change of variables, line and surface integrals, Stokes' theorem.

Prerequisite(s): "B" average in MTH 210 and MTH 211; MTH 212, MTH 240.

MTH 315 Modern Geometry 3 Credits

Covers geometry from a modern point of view, with emphasis on non-Euclidean geometry, particularly projective geometry.

Prerequisite(s): MTH 211, MTH 240.

MTH 340 Probability & Stat Analysis I 3 Credits

Theory of sets and probability; discrete and continuous random variables and probability distributions. Emphasizes foundations and utilizes the techniques of the calculus.

Prerequisite(s): MTH 212 or MSD 111.

MTH 341 Probability & Stat Analysis II 3 Credits

Continuation of MTH 340. Foundations of mathematical statistics: normal distributions, estimation, confidence intervals and hypothesis testing; topics chosen from student's t- test, chi-square tests, analysis of variance and regression analysis. Emphasizes foundations and utilizes the techniques of the calculus.

Prerequisite: MTH 340. Spring.

MTH 401 Modern Algebra 3 Credits

Provides an introduction to modern abstract algebra. It emphasizes the axiomatic method to analyze the major algebraic systems. The instructor will choose the topics to be studied from among the following algebraic structures: integral domains, fields, complete ordered fields, groups, polynomials, rings, ideals and modules.

Prerequisite(s): MTH 240.

MTH 402 Topics in Advanced Mathematics 3 Credits

Chosen from advanced pure or applied mathematics. Topics vary, depending on instructor.

Prerequisite(s): MTH 308.

MTH 410 Complex Analysis 3 Credits

Analytic functions, conformal mapping, power series, Cauchy's theorem, calculus of residues.

Prerequisite(s): MTH 308.

MTH 420 Number Theory 3 Credits

Covers topics including divisibility theory, the prime numbers, the theories of congruences and of quadratic reciprocity, and Fermat's Last Theorem. Other topics may also include applications to cryptography, Pell's equations, continued fractions, and the theory of partitions.

Prerequisite(s): MTH 240 or permission of instructor.

MTH 430 Introduction to Topology 3 Credits

A comprehensive introduction to elementary topology. The concepts of topological spaces and metric spaces will be introduced. Connectedness, compactness and properties of subsets of the real numbers rooted in topology will also be considered. The quotient topology will be used to construct surfaces as identification spaces, and tools will be developed to distinguish one surface from another.

Prerequisite(s): MTH 212.

MTH 440 Real Analysis 3 Credits

Covers the theory of sets, the real number system and its properties, convergence of sequences and series of numbers and functions, and the theory of integration, including: measure theory, the Riemann integral, and introduction to the Lebesgue theory of integration.

Prerequisite(s): MTH 308 or as corequisite.

MTH 490 Independent Research and Study 1-4 Credits

Immerses the student in research and mathematical literature. If possible, the student will publish the results or present them at a scientific meeting.

Multicultural Studies

Program Overview

In this minor, students learn how different cultures interact to shape individual identities and to structure U.S. society. Because organizations today need employees who can perform effectively in a diverse workplace, the minor can also enhance employment options.

For coursework, each student chooses a theme or thread within multicultural studies that suits his or her special interests. The minor also provides students with career-relevant knowledge and experience.

In these various ways, the multicultural studies minor plays an important role in preparing Rider students, whatever their ethnic heritage, for an increasingly multicultural world.

Courses and Descriptions

MCS 110 Race, Class and Gender in Contemporary American Society 3 Credits

This interdisciplinary course analyzes the ways in which race, class, gender and ethnic relationships shape the experience of all persons in this society. It examines the categories of race, class and gender as social constructs that have been historically developed and sustained by economic, social, political, and cultural factors.

MCS 220 Issues in Multicultrl Studies 3 Credits

An examination of issues and questions posed by the existence of diversity in social life. Students build on what they have learned in MCS 110 by focusing in greater depth on selected aspects of multicultural interaction. Topics change each semester and are listed in the course roster. Recent topics include "Understanding Privilege," "The Meaning of Difference," and "Narratives of Human Difference: Science, Politics, Literature."

Prerequisite(s): MCS 110 or permission of instructor.

MCS 280 Directed Study in Multiculturl 1-4 Credits

An intensive study experience in multicultural studies. The student designs and carries out a course of focused study under the supervision of a multicultural studies faculty member. The student's proposed plan of work must be reviewed and approved by the faculty sponsor and by the multicultural studies advisory committee. May be repeated once for credit.

MCS 490 Independent Research and Study 1-4 Credits

Individual program of study under close supervision by the instructor, with weekly meetings and reports. Topics to be approved by the department. Available to seniors who have a minimum of a 3.0 GPA. No more than six credits allowed toward graduation.

MCS 491 Intrnshp in Mult Cultl Studies 1-4 Credits

A supervised community service of work experience at an approved site. Placements are made in accordance with each student's particular theme within multicultural studies. A minimum of three hours per week on site per credit (39 hours per semester); in addition, students complete readings and reports and meet weekly with the instructor. Primarily for multicultural studies minors in their junior or senior year.

Organizational Psychology

Overview

Are you interested in knowing what motivates a person to perform well at a job, or what qualities a company needs to look for to make a great hire? Today's businesses and organizations need professionals who understand human behavior, group dynamics and how to make the workplace function better. A major in Organizational Psychology from Rider University will help prepare you for a career in one of America's fastest-growing professions.

Curriculum Overview

Rider University's program is one of just a handful in the nation offering a unique interdisciplinary major that combines business and psychology. This versatile degree can have a real impact on an organization's bottom line by helping to improve employee satisfaction and job performance.

Majors in this program will gain a comprehensive understanding of the important contributions that organizational psychology plays in today's workplace.

The Organizational Psychology program focuses on the behavioral aspects of managing and supervising the human resources of an organization or business. You will learn the key concepts of management and psychology, including perception and attitudes, employee motivation and engagement, and organizational leadership and power — and gain an in-depth understanding of what makes employees and organizations function at their best.

As an Organizational Psychology major, you will:

- Develop a comprehensive understanding of human behavior in work settings
- Learn how to enhance performance within an organization or business
- Benefit from networking and gain real-world experience through internships and other professional opportunities

The U.S. Bureau of Labor Statistics ranks Industrial-Organizational Psychology at the top of its list of 20-fastest growing occupations, with a projected growth rate of 53 percent between now and 2022. Organizational psychologists are in demand because their expertise results in better hires, increased productivity, reduced turnover and lower labor costs. They can work as consultants to organizations, or serve in-house in a variety of jobs, including:

- Human resource officer
- Employee development manager
- Organizational development director
- Quality performance manager
- Organizational psychologist
- Testing specialist
- Compensation and benefits specialist

Honors Program in Psychology

A student may receive honors in psychology by fulfilling the following conditions beyond the basic requirements for the psychology major: complete one Independent Research and Study project (490); earn a cumulative average of 3.25 and an average of 3.5 in psychology at the time of graduation.

Degree Offered

- B.A. in Organizational Psychology

- ² Please note that elective credits may be used to complete requirements in a second major or minor.
- ³ The following courses fulfill the Psychology Elective requirement:
- PSY 215
 - PSY 225
 - PSY 315
 - PSY 400
 - PSY 490
- ⁴ Courses which fulfill the Core Requirements can be found at / undergraduate/colleges-schools/liberal-arts-sciences/school-liberal-arts-sciences/core-requirements/ (p. 454)

COM 253 Organizational Communication 3 Credits

Focuses on the ongoing communication processes in organizations. This course examines how and why organizations develop policies and procedures that both encourage and yet constrain creativity and autonomy in employees. It also introduces various management skills to balance the dynamic in organizations. Finally, the course introduces students to various communication technologies that enable communication processes in organizations. Students will also have opportunities to participate in creating organizational dynamics through role-playing exercises, case studies, and other kinds of experiential learning.

COM 290 Professional/Strategic Speech 3 Credits

Provides students with practical information necessary for effective communication in various business and professional settings. Covers communication processes, principles, and models in the modern organization. Class assignments are given with emphasis on developing a knowledge and practical understanding of informative, persuasive, and impromptu presentations. Limited to students enrolled in the College of Business Administration.

COM 350 Team & Group Communication 3 Credits

Examines the communication process as it relates to the small group. Theoretical constructs including motivation, group climate, attraction, leadership, decision making, problem solving and roles are analyzed. Utilizes group experience to study and evaluate the dynamics and effectiveness of interpersonal systems.

HRM 315 Employee Selection & Training 3 Credits

This course explains the processes involved in selecting and training employees. With regards to selection, specific examples include, evaluating applicant credentials, administering pre-employment tests and complying with equal employment opportunity legislation. With regards to training, topics include assessing the need for training, designing effective training programs, utilizing methods such as technology to deliver training, and evaluating the effectiveness of training programs.

Prerequisite(s): MGT 310.

HRM 316 Employee Compensation Systems 3 Credits

The goal of this course is to familiarize you with the common methods of compensation used by today's organizations and how these methods could be used to increase motivation, job satisfaction, and performance in the workplace. To accomplish this, we will first discuss the bases of motivation in the workplace. Next, we will then talk about the various compensation options and techniques and the strengths and weaknesses of each in maximizing motivation and performance in an organization.

Prerequisite(s): MGT 310.

HRM 333 Employee Engagement 3 Credits

Employee Engagement is commonly described as a focused passion and enthusiasm that employees bring to their work that produces high-quality performance and positive organizational outcomes such as enhanced firm reputation, customer loyalty, and profitability. In this course, students will explore the concept and value of Employee Engagement, and strategies for energizing an organization's workforce. Projects and activities will focus on the role of the Human Resource function in measuring employee attitudes, designing relevant interventions, and influencing a culture of engagement.

Prerequisite(s): MGT 310.

MGT 201 Fund Management & Org Behavior 3 Credits

This course deals with the fundamentals of organizational behavior as they relate to management such as motivation, communications, and leadership. Behavior is examined at the individual, group, and organizational level. The management functions of planning, organizing, leading and controlling are addressed. The effects of global operations and the requirements of ethical behavior on managers are also explored.

Prerequisite(s): minimum 30 credits completed.

MGT 310 Intro to Human Resource Mgmt 3 Credits

This course deals with the nature of human resource management, its functions, procedures, and practices currently found in profit, non-profit and public sector organizations. Topics covered include recruiting and selection, training, human resource development, equal employment opportunity, performance appraisal, diversity, job analysis, compensation, and employee rights and discipline.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 320 Managing Workforce Diversity 3 Credits

Demographic shifts, changing patterns of labor force participation, global competition, and a growing cultural emphasis on the celebration of difference have all contributed to the creation of diversity as a hot topic in management. This course explores the opportunities and challenges of the increasingly diverse workforce emerging in the United States today. We will address the knowledge and skills managers must develop in working with others who are different from themselves.

Some of these differences are obvious- gender, race, age, and physical characteristics. Other differences are not as easily observed - family structure, educational level, social class, and sexual orientation. This class incorporates experiential learning techniques for personal growth.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 355 Team Management 3 Credits

This course prepares students to work in organizations that use teams as an integral part of their functioning-an increasingly common practice. The class involves intensive group interaction, focusing on individual growth in group settings. Working with other students in role-plays, exercises, and team assignments allows the student to develop better communication and leadership skills.

Prerequisite(s): MGT 201 or permission of instructor.

MGT 490 Independent Research and Study 1-4 Credits

Topic to be approved in advance by supervising instructor, chairperson, and academic dean. Available for juniors and seniors. No more than 12 credits allowed toward graduation, and can be used as free elective or MGT major elective.

Prerequisite(s): MGT 201 or permission of instructor.

MSD 200 Statistical Methods I 3 Credits

This course is designed to give the student an understanding of continuous random variables, the elements of statistical inference, and an introduction to how these tools may be useful in one's attempt to reach intelligent conclusions in real-world settings. The focus is on the normal random variable, descriptive statistics, sampling distributions, and the frameworks of estimation and hypothesis testing, particularly as they apply to inference for unknown population means and proportions in the one- and two-sample settings.

Prerequisite(s): MSD 105 or equivalent.

MSD 201 Statistical Methods II 3 Credits

The sequel to Statistical Methods I is designed to prepare the student to be able to recognize a variety of additional common inferential scenarios, select and apply appropriate techniques in their analyses, and be aware of the usefulness of computer packages in performing certain relatively complicated statistical calculations. The course covers the one-way analysis of variance, Chi-square tests for non parametric inferences, and regression analysis. Students are expected to submit, for evaluation, the analysis of a real-world data set.

Prerequisite(s): MSD 200.

PSY 100 Introduction to Psychology 3 Credits

An orientation to psychology, covering major facts, principles and concepts about human and animal behavior and experience, research findings, major problems, basic vocabulary, methodologies, and contributions in the field. Topics include psychology as a science; human development; individual differences; intelligence and its measurement; special aptitudes and interests; personality and social behavior; motivation and emotion; frustration and personality deviations; and learning, thinking, remembering and forgetting.

PSY 105 Introduction to Research in Psychology 3 Credits

Students will be introduced to the basic research methods used in psychology including, surveys, experiments and observation. Students will collect data and learn to describe this data using basic tools of analysis including graphic display and statistical analysis. Students will read original psychological research and learn to write using the conventions of the American Psychological Association.

Prerequisite(s): a grade of "C" in PSY 100.

PSY 201 Statistics and Research Design 3 Credits

Introduces students to statistics and research methods in the behavioral sciences. Covers the fundamentals of descriptive and inferential statistics, a variety of issues in research design, selected research designs including the case study, correlational and experimental designs. In addition, students will explore the literature in psychology in order to examine the use of statistics and research design in real research problems.

Prerequisite(s): grade of "C" in PSY 105.

PSY 210 Organizational Psychology 3 Credits

Focuses on issues related to human behavior in work settings. Topics include personnel issues such as hiring and promotion decisions, performance appraisals, and methods of on-the-job training. Issues of job satisfaction, motivation, productivity, and effective leadership styles are also examined. Finally, organizational structure as it relates to communication within organizations will be examined.

Prerequisite(s): PSY 100.

PSY 215 Personality 3 Credits

A synthesis of the most recent research in the field of personality development. Topics include interplay of biological, cultural, and subjective personal processes; analysis of the broad trends in personality theories; and introduction to personality measurement.

Prerequisite(s): PSY 100.

PSY 225 Learning and Memory 3 Credits

A broad coverage of the expanding fields of learning, memory, and cognition is provided, while addressing their relevance and impact on human behavior. Continuity between early associationistic and contemporary cognitive theories is established. Topics range from basic conditioning to the more complex processes of memory, concept learning, thinking, and problem solving. **Prerequisite(s):** PSY 100.

PSY 240 Social Psychology 3 Credits

Deals with the scientific study of human beings in social situations, focusing on reciprocal influence of the individual and the group, especially aspects of behavior that are socially determined. The nature of attitudes: their development and change; the nature of social influence; interpersonal perception and attraction; dynamics of social behavior; and social phenomena, such as prejudice and social movements, are covered.

Prerequisite(s): PSY 100.

PSY 315 Psychological Tests 3 Credits

Examines the history of psychological testing. Issues concerning the construction of psychological tests are discussed, including concepts concerning reliability, validity, and item analysis. The rationale and structure of the major tests of intelligence, aptitude, and personality are reviewed, including the Rorschach, WAIS, TAT, MMPI, and Bender-Gestalt. In the last section of the course, students are given hands-on experience in the administration, scoring, and interpretation of a standard test battery.

Prerequisite(s): any statistics course.

PSY 329 Research Methods in Organizational Psychology 4 Credits

This course covers general area of research methods such as experimental and non-experimental methods, measurement, statistics, and preparation of reports for presentation and publication. In addition, research topics common in the area of organizational psychology such as worker motivation, job satisfaction, stress and burnout, communications in the workplace, productivity, decision-making, leadership style, and organizational structure will also be discussed. Students gain hands-on experience conducting empirical research.

PSY 329L Research Methods in Organizational Psychology 0 Credits

This course covers general area of research methods such as experimental and non-experimental methods, measurement, statistics, and preparation of reports for presentation and publication. In addition, research topics common in the area of organizational psychology such as worker motivation, job satisfaction, stress and burnout, communications in the workplace, productivity, decision-making, leadership style, and organizational structure will also be discussed. Students gain hands-on experience conducting empirical research.

PSY 400 Senior Seminar 3 Credits

This capstone course will provide a synthesis and evaluation of important critical issues in psychology, such as the role of modern psychology in solving social problems, the scientific vs. human services perspectives on behavior, emotion and cognition; and the nature of mental illness and well-being. Students will be expected to draw broadly from their education in psychology; to grapple with conflicting points of view; and produce professional quality writing, oral or multimedia presentations.

PSY 490 Independent Research and Study 1-4 Credits

Provides students with an opportunity to design and carry out original research in an area of their choice. Students designate a faculty supervisor and work closely with him/her during the semester. All students must have approval from the department and the dean to register for PSY 490.

Prerequisite(s): PSY 201.

Philosophy

Program Overview

The study of philosophy explores fundamental questions about persons and the universe. What is knowledge? What is the meaning of life? What

is reality? How do psychology, religion, art, history, and science contribute to an understanding of the world and our place in it?

At Rider, philosophy students are encouraged to apply these questions toward pragmatic ends, with emphasis on both the academic discourse community and developing specific skills useful beyond the classroom. Specifically, the program teaches students how to formulate and defend positions, speak articulately and listen objectively, write clearly and persuasively, read complex material with comprehension, summarize and organize challenging materials and reason analytically and inferentially.

Curriculum Overview

Students begin with introductory courses in the teachings of Plato and Aristotle, the basics of logic and language and an historical and systematic analysis of ethics. Later coursework can focus on particular movements of philosophy including Modern Philosophy, Asian philosophy, Existentialism, Nietzsche's concept of nihilism, the philosophies of Wittgenstein, Hume and Arendt, as well as a wide range of other courses related to the field. Most major classes are taught as small weekly meetings in which students discuss the material in an intimate, supportive setting.

Introductory philosophy courses also hold small weekly discussion groups. In both upper and lower - division courses, students are also given the opportunity to develop their ability to verbally express their opinions and argue their basic points persuasively. During their senior year, students hone their writing and rhetorical skills by completing a thesis on a philosophic topic of their choice in consultation with a faculty advisor.

Honors Program

Honors in philosophy may be achieved, upon the recommendation of the department, by earning a 3.5 cumulative average in the discipline and completing the senior thesis with distinction.

Academic Plan of Study

The following educational plan is provided as a sample only. Rider students who do not declare a major during their freshman year; who change their major; or those who transfer to Rider may follow a different plan to ensure a timely graduation. Each student, with guidance from his or her academic advisor, will develop a personalized educational plan.

Courses and Descriptions

PHL 100 Plato and Aristotle 3 Credits

The beginnings of Western scientific and humanistic thought among the early Greeks and their progress into the two great systems of Plato and Aristotle. Selections from Plato and Aristotle are read and discussed to determine the meaning and significance of philosophical ideas that have subsequently influenced the whole history of Western civilization.

PHL 102 Philosophical Thinking 3 Credits

An introduction to philosophical thought with an emphasis on the enduring questions and problems of philosophy. We will explore such questions as: how do I know I am not dreaming? Is there an external world? What is truth? Is there a self? Is there a God? What is the relationship between the mind and the body? How can I tell right from wrong? What makes government legitimate? What is justice? What is the meaning of life? We will consider answers to these questions from diverse philosophical traditions, reading such philosophers as Plato, Descartes, Zhuangzi, Hume, Vasubandhu, Berkeley, Aquinas, Avicenna, Udayana, Kant, Mill, Russell, Camus, and Nishitani.

PHL 110 Logic and Language 3 Credits

A study of the logical structure of argumentation in ordinary language, with an emphasis on the relation of logic to the uses of language in practical affairs. Traditional informal fallacies are studied as well. Discussions explore the nature of validity, truth, meaning, and evidence in relation to the evaluation of arguments.

PHL 115 Ethics 3 Credits

A combined historical and systematic analysis of the problems of ethics. Such problems as the nature and meaning of moral values and judgments, moral responsibility and freedom, conscience and happiness, the good life, and the relativity of value, are explored through the writings of such philosophers as Plato, Aristotle, Aquinas, Kant, Mill, and Nietzsche.

PHL 120 American Philosophy 3 Credits

The development of philosophical thought in the United States from the colonial era to the 20th century. Studies such thinkers as Edwards, Jefferson, Emerson, Thoreau, Peirce, James, Dewey, and King, and their ideas on human nature, free will, religion, morality, and politics.

PHL 125 Philosophies of Education 3 Credits

Studies classical and contemporary theories of the nature, structure, and aims of education, including major works of such philosophers as Plato, Rousseau, and Dewey. The course will also introduce students to methods of critical philosophical analysis.

PHL 130 Political Philosophy 3 Credits

An introduction to the problems of political philosophy with an emphasis on recent and contemporary issues, such as the conflict between liberal and conservative ideologies, fascism, revolution, civil disobedience, and the concept of legitimate political authority.

PHL 202 Social Philosophy 3 Credits

Emphasizes social ethics through critical studies of such contemporary problems as abortion, euthanasia, the death penalty, pornography and censorship, animal rights, drug use, sexual morality, environmental ethics, and world hunger.

PHL 203 Business Ethics 3 Credits

Surveys and examines ethical problems concerning the institutions and practices of contemporary business. Problems considered include: the conflicts of economic freedom and social responsibility; the relation of profits to work and alienation; the responsibilities of business to employees, minorities, consumers and the environment; the role of truthfulness in business practices; and the ethics of self-fulfillment and career ambitions. Readings selected from works of contemporary and historical philosophers, social theorists, and business people.

PHL 207 Asian Philosophy 3 Credits

A survey of the principal philosophical perspectives of Asia. Emphasis on the traditional Indian schools of Hinduism, Jainism, and Buddhism, Chinese Confucianism and Taoism, and the development of Zen Buddhism in China and Japan. Philosophical topics include: mystical experience, the ultimate nature of reality, the existence of a soul, the causes of human suffering, and the possibility of release, the nature of virtue and its development, and the nature of society and government.

PHL 210 Symbolic Logic 3 Credits

An introduction to logic from the standpoint of modern symbolic methods, including techniques of formal deductive proof, quantification, the logic of relations, and properties of formal deductive systems. Discussions focus on philosophical issues in recent and contemporary logical theory.

PHL 215 Environmental Ethics 3 Credits

A comprehensive introduction to environmental ethics that examines the major theoretical approaches, including anthropocentric (human-centered), zoocentric or sentientist (animal-centered), and biocentric or ecocentric (nature-centered) value systems, as well as the most important critiques of these ethical approaches. We will examine and analyze several classical ethical theories that are particularly relevant to a study of contemporary environmental controversies. We will also address specific issues such as biodiversity and wilderness preservation; human use of animals as food, entertainment, and research subjects; environmental racism and toxic dumping; sustainable development, population and consumption. Students will analyze and discuss the ethical dimensions of several contemporary environmental controversies.

PHL 225 Modern Philosophy 3 Credits

Examines one of the most exciting periods in the history of philosophy during which philosophers from Descartes to Kant tried to come to terms with the following questions: What is knowledge? Can we know the physical world exists? Can we have scientific knowledge? Can we know God exists? Can we even know whether we exist? The works of Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume and Kant are read and discussed.

PHL 226 Limits of Reason: 19th Century Philosophy 3 Credits

Studies the nature and meaning of reason, freedom, individuality, and society in the writings of philosophers such as Fichte, Hegel, Schopenhauer, Emerson, Thoreau, Comte, Mill, Spencer, Marx, and Nietzsche. Examination of the impact of such philosophies as the dialectical theory of history, transcendentalism, evolutionary theory, positivism, and existentialism on ideas about the nature and limits of human reason.

PHL 230 Philosophy of the Sexes 3 Credits
